The contents of this APPIC Directory and Policy Handbook appear in electronic form (www.appic.org) and represent the best efforts of APPIC to provide an up-to-date list of members and policies. However, due to changes in membership, policies, and the exigencies of reporting, APPIC cannot assure absolute accuracy of its Directory and Policy Handbook at any given moment. If questions regarding membership or policies require confirmation, please contact APPIC Central Office by email (appic@appic.org) or call (832)284.4080.

INTRODUCTION

The Association of Psychology Postdoctoral and Internship Centers (APPIC) is an educational, non-profit organization with the mission of enhancing internship and postdoctoral training programs in professional psychology. Members are independent agencies conducting or sponsoring internship or postdoctoral training programs, with over 800 programs represented. The Association of Psychology Internship Centers (APIC) was formed in 1968 to bring order to the process of internship selection by publishing a directory of programs and to begin the development of national intern selection procedures. In 1991, APIC changed its name to APPIC adding postdoctoral training programs. In 1999, APPIC developed the national computer match for internship placement and in 2000 developed the APPIC Application for Psychology Internships (AAPI). In 2011 APPIC moved their Central Office from Washington, DC to Houston, Texas.

APPIC Mission Statement

The Association of Psychology Postdoctoral and Internship Centers (APPIC) is committed to enhancing internship and postdoctoral training in professional psychology.

To accomplish this mission, APPIC:

1. Develops minimum standards for quality internship and post-doctoral training programs.
2. Facilitates the development of new internship and postdoctoral programs.
3. Develops selection policies and procedures to facilitate a fair and orderly process of matching applicants with internship programs.
4. Publishes a directory of internship and postdoctoral programs in professional psychology that meet APPIC membership standards.
5. Facilitates the placement of unmatched internship applicants through the APPIC Post Match Vacancy Service.
6. Promotes the discussion of relevant selection and training issues for interns and postdoctoral fellows.
7. Facilitates, through both formal and informal mechanisms, problem consultation for issues and problems that arise during selection or training of interns or fellows;
8. Develops relationships with professional associations committed to doctoral and postdoctoral training and other aspects of professional psychology;
9. Facilitates the exchange of information between doctoral programs and agencies offering internship and/or postdoctoral training in professional psychology;
10. Represents the views of internship and postdoctoral agencies to relevant groups and organizations in health service psychology.
11. Disseminates information on experiential training to members of the psychology community.
12. Encourages research in the areas of psychology training and supervision.

APPIC MEMBERSHIP

APPIC is not an accrediting agency. Programs that would like to include their membership in written materials may list their programs as “APPIC member,” but not as “APPIC accredited” or “APPIC approved.” APPIC membership indicates that a program meets all membership criteria and conforms to APPIC policies.

APPIC BOARD OF DIRECTORS

(Terms expire as noted by year after name)

Chair

Jason Williams, Psy.D. (2015)
The Children's Hospital
Denver, CO
Phone: 720-777-6152
Jason.williams@childrenscolorado.org

Vice Chair

Wayne Siegel, Ph.D., ABPP (2014)
Minneapolis VA Medical Center
Minneapolis, MN
Phone: 612-725-2000
wayne.siegel@va.gov

Past Chair

Arnold Abels, Ph.D. (2010)
UMKC Counseling Center
4825 Troost, Suite 206
Kansas City, MO 64110-2499
(816)235-1635
abelsa@umkc.edu

Treasurer

Marla Eby, Ph.D. (2014)
Cambridge Health Alliance/Harvard Medical
School
1493 Cambridge Street
Cambridge, MA 02139
(617)665-1470
eby@appic.org

Secretary

Jennifer Cornish, Ph.D., ABPP (2016)
University of Denver
2460 S. Vine Street, #206
Denver, CO 80208

APPIC WEBSITE

Since 1997, APPIC has offered a website (www.appic.org) on the World Wide Web as a service to members, psychologists, graduate students in professional psychology, peer associations, and the public. The APPIC website is available without restriction to anyone who has WWW access. The goals of the website are to create an efficient, professional information tool for psychologists, and to publish information quickly so that it is available to all that are interested – consistent with APPIC’s objectives as an association.

The website contains the following “pages” or sections:

ABOUT APPIC

Joining APPIC; Organizational Information; APPIC Policies; APPIC Mission Statement; Member and DPA Surveys; Postdoctoral; APPIC Membership Conferences; News

MATCH

About the Match; APPIC Match Phase II; Post Match Vacancy Service; Match Policies; MATCH-NEWS E-mail List; Match Statistics; National Matching Services Web Site;

DIRECTORY ONLINE

About the APPIC Directory; Stats & Other Directories; APPIC Directories (PDF Copies); Access the Directory Online; APPIC Member Directory Login

APPI ONLINE

APPI News and Information; APPI OnLine General Information; Transcript Submission; MyPsychTrack; Access APPI OnLine

EMAIL LISTS

Summary of APPIC’s E-Mail Lists; Choose a news list...; Choose a discussion list...

TRAINING RESOURCES

General Information; Resources

PROBLEM CONSULTATION

General Information – Problems; Informal Problem Consultation Form; Intern Exploitation

The APPIC website is used to publish the results of membership ballots (Board elections, Committee appointments, policy changes, revisions in membership criteria), membership alerts, survey results, and other fast-breaking news of interest to psychologists involved in doctoral and postdoctoral training in professional psychology. In addition, the website has APPIC membership application forms, information about the Match Program, and access to the APPIC Directory online. The information available on APPIC’s website will be the most up-to-date that APPIC has to offer.

Permission is granted to other websites with related interests to link to this URL: <http://www.appic.org>.

APPIC POST-MATCH VACANCY SERVICE

Since 1976, APPIC has offered a professional psychology internship placement "clearinghouse" that provides information about internship positions that are still available after APPIC Match Day which is now called the Post Match Vacancy Service (PMVS). Instructions for using the APPIC Post-Match Vacancy Service can be found on the APPIC web site (www.appic.org). APPIC added a Match II in addition to the computer match. Details regarding the APPIC Match and Match II can be found in the following sections.

Greg Keilin, Ph.D.
APPIC Post-Match Vacancy Service Coordinator
The University of Texas at Austin
E-mail: gkeilin@mail.utexas.edu
Phone: (512) 475-6949

APPLYING FOR MEMBERSHIP IN APPIC

Agencies sponsoring doctoral internship and/or postdoctoral training programs that are interested in joining APPIC should write to APPIC Central Office or access the application forms on the website (www.appic.org). The application fee is \$300 and must be received prior to committee review. Membership applications are submitted online and application fees must be received by Central Office by April 1 or September 1 of each year. Applicants must meet criteria listed in the policy section of this directory. Once approved, members receive all benefits listed for members below. Membership in APPIC is required for listing in the APPIC Directory. In addition, to be included in the Directory, APPIC policy requires that each member's listing is updated each year and dues and fees are in good standing or programs are subject to removal from the DoL. Directory updates are completed online by accessing the member page after accessing the Directory Online from the APPIC website. A program code and password will be included in acceptance materials sent to new members in order to access their member page on the Directory Online. In addition to the yearly update, APPIC members can update their Directory page online at any time. Programs that list information that is out of date or has not been updated are subject to removal from the APPIC Directory On Line.

APPIC PUBLICATIONS AND SERVICES

Universities and schools offering doctoral programs in psychology can become Doctoral Program Associates (DPA) with APPIC for \$275 per year plus a \$100 Match Fee. DPA programs have access to the *APPIC Newsletter*, and the program is offered access to DPA News email list. In addition, Directors of Clinical Training (DCTs) from APPIC Doctoral Program Associate sites whose students participate in the APPIC Match will receive notification directly from National Matching Services as to where their students have been matched. After 2017 only DPA programs that are APA or CPA accredited will be eligible to send their students to the APPIC match.

Students from Doctoral Program Associate sites receive a \$30 discount on the APPIC Directory Online fee due at the time of the Match (all students participating in the Match are required to pay a fee for the Match and the Directory Online).

An APPIC DPA form can be found on the APPIC website (www.appic.org) - click on the Joining APPIC link for more information.

APPIC DIRECTORY

APPIC Directory for several years is available in a PDF Format on the APPIC Web. To access the electronic file go to our web address www.appic.org.

Doctoral Program Associate application forms, and payments can be made online or checks should be sent to APPIC Central Office at the address listed below.

APPIC Central Office
17225 El Camino Real,
Suite 170
Houston, TX 77058
(832) 284-4080 Fax: (832) 284-4079

DIRECTORY INCLUSION CRITERIA

1. In order to be included in the Online or Print Directory dues must be paid by April 1st each year. Inclusion in the PDF Directory also requires that the Training Director, or his/her designate, update their program and user information by a designated date in the spring of each year.

2. Certain items of information are critical to applicants and/or are required by APPIC policies. These items are marked with an asterisk in the Directory Online update page. Member updates cannot be submitted for editor approval without entries in each of these required fields. Editor approval is required each year during a designated update period in the spring for the program updates to be included in the PDF Directory and to be viewed on the Directory Online.

3. A program's Training Director may make changes to its Directory OnLine listing at any time. Each Training Director is responsible for ensuring that the program's information listed in the APPIC Directory is accurate and up-to-date. APPIC takes no responsibility for inaccurate or outdated information or for information that has been incorrectly entered by the program. Programs are subject to removal from the Directory On Line if information is out of date or program dues have not been paid prior to April 1.

4. Each APPIC member is entitled to one listing in the Directory. Consortia or collaborative programs and single programs with separate tracks must designate a single Training Director and chief psychologist for their single Directory listing.

APPIC POLICIES

APPIC MEMBER POLICY

Adopted 1994

1. APPIC member programs conform to the basic ethical requirements of the profession as set forth in the current APA Ethical Principles for Psychologists.
2. APPIC member programs demonstrate high regard for human dignity. Dehumanizing practices or other restrictions on the exercise of civil and human rights in any part of the activities of APPIC members is unacceptable. As members of APPIC, training agencies have practices that are nondiscriminatory in regard to race/ethnic background, gender, age, sexual orientation, lifestyle, and disabilities.

APPIC MEMBERSHIP CRITERIA: DOCTORAL PSYCHOLOGY INTERNSHIP PROGRAMS (Criteria Revised May 2006; Clarification Revised June 2011)

INTRODUCTION

Internships that are accredited by the American Psychological Association or the Canadian Psychological Association are recognized as meeting APPIC doctoral membership criteria. All others must meet all of the following criteria (i.e., 1 through 16 below) and are reviewed for adherence to the criteria every three years. It is the program's responsibility to submit their updates in a timely manner and must receive approval for continuing membership with a formal review conducted at least every 3 years.

EDUCATIONAL NOTE: A program's adherence to APPIC membership criteria does not guarantee that the trainees in the program will meet individual state, provincial, or territorial licensing requirements.

CRITERIA AND CLARIFICATION (Criteria In Bold)

1. **A psychology internship is an organized training program which, in contrast to supervised experience or on-the-job training, is designed to provide the intern with a planned, programmed sequence of training experiences. The primary focus and purpose is assuring breadth and quality of training.**

Clarification:

The organization of an internship program is evident in a clear:

- a. statement of the goals and objectives of the training activities.
- b. description of the plan, location, and sequence of direct service experiences.
- c. description of the training curriculum; i.e., the content, duration, and frequency of the training activities.
- d. description of how the psychology training program is integrated into the larger organization.

For programs with multiple sites, the services rendered by interns, the supervision offered, and the training director's involvement is clearly described at each site.

2. **The internship agency has a clearly designated doctoral level staff psychologist who is responsible for the integrity and quality of the training program. This person is actively licensed, certified, or registered by the State Board of Examiners in the jurisdiction where the program exists, and is present at the training facility for a minimum of 20 hours a week.**

Clarification:

The internship is administered by a doctoral level licensed (certified or registered for independent practice) psychologist who:

- a. directs and organizes the training program and its resources.
- b. is responsible for selection of interns.
- c. monitors and evaluates the training program's goals and activities.
- d. documents and maintains interns' training records.

3. **The internship agency training staff consists of at least two full time equivalent doctoral level psychologists who serve as primary supervisors and who are actively licensed, certified, or registered as a psychologist by the Board of Examiners in the jurisdiction where the program exists.**

Clarification:

"Full time equivalent" typically refers to 40 hours/week. However, there may be a range of hours that qualify as "full time equivalent" depending on the norms of the program. 35 hours/week is the minimum that will qualify for "full time equivalent" for APPIC member

programs. "Full time" for interns could also be set at 35 hours/week if this meets licensure requirements in your jurisdiction. APPIC believes supervisor expectations should be similar to intern expectations.

It is expected that interns receive supervision during the year from at least two different supervisors. Interns' primary clinical supervision and role modeling must be provided by psychologists on the program's staff who are licensed (certified or registered) for independent practice at the doctoral level and who are:

- a. officially designated as psychology intern supervisors.
- b. significantly involved in the operation of the training program.

4. **Intern supervision is provided by staff members of the internship agency or by qualified affiliates of that agency who carry clinical responsibility for the cases being supervised. Regularly scheduled individual supervision is provided by one or more doctoral level licensed psychologists, at a ratio of no less than one hour of supervision for every 20 internship hours. Supervision is provided with the specific intent of dealing with psychological services rendered directly by the intern.**

Clarification:

Supervisors need to be clearly designated by the agency as clinically responsible for the cases (for example, countersigning documentation or having their name on the treatment plan or case summary). Depending on clinical needs, increased hours of supervision are expected. The required hours shall be through face-to-face individual supervision (rural sites may use visual telecommunication technology in unusual circumstances and when face-to-face supervision is impractical, but must demonstrate that such technology provides sufficient oversight). Programs shall adhere to all requirements of their state licensing boards.

5. **The internship provides training in a range of psychological assessment and intervention activities conducted directly with recipients of psychological services.**

Clarification:

Internship training in Psychology is primarily based on experiential learning which:

- a. provides psychological services directly to consumers in the form of psychological assessment, treatment, and consultation.

b. exposes interns to a variety of types of psychological services and consumers.

6. **At least 25% of trainees' time is in face-to-face psychological services to patients/clients.**

7. **The internship must provide at least two hours per week in didactic activities such as case conferences, seminars, in-service training, or grand rounds.**

Clarification:

The Psychology training program should have scheduled didactic experiences available to meet the training needs of their interns. Didactic activities refers to actual training opportunities and should include training activities beyond Intern Case Presentations.

8. **Internship training is at post-clerkship, post-practicum, and post-externship level, and precedes the granting of the doctoral degree.**

Clarification:

Interns must have completed adequate and appropriate prerequisite training prior to the internship. This would include both:

- a. completion of formal academic coursework at a degree-granting program in professional psychology (clinical, counseling, school), and
- b. closely supervised experiential training in professional psychology skills conducted in non-classroom settings.

9. **The internship agency has a minimum of two interns at the predoctoral level of training during any training year. These interns must be at least half-time (i.e., 20 hours per week). The minimum number of interns must be on site and in training at the time of the initial application for APPIC membership.**

Clarification:

The intention of this criterion is to allow opportunities for personal (face-to-face) interaction with peers in formal settings in the training program and on the training site during each training week. Part-time internships must ensure that intern schedules sufficiently overlap to allow substantial and meaningful peer contact.

10. **The internship level psychology trainees have a title such as "intern," "resident," "fellow," or other designation of trainee status.**

11. **The internship agency has a written statement or brochure which provides a clear description of the nature of the training program, including the goals and content of the internship and clear expectations for quantity and quality of the trainee's work. It is made available to prospective interns.**

Clarification:

Internship programs must make available descriptions of their training program which give their applicants and interns a clear understanding of the program in terms of:

- a. the program's training goals and objectives.
- b. the program's training methods, content, and curriculum (for example, required rotations, sample weekly schedules, or available training seminars).
- c. the program's training resources (e.g., training/supervisory staff, physical facilities and training equipment, clerical support, etc.)
- d. the sites at which training and services are provided. For programs with multiple sites, clear descriptions are given for each site of services rendered by interns, supervision offered, and involvement of the training director.

Clarification: APPIC must be notified in writing of substantive changes to the training program (personnel, placements, etc.) that have the potential to impact quality of training or which substantially alters the advertised training experience. The training program is likewise responsible for maintaining an up-to-date and accurate description of the program in the APPIC Directory.

12. **Internship programs have documented due process procedures that describe separately how programs deal with (1) concerns about intern performance, and (2) interns' concerns about training. These procedures include the steps of notice, hearing, and appeal, and are given to the interns at the beginning of the training period.**

Clarification:

Due process procedures describe how an agency deals with intern deficiencies and how the interns' handle grievances with the training program. The documentation would include:

- a. description of formal evaluation and complaint procedures.
- b. the program's and intern's responsibilities and rights in the process.
- c. the appeal process.
- d. description of procedures if interns have grievances about their training or supervision.

Programs need two written policies: (1) Due Process and (2) Grievance Process. The procedures must be specific to the internship training program; reliance on a more general HR policy is insufficient. Both procedures should be provided to interns at the commencement of training.

Due Process is a written procedure that comes into use when an intern's behavior is problematic. (The use of the term "impaired" is discouraged because if one identifies an intern by that term, legal issues having to do with the Americans with Disabilities Act (ADA) could be invoked.) Due process must include three elements: Notice (i.e. the intern must be notified that problematic behavior has been identified and that the internship is addressing the problem); Hearing (i.e. the program must have a formal process by which the identified problematic intern has an opportunity to hear concerns and to respond to the concerns); and Appeal (i.e. the intern must have an opportunity to appeal the actions taken by the program in regards to the identified problematic behavior. The appeal should extend at least one step beyond the Training Director).

A Grievance Procedure is a process that is invoked when an intern has a complaint against the training program. The procedure should include specific steps an intern takes in the complaint process and be broad enough to cover any and all complaints that may arise for interns (e.g. complaints about evaluations, supervision, stipends/salary, harassment, etc.)

13. **The internship experience (minimum 1500 hours) must be completed in no less than 9 months and no more than 24 months.**

Clarification:

Internships may be conducted on a full or part-time basis. Only School Psychology programs will be accepted for 9-10 month internships.

14. **APPIC member programs are required to issue a certificate of internship completion, which includes the word "Psychology," to all interns who have successfully completed the program.**

15. **At least twice a year the internship program conducts formal written evaluations of each trainee's performance.**

Clarification:

The written evaluation process provides comprehensive evaluative feedback to doctoral psychology interns as follows:

- a. The evaluation provides summary information of performance in all major competence areas that are a focus of internship training.
- b. Interns have the opportunity to review their evaluation with supervisors to ensure the fullest possible communication between supervisors and interns.
- c. Evaluation procedures provide feedback that validates trainees' achievements by noting areas of unusual strength and excellence and facilitate trainees' further growth by identifying areas that would benefit from additional training.
- d. The program provides the doctoral psychology intern's graduate training director with feedback concerning the intern's progress in the internship program.

16. **The program has the necessary financial resources to achieve its training goals and objectives. Intern stipends shall be reasonable, fair, and stated clearly in advance. Unfunded internship positions are allowable only in unusual and infrequent circumstances.**

Clarification:

APPIC requires internship positions to be equitably funded across the site. Intern stipends shall be set at a level that is representative and fair in relationship to the geographic location and clinical setting of the training site. Stipends should be reasonable based on a comparison with other APPIC member programs in your area. Unfunded or poorly funded internship positions are allowed only in unusual and infrequent circumstances in which the creation of such a position would serve to alleviate a hardship for the potential intern candidate. The "burden of evidence" lies with the program to demonstrate that the lack of funding does not adversely affect morale or quality of training. In addition, training resources should be sufficient to afford the same training for an unfunded or poorly funded position as for fully funded positions.

The payment of a stipend is a concrete acknowledgment that a trainee in the agency is valued and emphasizes that the primary task of the year is educational in nature. Stipends are generally lower than a salary received by a regular employee and implies that there is a significant training component in addition to experiential learning. Stipends are equal among trainees unless there is an extenuating circumstance (e.g., specialized skills, consortia agreements). This distinction between trainee and regular employee emphasizes

that an internship is "an organized training program, in contrast to supervised experience or on-the-job training."

**APPIC MEMBERSHIP CRITERIA:
POSTDOCTORAL TRAINING PROGRAMS**
(Criteria Revised May 2006; Clarification Revised June 2011)

INTRODUCTION

Postdoctoral training programs that are accredited by the American Psychological Association are recognized as meeting the APPIC Postdoctoral Membership criteria. All others must meet all of the following criteria (i.e., 1 through 14 below) and are reviewed for adherence to the criteria every three years.

EDUCATIONAL NOTE: A program's adherence to APPIC membership criteria does not guarantee that the trainees in the program will meet individual state, provincial, or territorial licensing requirements.

1. **A postdoctoral training program is an organized experience which, in contrast to on-the-job training, is designed to provide the Fellow with a planned, programmed sequence of supervised training experiences. The primary task is advanced training in an area of professional psychology.**

1. Clarification:

The organization of a postdoctoral program is evident in a clear:

- a. statement of the goals and objectives of the training activities.
- b. description of the training plan, location, and sequence of direct service experiences.
- c. description of the training curriculum: i.e., the content, duration, and frequency of the training activities.
- d. description of how the psychology training program is integrated into the larger organization.

For programs with multiple sites, the services rendered by the Fellow, the supervision provided, and the training director's involvement is clearly described for each site.

2. **The postdoctoral program has a designated psychologist who is clearly responsible for the integrity and quality of the training program, who has administrative authority commensurate with those responsibilities, and who is licensed as a psychologist in the jurisdiction where the program exists. This director has expertise in an area of postdoctoral training offered and has credentials of excellence such as the American Board of Professional Psychology diploma, status as a Fellow in APA or CPA, record of active research**

productivity, or clear evidence of professional competence and leadership.

Clarification:

The postdoctoral program is administered by a doctoral level licensed (certified or registered for independent practice) psychologist who:

- a. directs and organizes the training program and its resources.
 - b. is responsible for selection of Fellows.
 - c. monitors and evaluates the training program's goals and activities.
 - d. documents and maintains Fellows' training records.
3. **The sponsoring institution has two or more psychologists on staff who are currently licensed as psychologists in the jurisdiction in which the program exists. The postdoctoral program has a training faculty which includes at least one psychologist with expertise in each area of postdoctoral training offered and has credentials of excellence such as a Fellow in APA or CPA, record of active research productivity, or clear evidence of professional competence and leadership in that program focus area.**

Clarification:

Postdoctoral Fellows' primary clinical supervision and role modeling must be provided by psychologists licensed (certified or registered) for independent practice at the doctoral level on the program's staff who:

- a. are officially designated as postdoctoral program supervisors.
 - b. are significantly involved in the training program.
 - c. show evidence of expertise in the focus area(s) of the training program.
4. **The postdoctoral program includes a minimum of two hours per week of regularly scheduled, face-to-face individual supervision with the specific intent of supervising the psychological services rendered directly by the Fellow. This supervision is provided by staff members of the sponsoring institution who carry professional practice responsibility for the cases being supervised and are licensed as psychologists in the jurisdiction in which the program exists.**

Clarification:

Supervisors need to be clearly designated by the agency as professionally responsible for the cases (for example, countersigning documentation or having their name on the treatment plan or case summary). Two hours of regularly scheduled, face-to-face, individual supervision by a licensed psychologist should be provided weekly regardless of whether the postdoctoral program is one year full-time or two years half-time.

5. **In addition to individual supervision, the program includes at least two additional hours per week in learning activities, such as: case conferences**

involving cases in which the Fellow is actively involved; seminars dealing with clinical issues; co-therapy with a staff person, including discussion; group supervision; or additional individual supervision.

Clarification:

Above and beyond the two hours of individual supervision each Fellow receives weekly, the Postdoctoral Program should provide two hours per week of additional learning experiences, regardless of whether the program is one year full-time or two years half-time. These learning experiences should be regularly scheduled, and may include but are not limited to additional individual or group supervision, seminars, case conferences, workshops, or co-therapy with a supervisor. Clear descriptions of the learning activities should be provided.

6. At least 25% of the Fellow's time is in professional psychological services.

Clarification:

A minimum of 25% of the Fellow's time should be spent in provision of professional psychological services to patients/clients, students, consultees, and/or agencies. These services may include but are not limited to assessment, intervention, consultation, policy making, program design and implementation, provision of supervision, and clinical research.

7. Admission requirements include completion of all professional doctoral degree requirements from a regionally accredited institution of higher education or an APA/CPA-accredited program and predoctoral internship meeting APPIC standards. This is defined as having on the first day of the fellowship either the diploma in hand or a letter from the Director of graduate studies verifying the completion of all degree requirements pending institution graduation ceremony.

APA guidelines on specialty change are followed. Fellows having completed doctoral studies in fields other than clinical, counseling, or school psychology must have received a certificate of equivalency from an APA/CPA accredited university program attesting to their having met APA/CPA standards, including internship.

Clarification:

Postdoctoral Fellows must have completed the doctoral degree before beginning their postdoctoral training. At a minimum, Fellows must have completed all requirements for the doctoral degree from a regionally accredited institution of higher learning, including an internship meeting APPIC standards.

- a. If the Postdoctoral Training Program requires that Fellows possess a doctoral degree from an APA- or CPA-accredited program, it need not state the requirement that it be a regionally accredited institution of higher learning. In this case, the brochure should state that Fellows must have completed all doctoral degree requirements from an APA/CPA-accredited program.
- b. If the Postdoctoral Training Program requires that Fellows have completed an APA- or CPA-accredited internship, it need not state the requirement that

it meets APPIC standards. In this case, the brochure should state that Fellows must have completed an APA/CPA-accredited internship.

- c. If the Postdoctoral Training Program does not require completion of an APA- or CPA-accredited doctoral degree program or an APA- or CPA-accredited internship, the brochure should state that Fellows must have completed all professional doctoral degree requirements from a regionally accredited institution of higher education, including an internship meeting APPIC standards.
- d. If the Postdoctoral Training Program accepts applications from individuals who have previously received a doctoral degree in some area of psychology other than clinical, counseling or school, the brochure should state that such applicants must have received a certificate of equivalency from an APA/CPA accredited university program designed for the "retraining" of such psychologists, attesting to completion of all requirements, including an internship meeting APPIC standards.

8. **The postdoctoral agency has a minimum of one full-time equivalent postdoctoral Fellow at the postdoctoral level of training. This postdoctoral Fellow must be on site and in training at the time of initial application for APPIC Membership.**

Clarification:

The agency must have a minimum of one full-time Fellow or two half-time Fellows in training at the time of initial application for APPIC Membership, and should maintain this minimum for any period of training. In special circumstances, such as changes in funding or reorganization, the Postdoctoral Training Program may maintain APPIC Membership for up to one year without training Fellows, as long as the training program is otherwise in good standing.

9. **Postdoctoral trainees have a title, such as "Intern," "Resident," "Fellow," or other designation of trainee status.**

Clarification:

The title should indicate the Fellow is in training, and it is helpful if the title distinguishes the Fellow from other trainees, e.g., if the title "Intern," is used, then the full title should be "Postdoctoral Intern," to distinguish the Fellow from those completing a predoctoral internship.

10. **The sponsoring institution has a written statement or brochure made available to prospective Fellows which describes the goals and content of the program, program organization, entrance requirements, program faculty/staff, and mechanisms for Fellow evaluation.**

Clarification:

Postdoctoral training programs must make available descriptions of their training programs which give applicants and Fellows a clear understanding of the program in terms of:

- a. the program's training goals and objectives.

- b. the program's training methods, content, and curriculum, including rotations offered or required, seminars, supervision, and other training experiences.
- c. the program's training resources, including training/supervisory staff, physical facilities, training support.
- d. the sites at which training and services are provided. For programs with multiple sites, clear descriptions are given for each site of services rendered by Fellows, supervision offered, and involvement of the Director of Training.
- e. specific application requirements. Postdoctoral programs must clearly indicate that applicants must have completed all requirements for the doctoral degree before beginning their postdoctoral training, and that they must have received the doctoral degree from an APA/CPA-accredited program or from a "regionally accredited institution of higher education," including an APA/CPA-accredited internship or an internship "meeting APPIC standards," as described in Criteria #7.
- f. methods of Fellow evaluation, including the frequency of evaluation (a minimum of 2 written evaluations per year) and an indication of due process procedures in the event of a grievance.
- g. licensure requirements for postdoctoral supervised practice. Programs must indicate whether satisfactory completion of the postdoctoral training program meets postdoctoral supervised practice requirements for licensure or certification in the jurisdiction within which the program resides.

11. **Postdoctoral programs have documented due process procedures, including notice, hearing, and appeal for postdoctoral trainees. The procedures are given to postdoctoral trainees at the beginning of the postdoctoral training period.**

Clarification:

Due process procedures describe how an agency deals with postdoctoral fellows' deficiencies and how the postdoctoral fellows handle grievances with the training program. The documentation would include:

- a. a description of formal evaluation and complaint procedures.
- b. the program's and fellow's responsibilities and rights in the process.
- c. the appeal process.
- d. a description of procedures if fellows have grievances about their training or supervision.

Programs need two written policies: (1) Due Process and (2) Grievance Process. The procedures must be specific to the postdoctoral fellowship training program; reliance on a more general HR policy is insufficient. Both procedures should be provided to postdoctoral fellows at the commencement of training.

Due Process is a written procedure that comes into use when a postdoctoral fellow's behavior is problematic. (The use of the term "impaired" is discouraged because if one identifies a postdoctoral fellow by that term, legal issues having to do with the

Americans with Disabilities Act (ADA) could be invoked.) Due process must include three elements: Notice (i.e. the postdoctoral fellow must be notified that problematic behavior has been identified and that the postdoctoral fellow is addressing the problem); Hearing (i.e. the program must have a formal process by which the identified problematic postdoctoral fellow has an opportunity to hear concerns and to respond to the concerns); and Appeal (i.e. the postdoctoral fellow must have an opportunity to appeal the actions taken by the program in regards to the identified problematic behavior. The appeal should extend at least one step beyond the Training Director).

A Grievance Procedure is a process that is invoked when a postdoctoral fellow has a complaint against the training program. The procedure should include specific steps a postdoctoral fellow takes in the complaint process and be broad enough to cover any and all complaints that may arise for fellows (e.g. complaints about evaluations, supervision, stipends/salary, harassment, etc.).

12. **The postdoctoral training program (minimum 1500 hours) must be completed in no less than 9 months and no more than 24 months (two years half-time). Depending on the area and standards of specialty practice, a postdoctoral program may be more than one year.**

Clarification:

Postdoctoral training programs may be part-time or full-time experiences, and must be completed in not less than nine months, and not more than two years. Fellows must receive two hours per week of individual supervision and two hours per week of additional training activities as described in Criteria #4 and #5, regardless of their full-time or part-time status.

13. **A certificate of completion is granted upon fulfillment of the program requirements.**

Clarification:

The certificate should clearly indicate:

- a. the name of the institution, organization or agency.
- b. the postdoctoral nature of the training program.
- c. the focus area of the training program, if applicable.
- d. beginning and ending dates of the Fellow's training.

The Director of Training should sign the certificate.

Example: the XYZ University certifies that Jane Doe, Ph.D. has successfully completed a postdoctoral fellowship in Clinical Psychology from September 1, 2001 to August 31, 2002.

14. **The program has the necessary financial resources to achieve its training goals and objectives. Postdoctoral stipends shall be reasonable, fair, and stated clearly in advance. Unfunded postdoctoral positions are allowable only in unusual and infrequent circumstances.**

Clarification:

APPIC requires postdoctoral positions to be equitably funded across the site. Postdoctoral stipends shall be set at a level that is representative and fair in relationship to the geographic location and clinical setting of the training site. Stipends should be reasonable based on a comparison with other APPIC member programs in your area. Unfunded or poorly funded postdoctoral positions are allowed only in unusual and infrequent circumstances in which the creation of such a position would serve to alleviate a hardship for the potential postdoctoral candidate. The "burden of evidence" lies with the program to demonstrate that the lack of funding does not adversely affect morale or quality of training. In addition, training resources should be sufficient to afford the same training for an unfunded or poorly funded position as for fully funded positions.

The payment of a stipend is a concrete acknowledgment that a trainee in the agency is valued and emphasizes that the primary task of the year is educational in nature. Stipends are generally lower than a salary received by a regular employee and implies that there is a significant training component in addition to experiential learning. Stipends are equal among trainees unless there is an extenuating circumstance (e.g., specialized skills, consortia agreements). This distinction between trainee and regular employee emphasizes that a postdoctoral fellowship is "an organized training program, in contrast to supervised experience or on-the-job training."

APPIC MEMBERSHIP CRITERIA: CONSORTIA

Criteria Revised September, 2000
Clarification Revised January, 2008

In addition to meeting the APPIC membership criteria for Doctoral Psychology Internship Programs or Postdoctoral Training Programs, consortia programs must demonstrate evidence of the following:

1. **A primary consortium director or co-directors must be present at one or more of the training facilities for at least 20 hours a week.**

Clarification:

The program is administered by a doctoral level licensed (certified or registered) for independent practice psychologist or psychologists who:

1. must be at one facility at least 20 hrs./week and can be at additional facilities for additional hours beyond the 20 hours spent at the first facility.
 2. coordinates and organizes the consortium-wide training program and its resources.
 3. coordinates the selection of interns or post-doctoral residents.
 4. monitors and evaluates the training program's goals and activities.
 5. oversees the documentation and maintenance of interns' or post-doctoral residents' training records.
2. **Each agency or site has at least one clearly designated, appropriately credentialed doctoral level staff psychologist who is responsible for the integrity and quality of training and present at the agency/site for a minimum of 20 hours per week.**

Clarification:

At each site there is a doctoral level licensed (certified or registered) for independent practice psychologist who:

1. directs and organizes the training program and its resources at that site.
 2. is involved in the selection of interns and/or post-doctoral residents.
 3. monitors and evaluates the training program's goals and activities at that site.
 4. is responsible for documenting and maintaining interns' and/or post-doctoral residents' training records at that site.
 5. regularly participates in the consortium wide training faculty/staff meetings.
3. **Regularly scheduled consortium-wide activities, including formal, didactic face-to-face contact among trainees at least monthly; ongoing informal contact among trainees across sites; and structured faculty meetings at least quarterly.**

Clarification:

The Psychology training program should have scheduled didactic experiences available to meet the training needs of their interns and/or post-doctoral residents.

- a. Provide a schedule of face-to-face contacts when all the interns or post-doctoral residents are together including dates, hours, topics covered, and presenters.
- b. Describe opportunities for ongoing informal contact among trainees (e.g., listserv, scheduled lunches).
- c. At least quarterly training faculty/staff meetings, where faculty discuss issues related to the overall program, interns'/post-doctoral residents' performance and program evaluation.

4. **A formal plan outlining the didactic activities and procedures provided in the training program.**

Clarification:

A description of the complete training program for each site must be provided.

- a. Please refer to Clarification #3a for Consortia programs above as well as Item #1 for Doctoral Criteria and Item #1 for Post-Doctoral Criteria.
- b. Information should be provided for all training that is provided throughout the consortia, as well as all training that is provided specific to each site.
- c. If this information is already well documented elsewhere, please reference to those sections of the report.

5. **Assurance of trainee contact with more than one supervisor.**

Clarification:

Interns' primary clinical supervision and role modeling must be provided by two or more psychologists licensed (certified or registered) for independent practice at the doctoral level within the consortium who are:

- a. officially designated as psychology intern or post-doctoral resident supervisors.
- b. significantly involved in the operation of the training program.

6. **A written consortia contractual agreement delineating:**

- o **the nature and characteristics of the participating entities;**
- o **the rationale for the consortial partnership;**
- o **each partner's commitment to the training/education program, its philosophy, model, and goals;**

- **each partner's obligations regarding contributions and access to resources;**
- **each partner's adherence to central control and coordination of the training program;**
- **each partner's commitment to uniform administration and implementation of the program's training principles, policies, and procedures addressing trainee/student admission, financial support, training resource access, potential performance expectations, and evaluations (Guidelines and Principles for Accreditation of Programs in Professional Psychology; Committee on Accreditation of the American Psychological Association); and**
- **due process procedures including notice, hearing and appeal.**

Clarification:

This document should be signed and dated by an individual with administrative authority (such as Director, Executive Director, Director of Finance, or Department Chair) from each of the agencies within the consortia. It is advisable that the Director of Training of the consortia internship training program also sign the agreement.

- h. The documentation should clarify the length and duration of the contract, as well as the renewal process.
- i. This document should be binding for at least the duration of the internship/post-doc program training year.
- j. This document should be reviewed annually by the training faculty.
- k. Due process procedures describe how each agency within the consortia deals with problematic intern performance issues and how the interns' grievances with the training program are handled. The documentation would include:
 - the formal evaluation and complaint procedures;
 - the program's and intern's responsibilities and rights in the process;
 - the appeal process;
 - procedures if interns have grievances about their training or supervision.
- l. Consortia member sites should document that these due process procedures have been reviewed in their consortia-wide training faculty/staff meetings. The training faculty/staff should determine the compatibility of their procedures. Given the constraints of each site, where possible procedures should be made comparable.
- m. Please describe how you will inform APPIC within one month that there have been significant changes in any aspect of the program outlined above (e.g. leadership, site membership).

Guidelines for Development of Consortia

Revised July 2, 2003

Preface: What is a Consortium?

A consortium is comprised of multiple (more than one) independent agencies that have joined together to offer a well-rounded, unified psychology training program. A formal written agreement among the agencies in which lines of responsibility and financial commitments are delineated creates the consortium. The trainees (a) physically work at the multiple sites (or some combination thereof), and/or (b) obtain training from one primary site with some experience at or exposure to aspects of the other setting(s) that their primary site does not offer. Agencies within a consortium complement each other rather than duplicate strengths and weaknesses.

1. What is the purpose or rationale for a consortium? How can that purpose be assured?

The purpose of a consortium is to pool the resources of more than one site to enhance and ensure the quality of training provided to interns and/or postdoctoral fellows. Consortia agencies each have a unique training objective that, when combined with other sites in a consortium, enhance and complement the overall mission of the consortium. In some cases, isolated agencies within a consortium cannot meet certain APPIC criteria for an internship or postdoctoral fellowship (e.g., they lack breadth of training experiences or resources to fund more than one trainee or licensed psychologist, etc.), but are able to contribute to a comprehensive training program when various types of resources are combined.

Together (but perhaps not independently), the sites are able to meet APPIC requirements, which include:

- provide breadth of training experiences;
- increase exposure to a variety of service delivery options;
- maximize trainees' exposure to a range of theoretical and professional orientations;
- enhance trainees' experiences with diverse populations;
- increase exposure to broad-based and diverse professional resources; and
- provide efficient mechanism for ensuring trainee interaction and collegiality.

Trainee refers to a psychology intern and/or postdoctoral fellow.

2. When should a program be considered a consortium or several independent sites?

Consortia should have a clearly articulated mission that can only be met by a consortial arrangement and a unified perspective on training. Regular, ongoing communication and direct interaction should occur among licensed psychologists serving as training directors at each site. The purposes of these communications are to (a) monitor training needs and remain responsive to training issues as they arise, (b) ensure adequacy of individual sites at providing quality training experiences, and (c) consider means by which needs unique to the consortium can be met.

- Regular, ongoing, meaningful formal and informal communication and direct interaction occurs among trainees in a consortium (and may not occur among independent sites). Trainee meetings occurring at least monthly are recommended.
- Resources are shared among agencies to benefit trainees and the overall training program, such as staff expertise, research opportunities, university privileges, journal libraries, in-services, and unique supervision opportunities.

3. What are the criteria needed for a consortia?

Please refer to the Consortia Guidelines and Clarification Document for the answer to this question.

4. Can a site be both free standing and part of a consortia? Or must it be one or the other?

Consortia sites must make a commitment to one model of training (i.e., they cannot be a free-standing internship or postdoctoral fellowship and a member of a consortium). This ensures that adequate attention to important and unique consortia issues remain focal to all agencies within the arrangement, and minimize internal competition for trainees, role and responsibility confusion among participants, and other sources of potential conflict of interest.

5. If an established consortium accepts a new member into the consortium, what impact does that have on their APPIC membership?

Consortia should have the flexibility and ability to add new members (or omit existing members) when necessary to sustain their mission. New applicant agencies should apply directly to the consortium, which should have established membership criteria consistent with their mission statement and in compliance with APPIC criteria. The consortium must notify APPIC in writing within 30 days of adding a new member to the consortium, omitting a current member, or other major change. Documentation should also include changes to the APPIC application face sheet, revised tables (A, B,C), and a new signed and dated consortium agreement. The change will be reviewed by the APPIC Internship Membership Review Committee or Postdoctoral Review Committee to insure ongoing adherence to the Membership criteria.

The Committees reviewing the materials will then decide whether the change(s) warrants having the consortium reviewed at an earlier date than the normal, formal three-year review cycle for non-APA accredited programs. Consortium programs maintain their APPIC Membership during the review process. Only non-APA/CPA accredited programs need to have a formal review.

New applicant agencies should submit a formal request for consideration that includes a clear description of:

- the goals and objectives of the training activities;
- the plan, location, and sequence of direct service experiences;
- the training curriculum; i.e., the content, duration, and frequency of the training activities;
- a supervision plan, including the person responsible, number of hours devoted to supervision per week, and on-going availability of the supervisor; and

- how the psychology training program is integrated into the larger organization.

Agencies should be added to the consortium based on careful and thoughtful consideration of variables such as:

- How the applicant agency contributes to the unique mission of the consortium -- for example, does it offer experiences:
 - that are not otherwise available in the consortium (e.g., a diverse population or clientele); and/or
 - in a setting or area that presents unique service-delivery needs (e.g., rural locale)?
- Does the agency agree to the requirements of the consortium -- for example,
 - supervisors' representation at board meetings (if applicable);
 - trainees' attendance at regularly scheduled consortium meetings;
 - continuous annual selection and hiring of trainees, with no more than one year on inactive status; and/or
 - other consortium procedures and practices deemed necessary to maintain ongoing APPIC membership?

Sites that are added to existing APPIC-member consortia may not represent themselves as an independent APPIC member. Further, consortia members are listed only once in the APPIC Membership Directory; each agency is not listed separately.

For new member applicants, independent membership in APPIC is wholly and completely contingent upon successful review by the APPIC Doctoral Membership Committee or the APPIC Postdoctoral Membership and Review Committee.

If a site existing within an existing APPIC member consortia wishes to apply for independent membership, it can retain its status in the consortium while its application is being considered. If approved as an APPIC member, the site must resign from the consortium (i.e., it cannot be an independent member and part of a consortium simultaneously).

If two or more sites within an existing APPIC-member consortium wish to leave and create a new consortium, they will be reviewed as new member applicants and must submit all materials that would be required from a first time applicant. Their application would be reviewed by the APPIC Doctoral Membership Committee, or by the APPIC Postdoctoral Membership and Review Committee. Their prior status as APPIC members based on their relationship within a consortium is not sufficient to warrant continued membership status.

6. Do consortia internship programs have different needs from single site programs with regard to the APPIC Match?

Some consortia do have relatively complex needs for the internship selection process. However, the APPIC Match has a number of features that provide consortia with considerable flexibility in selecting interns. For example, a consortium can specify that it has multiple "programs" (e.g., rotations, training opportunities, sites) in the Match, which allows the Training Director to submit separate ranking lists for each program, and allows applicants to rank each program at the consortia according to their preferences. The instructions from National Matching Services (NMS) provide extensive information about these options, and the APPIC Match Coordinator and NMS are available for consultation as needed.

APPIC MATCH POLICIES: 2013-2014

Adopted July 28, 2013

The following policies will guide the 2014 APPIC Match and Post-Match Vacancy Service. Adherence to these policies is a condition of membership in APPIC and of participation in the APPIC Match and/or Post-Match Vacancy Service.

Phase I of the Match

- The Rank Order List Submission Deadline is February 5, 2014 at 11:59 p.m. Eastern Time.
- Results of the Match will be released on APPIC Phase I Match Day, February 21, 2014.

Phase II of the Match

- The application deadline (see Policy 3b) is February 27, 2014 at 11:00 a.m. Eastern Time.
- The Rank Order List Submission Deadline is March 17, 2014 at 11:59 p.m. Eastern Time.
- Results of the Match will be released on APPIC Phase II Match Day, March 24, 2014.

- 1. These policies apply to all participants in the APPIC Match and Post-Match Vacancy Service, including APPIC member internship programs, non-APPIC member internship programs, and student applicants and their doctoral program faculty.**
 - a. All participants shall abide by their agreements with APPIC for participation in the APPIC Match.
 - b. Internship training directors must ensure that all people involved in recruiting or selecting interns understand and adhere to these policies.
 - c. Directors of APPIC Doctoral Program Associates and other doctoral programs with students participating in the APPIC Match must ensure that their students understand and adhere to these policies.
 - d. Violations of APPIC Match Policies or Match Agreements by applicants or programs may result in sanctions by APPIC (e.g., being barred from future Matches) or legal action by other Match participants. In addition, violations by applicants may result in disciplinary action by the applicants' graduate and/or internship programs.
- 2. Internship programs must offer all of their internship positions in Phase I of the APPIC Match.**
 - a. Positions for which funding is not assured should not be offered in the Match.
 - b. Positions that are left unfilled in Phase I of the Match must be offered in Phase II of the Match, in accordance with paragraph 8 and its subparagraphs below.
 - c. Positions that are not offered in Phase I of the Match, such as positions for which funding becomes assured after the Phase I Rank Order List deadline or newly created positions, may be offered in Phase II of the Match, in accordance with paragraph 8 and its subparagraphs below.
 - d. Positions that are not offered in Phase I or Phase II of the Match can be communicated and/or offered to applicants only after the results of Phase II of the Match are released, in accordance with paragraph 9 and its subparagraphs below.

- 3. For both Phase I and Phase II of the APPIC Match, the AAPI Online application service must be used by applicants to apply to all internship programs that are participating in the Match. For both Phases of the Match, all applications must be submitted using the AAPI Online, and no site may request a printed copy of an applicant's application materials.**
 - a. Internship programs and applicants must abide by the APPIC AAPI Online Supplemental Materials policy, which states that the only supplemental materials that may be requested by internship programs or submitted by internship applicants are (a) a treatment or case summary, and (b) a psychological evaluation report.
 - b. All programs participating in Phase II of the Match must accept applications until the application deadline for Phase II established by APPIC. Programs may elect to continue accepting applications for Phase II beyond the application deadline, but are not required to do so.
- 4. For Phase I of the Match, internship programs that conduct on-site or telephone interviews must make a reasonable effort to notify every applicant who submits a complete set of application materials as to his/her interview status.**
 - a. Sites that conduct open houses to which all applicants are invited and conduct no other interviews are exempt from this interview notification requirement (this process should be clearly stated in the APPIC Directory Online and/or sites' publicity materials).
 - b. Notification of interview status for Phase I of the Match must occur no later than the interview notification date that appears in the program's APPIC Directory Online listing and/or other publicity materials, and may be communicated via e-mail, telephone, regular mail (to be received no later than the interview notification date), or other means.
 - c. For Phase II of the Match, notification of interview status is not required.
- 5. Participants in the APPIC Match, including applicants and internship programs, may not communicate, solicit, accept, or use any ranking-related information pertaining to either Phase of the Match prior to the release of the results for Phase II of the Match.**
 - a. Internship programs must include the following statement on their web sites and in their brochures: "This internship site agrees to abide by the APPIC policy that no person at this training facility will solicit, accept, or use any ranking-related information from any intern applicant."
 - b. Internship programs may choose to inform applicants as to whether or not the applicants remain under consideration for admission (e.g., whether or not the applicants will be ranked) but may not communicate any other ranking information. The spirit of this item precludes any communication of rankings for either Phase of the Match prior to the release of the results for Phase II of the Match, however "veiled" or indirect such communication might be. However, sites and applicants are allowed to communicate about matters that do not involve the sharing of ranking information.
 - c. Internship programs and applicants may never solicit information regarding applicants' and programs' rankings at any time, either during the Match or after the Match results are released.

- d. Internship sites that offer more than one program in the APPIC Match (i.e., sites with more than one program code number) are expected to ask applicants to identify the site's programs to which they are applying. In addition, these sites may, for the sole purpose of arranging interviews, ask applicants to designate their preferences regarding the programs at the site for which they wish to be interviewed. These sites may request interview preference information only when it is essential for making interview arrangements, and such information may not be used for any other purpose in the selection process. Furthermore, these sites may not solicit any information about applicants' final rankings of programs. Sites requesting interview preferences must state clearly in their written materials that these preferences will be used for arranging interviews only and for no other purpose.
 - e. Any ranking information that is communicated between applicants and internship programs, even though such communication is a violation of these policies, is non-binding and may be changed at any time prior to the Rank Order List submission deadline. The only binding rankings are the confidential Rank Order Lists that are submitted to the APPIC Match.
 - f. Internship programs may choose to provide applicants with information about the size of the applicant pool.
- 6. Results of the APPIC Match constitute binding agreements between applicants, internship programs, and APPIC that may not be reversed without APPIC's consent.**
- a. Failure to receive timely notification of the APPIC Match results, for any reason, does **not** constitute a release from the obligations of the APPIC Match.
 - b. Appointments of applicants to internship positions may be contingent upon the applicants satisfying certain eligibility requirements. Such eligibility requirements must be clearly specified in the internship programs' written materials and provided to applicants in advance of the deadline for submitting rankings for the APPIC Match.
 - c. Internship training directors are encouraged to contact matched applicants by telephone as soon as possible after (but not before) 11:00 a.m. Eastern Time on the APPIC Match Day for each Phase of the Match. On each APPIC Match Day, no contact between internship sites and matched applicants should occur prior to 11:00 a.m. Eastern Time.
 - d. It is not necessary for internship training directors to contact applicants with whom they have not been matched.
- 7. Internship training directors must put in writing their appointment agreements with matched applicants in letters postmarked or e-mailed no later than 7 days following receipt of the APPIC Match results for each Phase of the Match.**
- a. Letters must be addressed to the applicants and must include confirmation of conditions of the appointment, such as stipend, fringe benefits, and the dates on which the internship begins and ends.
 - b. Copies of these appointment letters must be sent simultaneously to applicants' academic training directors.

- 8. Positions that remain unfilled in Phase I of the Match must be offered in Phase II of the Match to applicants who do not obtain a position in Phase I. Positions not offered in Phase I of the Match, such as positions for which funding becomes assured after the Phase I Rank Order List deadline or newly created positions, may also be offered to eligible applicants in Phase II of the Match.**
- a. All applicants who register for Phase I of the Match and who do not obtain a position in Phase I (e.g., those who withdraw or remain unmatched) are eligible to participate in Phase II of the Match. Applicants who match to a position in Phase I are not eligible to participate in Phase II. Applicants who do not register for Phase I cannot register for or participate in Phase II.
 - b. All positions at an internship site that remain unfilled in Phase I of the Match must be offered to applicants in Phase II of the Match. A site can decide not to offer an unfilled position in Phase II only if it decides not to fill the position in the program for the coming year (e.g., anticipated loss of funding, shifting of funding to other purposes). Removing an unfilled position from Phase II of the Match for any other reason requires APPIC approval.
 - c. Internship programs with positions that are offered in Phase II of the Match may not take any actions to fill these positions prior to 11:00 a.m. Eastern Time on APPIC Phase I Match Day. Applicants who do not obtain a position in Phase I of the Match, along with other individuals acting on their behalf (e.g., doctoral program faculty), may not contact internship programs about available positions prior to 11:00 a.m. Eastern Time on APPIC Phase I Match Day. All applications to programs for Phase II of the Match must be submitted using the AAPI Online, as specified in paragraph 3 above.
- 9. Upon completion of both Phases of the APPIC Match, internship programs that have one or more open positions may then make other direct offers of admission (verbal or written) to applicants who are not already matched or to applicants who did not participate in the APPIC Match. Applicants who are not matched to a position may then receive other direct offers of admission.**
- a. Internship programs that have or anticipate having open positions after completion of Phase II of the Match may not take any actions to fill these positions prior to 11:00 a.m. Eastern Time on APPIC Phase II Match Day. Applicants who are not matched to a position after completion of both Phases of the Match, along with other individuals acting on their behalf (e.g., doctoral program faculty), may not contact internship programs about open positions prior to 11:00 a.m. Eastern Time on APPIC Phase II Match Day.
 - b. Prior to making offers to fill open positions, internship training directors must verify with applicants, to the best of their abilities, that the applicants have not previously been matched to other internship programs nor accepted other offers.
 - c. Prior to making offers to fill open positions, internship training directors must ensure that doctoral programs have verified their applicants' eligibility and readiness for internship. Such verification can occur via a review of the appropriate application materials and/or via direct communication with the doctoral programs.

- d. Applicants may not accept an offer if they have been matched or have already accepted an offer from another internship program.
- e. An offer (verbal or written) that has been tendered by an internship program and accepted by an applicant constitutes a binding agreement between the program, the applicant, and APPIC that may not be reversed without APPIC's consent.
- f. The internship training director must put in writing the appointment agreement with the applicant in a letter postmarked or e-mailed no later than 7 days following acceptance of the offer by the applicant, as described in paragraphs 7a and 7b above.

10. Individuals who perceive violations of these policies are urged to request compliance with APPIC policies from the appropriate party (parties).

- a. Unresolved compliance problems should be resolved informally, whenever possible, through consultation among applicants, internship training directors, academic training directors, and/or APPIC, or by other informal means. APPIC sponsors an "Informal Problem Consultation" process (described on the APPIC web site) that is recommended for use in addressing these issues.
- b. Internship training directors who become aware of violations of these policies by other internship training directors should (a) urge the affected applicants and academic training directors to follow the informal resolution procedures described above, (b) directly contact the other internship training directors, and/or (c) use the APPIC "Informal Problem Consultation" process.
- c. Perceived violations of APPIC Policies and/or the Match Agreement that are not resolved through the APPIC "Informal Problem Consultation" process may be reported as a formal complaint to the APPIC Standards and Review Committee (ASARC).

11. If a formal complaint is filed with APPIC regarding an alleged violation of these policies, the APPIC Standards and Review Committee (ASARC) will evaluate the allegations and recommend an appropriate course of action to the APPIC Board of Directors. The APPIC Board of Directors is the body that ultimately determines the course of action. ASARC policies are described on the APPIC web site. Formal complaints regarding violations of APPIC policies should be filed by submitting an ASARC Complaint Form (available from the APPIC web site) to:

**Chair, APPIC Standards and Review Committee
 17225 El Camino Real
 Onyx One - Suite #170
 Houston, TX 77058-2748

NOTE: APPIC members, and non-APPIC members who participate in the APPIC Match, may reprint the APPIC Match Policies in their program materials and brochures by stating "Reprinted with permission".

REGISTRATION

Internship Applicants: Registration materials may be downloaded directly from the National Matching Services, Inc. (NMS) web site at:

<http://www.natmatch.com/psychint>

Internship programs: Non-APPIC member internship sites must request a registration packet directly from NMS.

MATCH INFORMATION

Information on the APPIC Match may be obtained from a variety of sources:

1. The National Matching Services web site:
<http://www.natmatch.com/psychint>
2. The APPIC web site:
<http://www.appic.org/>
3. The MATCH-NEWS e-mail list is a free service provided by APPIC that provides regular updates about the APPIC Match. Subscribing to MATCH-NEWS means that you will receive occasional e-mail messages (usually less than five per month) containing the latest news and information about the APPIC Match. It is strongly recommended that all Match participants subscribe to this list.

To subscribe, send a blank e-mail message to:

SUBSCRIBE-MATCH-NEWS@LYRIS.APPIC.ORG

4. You may contact National Matching Services, Inc. directly at either address below or via e-mail at psychint@natmatch.com:

5. You may contact the APPIC Match Coordinator, Dr. Greg Keilin, at gkeilin@mail.utexas.edu or (512) 475-6949.

INTERN APPLICANTS

APPIC has adopted the following policies of the American Psychological Association concerning intern applicants:

- (1) Intern applicants shall have completed practicum experience and be enrolled in a doctoral program in professional psychology which requires internship training; or
- (2) The internship is an essential component of the training for persons seeking to change to a professional specialty for which they were originally not prepared.

It must be stressed that taking an internship, or acquiring experience in a practicum setting, is not sufficient preparation for becoming a clinical, counseling, or school psychologist without prior training in the relevant specialty area. The internship experience is properly seen as only one element in the change of specialty. Thus, doctoral psychologists who are attempting to qualify as practitioners in an area different from that emphasized in their original training must be certified in writing by a director of a doctoral-level professional psychology training program in the new specialty, as having completed an organized program of didactic and practicum work which is the equivalent of the usual pre-internship preparation in the specialty area. APPIC members will not, therefore, accept applicants who do not meet these and other current policies regarding re-specialization in professional psychology.

Appendix A, B, C, D

BYLAWS OF THE ASSOCIATION OF PSYCHOLOGY POSTDOCTORAL AND INTERNSHIP CENTERS

Revised June 1998

Article I. Name

The name of this association shall be the Association of Psychology Postdoctoral and Internship Centers.

Article II. Purpose

The Association is organized and operated to:

- promote high quality training in professional psychology.
- provide a forum for exchanging views; recognizing differences; establishing policies, procedures and contingencies on training matters; and resolving issues for which common agreement is either essential or desirable.
- represent the views of training agencies to groups and organizations whose functions, objectives and/or actions impact our membership.
- facilitate exchange of information between institutions and agencies offering doctoral and postdoctoral professional training and doctoral and postdoctoral students in psychology.
- establish and monitor policies for matching students seeking internships or postdoctoral training with sites providing such training.

Article III. Offices

The principal office of the Association and such other offices as it may establish shall be located at such place or places as may be designated by the Board of Directors.

Article IV. Legislative Powers

Section 1. Vested Powers.

The legislative powers of the Association, including the power to amend the Articles of Incorporation and the bylaws and to specify methods of voting, are vested in the delegates of the member agencies and institutions present and voting at an annual or special meeting or by mail ballot.

Section 2. General Functions.

- A. The Association so voting may promulgate policies and recommend procedures relative to standards of internship and postdoctoral levels of training, uniform notification times for internship matches, and other related matters.

- B. The Association so voting may instruct its officers and the Board of Directors; authorize the raising of funds and appropriate available monies; create committees or authorize the appointment thereof; and initiate investigations and studies of such problems as it may designate.
- C. The Association so voting may employ, or authorize the employment of staff.
- D. The Association so voting may take such other actions not in conflict with these bylaws as it deems necessary, expedient or desirable to fulfill and implement its stated purpose.

Article V. Membership

Section 1. Classes and Eligibility.

The Association shall have one class of members: North American doctoral internships and postdoctoral training programs in professional psychology under the director of a licensed psychologist and in accordance with standards and regulations as APPIC shall determine shall be eligible for membership.

Section 2. Membership.

Members shall be duly elected dues paying programs in good standing. Each member program shall be represented by its Training Director or his/her designee. Such a designee shall be a credentialed psychologist actively involved in the administrative or clinical conduct of the member program by whom she/he has been designated. All applicants for membership shall file with the Secretary, or designee, a written application in such form as the Board of Directors shall from time to time determine.

Section 3. Voting Rights.

Each member shall be entitled to one vote on each matter submitted to a vote of the members.

Section 4. Termination of Membership.

The Board of Directors may (a) by a majority vote of those present at any regular constituted meeting, terminate the membership of any member who becomes ineligible for membership or suspend or expel any member who shall be in default in the payment of dues for the period fixed in Article XIV, Section 3 of these bylaws; and (b) by a two-thirds vote of the members of the Board suspend or expel a member for cause after an appropriate hearing.

Section 5. Resignation.

Any member may resign by filing a written resignation with the Secretary, or designee, but such resignation shall not relieve the member so resigning of the obligation to pay any dues, assessments or other charges theretofore accrued and unpaid.

Section 6. Reinstatement.

Upon written request signed by a former member and filed with the Secretary, or designee, the Board of Directors, may, by the affirmative vote of two-thirds of the members of the Board, reinstate such former member to membership upon such terms as the Board of Directors may deem appropriate if the former member has been inactive for one year or less. If a former member has been inactive for greater than one year, the program must reapply through the formal application process.

Section 7. Transfer of Membership.

Membership in this Association is not transferable or assignable.

Article VI. Membership Meetings

Section 1. Annual Meeting.

An annual meeting of the members shall be held at a time and place designated by the Board of Directors and announced to the membership at least three months in advance for the transaction of such business as may come before the meeting.

Section 2. Special Meeting.

Special meetings of the members may be called by the Chair of the Board of Directors, the Board, or not less than one-tenth of the members having voting rights.

Section 3. Place of Meeting.

The Board of Directors may designate any place as the place of meeting for any annual meeting or for any special meeting called by the Board. If no designation is made or if a special meeting be otherwise called, the place of meeting shall be the registered office of the Association; but if all of the members shall meet at any time and place and consent to the holding of a meeting, such meeting shall be valid without call or notice, and at such meeting any association action may be taken.

Section 4. Notice of Meetings.

Written notice stating the place, day and hour of any meeting of members shall be sent to each member entitled to vote at such meeting, not less than ten nor more than one hundred and fifty days before the date of such meeting, by or at the direction of the Chair, or the Secretary, or the officers or persons calling the meeting. In case of a special meeting or when required by statute or by these bylaws, the purpose or purposes for which the meeting is called shall be stated in the notice. If mailed, the notice of a meeting shall be deemed to be delivered when deposited in the United States mail addressed to the member at his/her address as it appears on the records of the Association, with postage thereon prepaid.

Section 5. Informal Action by Members.

Any action required by law to be taken at a meeting of the members, or any action which may be taken at a meeting of members, may be taken without a meeting if a consent in writing, setting forth the action so taken, shall be signed by all of the members entitled to vote with respect to the subject matter thereto.

Section 6. Quorum.

No less than twenty-five members shall constitute a quorum at any meeting. If a quorum is not present at any meeting of members, a majority of the members present may adjourn the meeting from time to time without further notice.

Section 7. Proxies.

At any meeting of members, a member entitled to vote may vote by proxy executed in writing by the member. No proxy shall be valid after eleven months from the date of its execution, unless otherwise provided in the proxy. Proxies shall be exercised only by other members.

Section 8. Manner of Acting.

A majority of the votes entitled to be cast on a matter to be voted upon by the members present or represented by proxy at a meeting at which a quorum is present shall be necessary for the adoption thereof unless a greater proportion is required by law or by these bylaws.

Section 9. Voting by Mail.

Where the Board of Directors is to be elected by members such election may be conducted by mail in such manner as the Board shall determine.

Article VII. Management of the Association

Section 1. Board of Directors.

The affairs, business, government and management of the Association shall be vested in a Board of Directors.

Section 2. Number, Tenure and Qualifications.

The number of Board of Directors members who are representatives of the members of the association shall be seven. Each member shall hold office for three years and until his/her successor is elected and qualified, subject to restrictions found in these bylaws. Service on the Board of Directors shall be limited to two consecutive terms which must be followed by a three year interval before further terms. This section does not apply to members appointed to fill vacancies on the committee, as provided by Section 5 of this Article. In addition, there will be one member who represents the public. The term for the public member will be three years, or until her/his successor is elected and qualified, subject to restrictions found in these by-laws, and renewable at the pleasure of the Board and the public member.

Section 3. Election to Board of Directors.

Board members who are representatives of the members of the Association shall be elected by members by mail ballot from nominations submitted by the Board prior to the annual meeting of the membership. The ballot shall be deemed to be delivered when deposited in the United States mail addressed to the member at his/her address as it appears on the records of the Association, with postage thereon paid. Ballots shall be returned within 30

days of that date. In case of a tie vote for a single position on the Board, a run-off election shall be held by a special ballot mailed to members. Elections shall be staggered so that no less than two Board members who are representatives of the members of the Association shall be elected each year. The public member of the Board will be elected by the other Board members, after being nominated prior to the annual meeting of the membership.

Section 4. Meetings.

- A. **Regular Meetings.** Two regular meetings of the Board of Directors shall be held without other notice than this bylaw, one immediately before, and at the same place, as the annual meeting of members. The Board may provide by resolution the time and place for the holding of additional regular meetings of the Board without other notice for such resolution.
- B. **Special Meetings.** Special meetings of the Board of Directors may be called by or at the request of the Chair or any two Board members. The person or persons authorized to call special meetings of the Board may fix any place as the place for holding any special meeting of the Board called by them.
- C. **Notice.** Notice of any special meeting of the Board of Directors shall be sent at least two days previous to the meeting to each Board member at his/her address as shown by the records of the Association. Any Board member at any meeting shall constitute a waiver of notice of such meeting, except where a Board member attends a meeting for the express purpose of objecting to the transaction of any business because the meeting is not lawfully called or convened. Neither the business to be transacted at, nor the purpose of, any regular or special meeting of the Board needs to be specified in the notice or waiver of notice of such meeting, unless specifically required by law or by these bylaws.
- D. **Quorum.** A majority of the Board of Directors shall constitute a quorum for the transaction of business at any meeting of the Board; but if less than a majority of the Board are present at said meeting, a majority of the Board present may adjourn the meeting from time to time without further notice until a quorum is present, when any business may be transacted that may have been transacted at the meeting as originally called.
- E. **Manner of Acting.** The act of a majority of the Board of Directors present at a meeting at which a quorum is present shall be the act of the Board, unless the act of a greater number is required by law or by these bylaws.

Section 5. Vacancies.

Any vacancy occurring in the Board of Directors and any Board position to be filled by reason of an increase in the number of Board members may be filled by the affirmative vote of a majority of the remaining Board. A Board member elected to fill a vacancy shall be elected for the unexpired term of his/her predecessor in office.

Section 6. Compensation.

Board of Directors members as such shall not receive any stated salaries for their services, but by resolution of the Board a fixed sum and expenses of attendance, if any, may be allowed for attendance at each regular or special meeting of the Board; but nothing herein contained shall be construed to preclude any Board member from serving the Association in any other capacity and receiving compensation therefore.

Section 7. Informal Action by Board of Directors.

Any action required by law to be taken at a meeting of the Board, or any action which may be taken at a meeting of the Board, may be taken without a meeting if a consent in writing, setting forth the action so taken, shall be signed by all of the Board members.

Article VIII. Duties and Powers of the Officers and Executive Committee

Section 1. Officers.

The Officers of the Association shall be a Chair, Vice-Chair, a Secretary, a Treasurer, and/or such other officers as may be elected in accordance with the provisions of this Article. The Board of Directors shall elect from among its members the officers it shall deem advisable, such officers to have the authority and perform the duties prescribed, from time to time, by the Board. The term as officer shall be determined by the Board, as it shall deem advisable, but in no event, shall the term as officer exceed three years. It is permissible for an individual to have more than one term in office subject to the provisions of Article VII, Sections 2 and 5. No two offices may be held by the same person simultaneously.

- A. Chair. The Chair shall be the principal officer of the Association and shall in general manage all of the business and affairs of the Association. He/she shall preside at all meetings of the members and of the Board of Directors. He/she shall sign, with the Treasurer or any other proper officer of the Association authorized by the Board of Directors, any deeds, mortgages, bonds, contracts, or other instruments which the Board has authorized to be executed, except in cases where the signing and execution thereof shall be expressly delegated by the Board or by these bylaws or by statute to some other officer or agent of the Association; and in general he/she shall perform all duties incident to the office of the Chair and such other duties as may be prescribed by the Board from time to time.
- B. Vice-Chair. In the absence of the Chair or in event of his/her inability or refusal to act, the Vice-Chair shall perform the duties of the Chair and when so acting, shall have all the powers of and be subject to all restrictions upon the Chair. Any Vice-Chair shall perform such duties as from time to time may be assigned to him/her by the Chair or by the Board of Directors.
- C. Treasurer. If required by the Board of Directors, the Treasurer shall give a bond for the faithful discharge of his/her duties in such sum and with such surety or sureties as the Board shall determine. He/she shall have charge and custody of and be responsible for all funds and securities of the Association; receive and give receipts for monies due and payable to the corporation from any source whatsoever, and deposit all such monies in the name of the Association in such banks, trust companies or other depositories as shall be selected in accordance with the provisions of Article X of these bylaws.
- D. The Secretary shall keep the minutes of the meetings of the members and of the Board in one or more books provided for that purpose; see that all notices are duly given in accordance with the provisions of these bylaws or as required by law; be custodian of the Association records; keep a register of the post office address of each member which shall be furnished to the Secretary by such member; and in general perform all duties incident to the Office of Secretary and such other duties as from time to time may be assigned to him/her by the Chair or the Board.

Section 2. Staff.

The Board may employ staff who shall provide Central Office Services under the direction of the Board.

Section 3. Removal of Board of Directors Members.

An officer or other Board member may be removed for just cause by a two-thirds (2/3) majority vote of the membership of the Board of Directors.

Article IX. Committees

Section 1. Authorization.

Such committees as are necessary to carry out the functions of the Association may be created by the Association at any meeting, by the Board of Directors, or by the Chair.

Section 2. Committee Functions.

- A. Such committees shall refer to the charge given to them by the Association, Board of Directors, or the Chair.
- B. Each committee shall develop a mission statement which must be approved by the Board of Directors. The designation and appointment of such groups and delegation thereto of authority shall not operate to relieve the Board, or any individual Board member, of any responsibility imposed upon them by law.
- C. Each committee shall report back to the Board of Directors upon completion of its mission, and at such other interim times as may be directed by the Chair or the Board.

Article X. Contracts, Checks, Deposits and Funds

Section 1. Contracts.

The Board of Directors may authorize any officer or officers, agent or agents of the Association, in addition to the officers so authorized by these bylaws, to enter into any contract or execute and deliver any instrument in the name of and on behalf of the Association, and such authority may be general or confined to specific instances.

Section 2. Checks, Drafts, etc.

All checks, drafts or orders for the payment of money, notes or other evidences of indebtedness issued in the name of the Association, shall be signed by such officer or officers, agent or agents of the Association and in such manner as shall from time to time be determined by resolution of the Board of Directors. In the absence of such determination by the Board, such instrument shall be signed by the Treasurer or by the Chair or Vice-Chair of the Association.

Section 3. Deposits.

All funds of the Association shall be deposited from time to time to the credit of the Association at such banks, trust companies or other depositories as the Board of Directors may select.

Section 4. Gifts.

The Board of Directors may accept on behalf of the Association any contribution, gift, bequest or device for the general purposes or for any special purpose of the Association.

Article XI. Books and Records

The Association shall keep correct and complete books and records of account and shall also keep minutes of the proceedings of its membership, Board of Directors and committees having any of the authority of the Board, and shall keep at its registered or principal office a record giving the names and addresses of the members entitled to vote. All books and records of the Association may be inspected by any member, or his/her agent or attorney, for any proper purpose at any reasonable time.

Article XII. Publications

Section 1. Authorized Publications.

There shall be two principal publications of the Association:

1. An annual Directory of doctoral internship and postdoctoral training programs in professional psychology. Listing in the Directory shall be in accordance with such criteria, conditions and standards as may be determined by the membership or the Board of Directors.
2. A Newsletter containing reports of the Annual Meeting, Board of Directors meetings and actions, and other such information deemed important to the membership.

Section 2. Copies.

All members of the Association will receive copies of the publications gratis. Other organizations, agencies, bodies and individuals may subscribe to the publications for fees to be determined by the Board of Directors on a periodic basis.

Article XIII. Fiscal Year

The fiscal year of the Association shall begin on the first day of January and end on the last day of December in each year.

Article XIV. Dues

Section 1. Annual Dues.

The membership, on the recommendation of the Board of Directors, may determine from time to time the amount of annual dues payable to the Association by the members.

Section 2. Payment of Dues.

Dues shall be payable in advance on the first day of each fiscal year. Dues of a new member shall be paid in a manner to be determined by the Board of Directors.

Section 3. Default and Termination of Membership.

When any member shall be in default in payment of dues for a period of twelve months from the beginning of the fiscal year, the membership may thereupon be terminated by the Board of Directors in the manner provided in Article V, Section 4 of these bylaws.

Section 4. Reinstatement.

Any member that has terminated membership while in good standing or that has forfeited membership by nonpayment of dues may be reinstated by the Board of Directors of the Association in the manner provided in Article V, Section 6 of these bylaws and payment of the current year's dues and any dues in arrears.

Article XV. Waiver of Notice

Whenever any notice is required under the provisions of the relevant Non-Profit Corporation Act or under the provisions of the Articles of Incorporation or the Bylaws of the Association, a waiver thereof in writing signed by the person or persons entitled to such notice, whether before or after the time stated therein, shall be deemed equivalent to the giving of such notice.

Article XVI. Amendments to Bylaws

These bylaws may be altered, amended or repealed and new bylaws may be adopted by two-thirds of the members responding by mail ballot. The ballot shall be deemed to be delivered when deposited in the United States mail addressed to the member at his/her address as it appears on the record of the Association, with postage thereon prepaid. Ballots shall be returned within thirty days of that date. Any Article or Section thereof contained in these bylaws may be amended to have full force and effect upon current and future members, without reservation.

LISTING OF DOCTORAL INTERNSHIP PROGRAMS

- Programs are organized alphabetically by state; by city within state; and by agency within city. Programs outside of the United States are listed last.
- **APPIC is not an accrediting agency.** Listing in the directory indicates that program applications have been reviewed by APPIC Membership Committees and that the programs as submitted are in compliance with the requisites for APPIC Membership described in the policy section of the Directory.
- The information in the directory listings has been updated online by each program's training director and was correct as of May 2007. APPIC does not take responsibility for information that has been incorrectly entered by training directors.
- APA accreditation status is accurate as the directory goes to press, and may change between this date and the appearance of the directory. Interested readers should contact APA and/or individual programs for information about current APA accreditation status.

Other Application Requirements
US citizenship is required for VA stipends.

Program Description

The UAB Psychology Training Consortium offers an incredible variety of training opportunities. We have a wide range of populations and specialty clinics at one of the premier medical settings in the South. Stipend sites include the Department of Psychiatry, the VA, and Civitan International Research Center (Child). Other training sites include Departments of Neurology, Preventive Medicine, Childrens Hospital, and Spain Rehabilitation Center. Interns choose 3 major and 3 minor rotations where they train for 4 months each during the year. Major rotations are only available through the stipend sites while minor rotations are available at any consortium training site. Because of the variety of minors, interns can specialize within a generalist framework. For example, interns can obtain the 50% neuropsychological experience requested by APA Division 40 by choosing certain minor and major rotations. We have over 40 faculty members participating in the consortium and we pride ourselves in the fact that interns are not required for any service. Most rotations are easily adaptable to the interns level of knowledge: to offer an initial experience or enhance mastery. In addition, we offer multidisciplinary training opportunities when available. Following internship, our interns most frequently continue their training in postdoctoral experiences, are employed in medical settings, or enter private practice. UAB offers postdoctoral fellowships in several areas including neuropsychology, substance abuse, inpatient/outpatient psychiatry, internal medicine, and preventive medicine, as well as others. Opportunities vary depending upon the funding mechanism and change yearly. For more information, feel free to contact the Training Director or specific faculty members.

Males over the age of 18 must be registered with the Selective Service to apply for VA internships.

Program Description

The Psychology internship program at the Tuscaloosa VA Medical Center is an APA-accredited training program that offers internship training to U.S. citizens who are pursuing a doctoral degree in clinical or counseling psychology from an APA-accredited institution. The program is relatively new having trained its first class in 2011-12. The program provides broad-based, generalist training in clinical psychology with opportunities for focused training in PTSD, substance abuse, health behavior/primary care, and psychological assessment. Our program is committed to the integration of science and practice by using clinical science as the foundation for implementing and evaluating assessments and interventions during training. The Psychology staff assumes the responsibility to train each intern in psychological assessment and the treatment of individuals and groups, and to prepare interns for the clinical and ethical demands of a challenging career in psychology. To be considered, students must demonstrate completion of graduate course work and a minimum of 1000 total hours of practicum experience including assessment and intervention with exposure to a broad range of psychopathology across varied populations and settings.

Program Description

The goal of the CAVHCS internship program is to provide broad and practical training to prepare interns to practice as post-doctoral residents or as entry-level psychologists in a wide variety of clinical settings, including medical centers, public sector health care settings and private practice. Training is based on the Practitioner-Scholar, or Vail, model. The Psychology staff assumes the responsibility to train interns in psychological assessment, individual, group and family treatment of adults, with an emphasis on evidence based practice, and to develop skills of supervision and consultation, as well as enhancing their knowledge of and sensitivity to the cultural, ethical and legal issues that impact psychological practice. Interns have opportunities to work with a diagnostically diverse group of mental health patients, but they also receive specialty training in the area(s) of their choice, including PTSD, Medical Psychology and Primary Care/Behavioral Health. Our program is distinctive in providing interns the opportunity to enhance and develop their cultural competence in working with an ethnically diverse patient population, both urban and rural, which is culturally rich, but is traditionally underserved. In addition to the acquisition of knowledge and skills, it is expected that the intern will develop their professional identity as a psychologist during the internship year, as they assume greater independence and responsibility. The internship aims to provide interns with an appropriate blend of nurturance and challenge in a well-structured framework as they develop greater clinical competence and autonomy.

Program Description

For a full Program Description, please visit: <http://www.psychologytraining.va.gov/anchorage/>. Our training program is committed to the scholar-practitioner model of clinical education and practice. We expect interns to be able to critically evaluate research in published studies and papers and apply research findings in their clinical practices. There are three foundations or strategies to our training. First, a strong emphasis is placed on developing the intern's ability to approach clinical phenomena from the perspective of a scholar-practitioner. Second, an equally important foundational component of our training program is a strong emphasis on the psychosocial model of recovery that focuses upon actively involving clients in determining the goals and processes of their own recovery and (re)discovering their strengths. Interns will have an excellent opportunity to incorporate the recovery model into their professional practice at the beginning of their careers. Third, we emphasize the development of skills in implementing specific EBPs including: Motivational Interviewing, Seeking Safety, Prolonged Exposure, Cognitive Processing Therapy, and Cognitive Behavior Therapy, and their application as appropriate in different cultural contexts.

Program Description

The internship is affiliated with Argosy University—Phoenix and Midwestern University—Phoenix, and as such is available only to students from those two schools. Interns receive training in a breadth of assessment and therapy skills that will enable them to function as psychologists in a variety of settings upon completion of internship. Available rotations for interns are in neuropsychology, the forensic program, and the sexual offender treatment program. Interns participate in rotations for six months each. Neuropsychological assessment services are provided on all units (in both the civil and forensic areas of the hospital) to patients with possible or documented organic mental disorders, such as traumatic brain injury, cerebro-vascular accident, and various forms of dementia. Interns will gain experience in comprehensive neuropsychological assessment with a broad repertoire of instruments. Detection of malingering of memory deficits and prescription of rehabilitative strategies are of particular interest for this hospital population. Interns on the Forensic rotation will work with hospital patients who have been adjudicated Guilty Except Insane, and will also work with residents of the sexual offender treatment program. They will receive training and experience in psychological evaluations, risk assessments, direct therapeutic interventions, and consultation to the treatment teams for behavior management issues. Interns on the sexual offender treatment program rotation will focus on the evaluation and treatment of sexual offenders. Throughout the training year, during each six-month rotation, interns gain experience in both individual and group psychotherapy. Interns may (depending on availability of rotation) also receive training experiences through special opportunities or minor rotations in the Dialectical Behavior Therapy (DBT) program and the General Adult Program with civilly committed patients.

Program Description

Internship is based on the practitioner-scholar model. The goal of the program is to train generalists with specialty interest in Health Psychology, Neuropsychology, Interprofessional Mental Health and PTSD/Mental Health. Competitive applicants typically have academic and direct patient care in these areas. Interns have the opportunity to increase their breadth of training by having the option to do rotations in the Mental Health clinic, the PTSD clinic, the Health Psychology clinic and the multidisciplinary OEF/OIF Post Deployment clinic. There are several unique aspects of the program. First, interns have the opportunity to receive consultation and training from a national trainer in the area of PTSD. Interns have the opportunity to achieve provider status in the area of Cognitive Processing Therapy. Second, interns have the opportunity to attend a weekly hypnosis seminar. Third, interns participate in a Supervision Clinic in which they learn the tenets of clinical supervision. Finally, interns interested in neuropsychology have the opportunity to meet APA Division 40 requirements in the first six months of internship. The internship is divided into four rotations of three months duration. Interns complete major rotations in Health Psychology, Neuropsychology, Interprofessional Mental Health and PTSD/Mental Health. Interns also complete minor rotations in either the mental health clinic, the PTSD clinic, Health Psychology clinic or the PDHC clinic. Interns are required to complete a minimum of four psychological batteries throughout the year. A didactic educational seminar series is held weekly with opportunities for other on-site and off-site educational offerings. Interns receive a minimum of four hours of supervision per week. Supervisors are assigned for rotations, testing, and group supervision. Most supervisors have been trained and certified in a wide variety of evidenced based therapies (e.g., CBT, ACT, PE, EMDR, MI). Please see brochure for more information.

Program Description

Southwest offers three internship tracks: (1) Rotation,(2) Residential Therapist, (3) Outpatient Therapist. (1) Rotation program is a 12-month program. Six months are spent in an in-pt crisis recovery program and 6 months in an Intensive Outpt clinic that treats opioid addiction/behavioral health issues. (2) Residential Therapist track is a 12-month internship providing group & individual therapy to adults in residential treatment. Intern also helps residents in community integration activities, and is a consultant to BHTs at residential sites. This intern must be able to transport clients in agency van. (3) Outpatient Clinic track is 12-month internship working w/adults, children, families. Intake assessments, treatment planning, group/individual counseling, client staffings are main activities. NOTE: One outpatient internship is working solely with adults; other outpatient internships include children and families. All Psychology Interns gain proficiency in professional development and work in community mental health. Interns will develop and hone skills in intake assessments, designing treatment programs, and facilitating group and individual therapy sessions. As part of a multidisciplinary team, Interns will engage in client staffings, staff meetings and trainings. Psychology Interns will have opportunities to work with dually diagnosed individuals. All interns will have opportunities to work in the inpatient program on select weekends regardless of internship track. All internships have on-site training, individual & group supervision, and didactics. Through didactics, Interns will meet with psychologists and other behavioral health professionals practicing in the Phoenix area. Strong focus on case presentations. For more information, contact the training director, Dr. Partington: debrap@sbhservices.org.

Program Description

Phoenix Children's Hospital psychologists provide assessment, intervention, consultation, and treatment to infants, children, adolescents, and families. The psychology internship program is offered by the Behavioral Medicine Department, which trains medical residents, psychology practicum students, and psychology interns. Our predoctoral internship program offers simultaneous training in assessment, inpatient medical, and outpatient medical/non-medical intervention. One track will emphasize neuropsychological assessment and the other consultation/liaison. The program is APA accredited and we are a member of APPIC. The primary goal of the program is to train interns in the core competencies needed to be a skilled psychologist working with children, adolescents, and families in a medical setting. Additionally, multicultural/diversity issues, ethical issues, interpersonal skills, and professional behavior are addressed during the training year. Our program embraces cultural and individual diversity and strives to recruit interns representative of diverse personal and demographic characteristics. Candidates likewise, should have experience, and the desire to work with diverse groups of children, adolescents, and families in a medical setting.

Other Application Requirements

1.U.S. citizenship. VA is unable to consider applications from anyone who is not currently a U.S. citizen. Verification of citizenship is required following selection. All interns must complete a Certification of Citizenship in the United States prior to beginning VA training. 2.A male applicant born after 12/31/1959 must have registered for the draft by age 26 to be eligible for any US government employment, including selection as a paid VA trainee. Male applicants must sign a pre-appointment Certification Statement for Selective Service Registration before they can be processed into a training program. Exceptions can be granted only by the US Office of Personnel Management; exceptions are very rarely granted.

Program Description

The ASU CS internship program uses a developmental-practitioner training model to prepare psychologists with competencies in: A) clinical intake and assessment, individual and group therapy, crisis intervention, collaboration with multidisciplinary team, outreach, and consultation; B) multicultural competency; C) professional skills, self awareness, and ethical practice. An important training premise is that interns benefit from being exposed to a variety of role models with differing theoretical orientations, professional interests, and skills. The diversity of role models is seen as enhancing the development of the intern's unique professional identity. Primary strengths of the ASU CS internship are the quality of supervision and the staff's commitment to training. ASU CS actively works to model and to promote: The valuing of human differences on individual, organizational, and community levels. The facilitation of human potential. The internship program includes: A) triage and initial evaluation, provision of focused individual therapy & group therapy, consultation, outreach, and emergency services (including some on-call service primarily to residential life), C) diversity seminar and intern seminar, D) case conference, and F) supervision of a practicum student. See our website for a complete program description: <https://eoss.asu.edu/counseling>. We welcome contact from potential applicants.

Program Description

The Arizona Psychology Training Consortium is a non-profit subsidiary corporation of the Arizona Psychological Association. There are many internship sites within the Consortium. They provide training in such specialty areas as school psychology, psychological assessment, neuropsychological assessment, multicultural psychotherapy, and private practice. School district sites often have an earlier starting date. There are rotations between some of the training sites. Interns participate each month in a two-day training event sponsored by the Consortium, and they travel to sites across the state to experience differing client populations and service delivery systems. Considerable travel to training events is required, including mandatory training events in Tucson and Flagstaff. Overnight lodging is occasionally required to attend the training events. Interns are given the opportunity to network with a broad range of psychologists throughout the state. Interns are encouraged to participate in committees of the Arizona Psychological Association. The Consortium also has an APPIC-member postdoctoral residency program. Many interns complete their residency at a Consortium site. The Consortium has a selection preference for applicants from Arizona universities, but applicants from any regionally accredited doctoral program in Clinical, Counseling, or School Psychology are encouraged to apply. Ethnic minorities, international students, and disabled individuals are especially encouraged to apply for internships within the Consortium. Please review the Consortium application procedures at the Arizona Psychological Association website at www.azpa.org.

Program Description

"The following is a brief structural description of the SAPIC 2014-15 Internship Program (subject to change). Internship Structure: Interns will be in their "Major Rotation" 28-30 hours for 3-4 days/week, throughout the year. This will provide a depth of clinical experience and integration into clinical teams. The rotations are: 1) Serious Mental Illness (New Life & Southwest Outpatient Services, 1 intern slot), 2) Children & Families (2 intern slots), 3) Co-occurring Residential Program (Casa de Vida, 2 interns slots), 4) University of Arizona SALT Center (Strategic Alternative Learning Techniques Center, 1 intern slot), and 5) Sierra Tucson Assessment Program (Sierra Tucson, 1 intern slot). Interns will also have 2 6-month minor rotations/opportunities (8-10 hours per week), to provide a breadth of experiences. With each major and minor rotation, the intern will receive one hour of face-to-face individual supervision with SAPIC faculty. We will determine specific structure during the first week of internship. Some possible minor rotation/opportunities are: 1) Adult Outpatient Services: brief therapy with adult clients, individual and group therapy, 2) Thornydale Ranch/Equine Therapy: Serious Mental Illness 3) Child and Family Outpatient Services, 4) Testing and Training: psychological testing and provide clinical training to staff, 5) Psychopharmacology: working with medical staff and attending medical seminars, 6) Program Development: administrative experience, program development and evaluation, 7) SALT Center at the University of Arizona: individual and group therapy, and 8) Self-Design Minor, i.e., Rally Point, veterans support services. In addition, SAPIC is rich in didactic trainings, 5-6 hours of group supervision and trainings weekly and SAPIC interns are expected to present some trainings to agency staff. It is SAPIC's intent to meet the interests of each intern as much as possible, but in our environment, specifics are prone to change. Therefore, intern flexibility and a range of interests are welcome! Our faculty are supportive, collegial, and encouraging of personal and professional growth.

Program Description

"The internship has two tracks: severe mental illness (three positions) and child/adolescent psychology (one position). The program follows a scientist-practitioner model. Interns on the severe mental illness track participate in clinical activities at the Early Psychosis Intervention Center (EPICENTER) where they will receive training in the delivery of evidence-based treatments for psychotic disorders. They will also learn how to score and administer several clinical and cognitive assessments commonly used to track treatment outcomes among individuals with psychosis. Interns on the severe mental illness track also complete three four-month rotations in (i) Brain and Behavior Science; (ii) Community Psychology; and (iii) Sleep Medicine and General Outpatient Psychotherapy. The child/adolescent psychology track offers experience in the outpatient child psychiatry and adult outpatient clinics. The intern will gain experience with learning disability evaluations, evaluations of organ transplant candidates, and an inpatient addiction treatment center.

Program Description

The Arkansas Division of Behavioral Health Services offers a full time (2,000-hour), one-year, pre-doctoral internship in professional psychology to qualified graduate students in clinical or counseling psychology programs. The internship emphasizes generalist training and provides interns with the opportunity to work with diverse patient populations in a variety of settings. Upon completion of the internship, interns are expected to have competencies in assessment and diagnosis, individual and group psychotherapy, diversity, ethics and consultation. The internship year consists of three 4-month rotations: the Inpatient rotation (forensic and adult units), the Adolescent rotation (acute patients and the Adolescent sexual offender program) and the Outpatient/Optional rotation (community mental health). The primary training site is the Arkansas State Hospital; outpatient work is done at Counseling Clinic in Benton, AR. During the outpatient/optional rotation, interns also have the opportunity to pursue 16-24 hours of training per week in clinical areas not offered in the primary rotations. Interns will work with the training directors to arrange these preferred training opportunities in the community. Interns are expected to attend supplemental didactic seminars during the training year. They can choose from Psychiatry Grand Rounds or weekly psychopharmacology presentations. Interns are expected to work 40 hours per week, which includes time spent in didactic trainings and supervision. Annual leave and sick leave are earned on a bi-weekly basis and interns are provided leave time to defend dissertations as well as sit for licensure examinations. The internship site is ideally located in central Little Rock within a major medical complex that includes the University of Arkansas for Medical Sciences, the John L. McClellan Memorial Veterans Hospital, and the Little Rock Community Mental Health Center.

Program Description

Our Clinical Psychology Internship has two tracks, one (2 internship slots) which emphasizes child/adolescent focused training, and one track (1 internship slot) with an emphasis in adult-focused training. It is an internship housed in a supportive, multidisciplinary setting within the University of Arkansas for Medical Sciences Psychiatry Department. Eligible are at least 3rd year declared candidates for Ph.D. or Psy.D. degree in Clinical or Counseling Psychology from APA-approved programs. Applicants must have completed all doctoral requirements except for clinical internship and dissertation (significant progress strongly encouraged). Those who are applying to the child/adolescent track must also have strong child training and experience. In the child track theoretical orientations include behavioral, cognitive-behavioral, humanistic, social learning, systems, etc. Some training may be conducted by child psychiatrists. Year-long major rotations are offered in inpatient and outpatient assessment and treatment. Minor rotations (usually 4 hours/week) vary yearly but often include research and adult treatment. Faculty specialties in externalizing disorders, trauma, and internalizing disorders. The adult-focused intern will train in the assessment and treatment (both individual and group) of individuals with a wide range of disorders, including anxiety, trauma, and chronic severe mental illness. Additional focus includes behavioral medicine through work with patients on a burn unit, with chronic pain, and with neurologic conditions. The intern works in a variety of clinical settings including a University affiliated Community Mental Health Center, Academic medical center general outpatient clinic, and a burn unit. In addition, the intern will have optional minor rotations in neuropsychology, adolescent treatment, and research. Faculty orientations include: behavioral, cognitive behavioral, interpersonal, systems, mindfulness-based cognitive, rehabilitation.

Program Description

The Central Arkansas Veterans Healthcare System (CAVHS) is a two-division, consolidated, VA Medical Center containing medical, surgical, psychiatric, rehabilitation, and nursing home beds. Affiliated with the University of Arkansas for Medical Sciences (UAMS), this VA Medical Center is used as a training hospital for psychiatric, surgical and medical residents and students, as well as students from a diversity of Allied Health Professional training programs. Among its offerings is an APA-approved Psychology Internship program. The medical center is located in a metropolitan area of 528,500 people and draws from a primary service area of 275,000 veterans. The medical center also serves some dependents of veterans and military personnel, and many veterans referred from other VA's for special programs. The Psychology Internship program contains three training tracks. These include General Clinical/Counseling, Health psychology, and Neuropsychology. All three tracks focus on giving the Interns a well-rounded experience in a wide variety of clinical settings. The Health Psychology track is listed with Division 38 of the APA. The Neuropsychology track is listed with Division 40 of the APA. The areas of training offered to Psychology Interns include: Addictions Treatment and Aftercare; Counseling Psychology; Domiciliary and Homeless Program; Geropsychology; Health Psychology/Behavioral Medicine/Primary Care; Neuropsychology; Post Traumatic Stress Disorder, including Vet Center; Mental Health Clinic; and Vocational and Psychosocial Rehabilitation Programs. The CAVHS provides a generalist training experience with an opportunity to gain additional skills in three tracks to include Clinical/Counseling; Health Psychology and Neuropsychology. We also offer Interdisciplinary Post-Doctoral Fellowships in Psychosocial Rehabilitation and PTSD. Little Rock is a great place to live and work. Recreational activities in the surrounding area are abundant.

Std 678 is not to be uploaded with the APPI. APPIC has approved the use of the Std 678 as an additional document for California Department of State Hospital internships. Completed applications must be received by the Internship Director by November 1st of the year prior to the year the internship is to begin. Department of State Hospitals-Atascadero is a

Program Description

Atascadero State Hospital is a state forensic psychiatric hospital serving an all adult male population. The program includes the following components:

- 1) A three week orientation
- 2) A three and a half month, full time rotation on an admissions unit, focusing on psychological assessment of mentally ill forensic patients. Two, four month, three day a week rotations on treatment units that run concurrently with an eight month, 12 hour a week rotation on the Forensic Services Team.
- 3) Completion of 16 psychological evaluations including 6 psychological testing batteries, 8 forensic evaluations, 1 behavioral analysis and treatment evaluation, 1 PCL-R evaluation
- 4) Participation in seminars including: Forensics, Individual Differences and Diversity, Scientific and Ethical Practice, Hare Psychopathy Checklist-Revised/ Risk Assessment, and Professional Issues.
- 5) Completion of 2 ""tutorials"" (structured learning experiences chosen by the intern and the intern's supervisors).
- 6) Minimum of four hours per week dedicated to supervision
- 7) Interns are encouraged to attend training and professional development activities.

Interns play an integral role in establishing training goals and activities for the year. With approximately 60 psychologists on staff, interns have opportunities to gain training/experience in many specialty areas. Within the program structure, each intern's program is tailored to meeting their individual training needs and interests while meeting some basic requirements of the overall program.

ONLY APPLICATIONS THAT MEET ALL APPLICATION REQUIREMENTS WILL BE REVIEWED. APPLICANTS MUST HAVE COMPLETED AT LEAST A TOTAL OF 600 <cf3>DOCTORAL LEVEL <cf1>INTERVENTION 200 ASSESSMENT HOURS (<cf3>face to face, over masters practica<cf1>), AND HAVE FORENSIC EXPERIENCE. COMPREHENSIVE EXAMS MUST BE COMPLETE, DISSERTATION PROPOSAL DEFENDED PRIOR TO APPLICATION. THE PROGRAM GIVES PREFERENCE APPLICANTS WHO WILL COMPLETED THEIR DISSERTATION DEFENSE PRIOR TO INTERNSHIP. THE HOSPITAL DOES NOT HIRE PSYCHOLOGISTS FROM NON APA ACCREDITED PROGRAMS. WHILE THE INTERNSHIP PROGRAM CONSIDERS APPLICANTS FROM NON APA ACCREDITED DOCTORAL PROGRAM THERE IS A PREFERENCE GIVEN TO THOSE FROM ACCREDITED PROGRAMS.

Program Description

200911 Forensic Emphasis, General Rotation: One intern will train with the Forensic Services Team, an interdisciplinary team serving adult offenders court ordered for treatment, conducting group and individual therapy, preparing reports and evaluations for the courts and administering a wide range of psychological tests. The intern will also train at Kaiser Permanente. While at Kaiser, the intern will work in the outpatient chemical dependency program as well as participate in a variety of outpatient opportunities working with mental health professionals in various disciplines. 200912 Forensic Adult & Adolescent Emphasis Rotation: One intern will train with the Forensic Services Team serving court-ordered adult offenders and will also train with the Crossroads Program, an institutional setting for juveniles ages 13-18. This internship rotation presents a unique opportunity to combine a broad general experience with a specialized focus in forensic psychology, combining institutional and community outpatient settings. 200913 Forensic Adult & Child Intensive Rotation: One intern will train with the Forensic Services Team serving court-ordered adult offenders and will also train in a specialized intensive treatment program for children ages 21 and under. The Child Intensive team serves children who are transitioning to community-based services following either a high level and/or out-of-county group home placement, foster care placement, inpatient facility admission, or youth involved in probation. 200914 Child Intensive & Adolescent Emphasis Rotation: One intern will train with a specialized intensive treatment program for children ages 21 and under and with the Crossroads Program, an institutional setting for juveniles ages 13-18. Interns may be assigned or re-assigned to other rotations as such rotations are developed over the internship year.

Program Description

Our internship training program is committed to providing comprehensive training experiences which will foster interns' professional development and personal growth. One of our major goals is to help interns consolidate their clinical and consultation skills into their professional identities as psychologists. In order to facilitate these goals, intensive supervision, seminars, case conferences, and opportunities for consultation with senior staff are provided. The full-time, twelve-month internship provides interns with training in the specific areas of crisis assessment and intervention, brief counseling for personal and career concerns, workshop facilitation, supervision, and consultation and outreach to the campus community. A major focus of the internship is to develop interns' multicultural awareness, sensitivity and competence. Interns have the opportunity to work with a rich diversity of students who have a broad range of presenting concerns and problems. Specialty training may also be available in areas such as eating disorders and substance abuse. Senior staff are a multicultural, multidisciplinary group of professionals (social workers, psychologists, psychiatrists) who work from a variety of theoretical orientations. Staff are actively involved in training and exceptionally committed to the growth and development of all of our trainees. As part of the University Health Services, CPS staff and interns interact with medical professionals to provide coordinated care for Berkeley students.

Program Description

Located on a rural 25-acre campus five miles from the Pacific Ocean, Casa Pacifica is Ventura County's Crisis Care and Treatment Center for abused, neglected and severely emotionally dysregulated children and adolescents. On-site services include a non-public school, certified medical clinic, a day rehabilitation program and a wide range of therapeutic activities. Interns receive high-quality training through a planned programmed sequence of training experiences in: assessment, crisis intervention, psychological testing, individual, group and family therapy, development and coordination of multidisciplinary treatment plans, parent training and behavioral management. As a team member, interns will interact with and provide consultation to several partner agencies, i.e. Ventura County Schools, Public Health, Ventura County Medical Center, Probation and Child Protective Services. Students will be exposed to a variety of diagnoses in children and adolescents including but not limited to Oppositional Defiant Disorder, Conduct Disorder, ADHD, Post Traumatic Stress Disorder, Generalized Anxiety, Phobias, Eating Disorders, Substance Abuse, Borderline Traits, other Mood and Anxiety Disorders as well as other disorders of childhood and adolescents. The primary theoretical orientation is cognitive behavioral; however other orientations are integrated into the program. Training includes 2 hours of individual supervision per week, 3 hours of group supervision and training activities. Weekly seminars designed to address the educational needs of interns are taught by staff psychologists. Evidenced based treatments are introduced and practiced throughout the training year. In addition, Casa Pacifica offers a variety of clinical training workshops throughout the year. Most years, Dr. Donald Meichenbaum conducts a workshop on site in Cognitive Behavioral Therapy. Students with relevant clinical experience are encouraged to apply.

Program Description

In pursuit of our Mission to eliminate the impact of behavioral health problems for all people, Anka recognizes the importance of competent and professional mental health professionals. The goal of our program is to assist the intern in achieving the level of competence expected of a clinical psychologist. From our perspective the achievement of competency means more than theoretical or interventional knowledge. It also means that the individual has acquired an appreciation and respect for the multitudes of diversity in our society, an understanding of how stigmatization and prejudice manifest and affect the individual and society, and how all this impacts treatment. The Anka Behavioral Health, Inc. Northern California Pre-Doctoral Psychology Internship is an intensive, comprehensive, and competency-based training program. The overarching goal is to provide Interns with the tools and guidance necessary for the achievement of competency expected at this level of training.

Please see our handbook for more detailed information: <http://www.ankabhi.org/images/AppicAnkaInternManual%20REVISED%207%201%2013.pdf>

Program Description

Internship is located in an urban Community Mental Health Center with 11 sites across Los Angeles county and nearly 500 staff, offering crisis intervention and short-term counseling services, core mental health services to adults with severe/persistent mental illness and children with serious emotional disturbance, and substance abuse treatment and prevention services. Training activities are focused on 9 competency areas: Individual-Cultural Diversity; Reflective Practice/Self-Assessment; Relationships/Interpersonal Skills; Diagnostic/Assessment; Intervention; Consultation, Education and Prevention; Scientific Knowledge/Research and Evaluation; Professionalism/Leadership/Ethical-Legal; and Supervision/Teaching. Interns provide services in mental health clinics at any of our sites, but those in the child/family track have a primary office in Inglewood, CA while those in the adult track have a primary office in Culver City, CA. All interns participate in individual, group, and family psychotherapy in the office or in the field, crisis intervention, diagnostic intake assessments, comprehensive psychological assessments, community prevention projects, and a small program evaluation or research project. Interns lead group supervision for practicum students and receive "supervision of supervision." Program provides intensive supervision, a didactic seminar, a professional development group, and participation on multidisciplinary treatment teams and in bimonthly agency training seminars. Please visit our website to download the brochure which provides a more complete description of our training program.

In accordance with University policy, candidates who match with us must complete a background check. Final hiring for the internship is contingent upon clearing the check.

Program Description

The overarching objective of the internship training program, an integral element of CAPS organization, is to train ethical, competent psychologists who are capable of functioning independently and will contribute both to the welfare of society and to the profession. The educational philosophy and training model of our internship program is to provide training grounded in core competencies and the scientific principles of our profession, which emphasize the area of applied practice. The training staff realizes that the most important learning occurs through providing service under the direct supervision and mentorship of a senior staff professional. Such "learning by doing" is guided, enriched and deepened through seminars, consultations and in-service staff development activities. Interns have the opportunity to participate in one of the following emphasis areas: eating disorders, multicultural immersion program, sport psychology, behavioral health and stress and wellness.
The internship program is defined by a commitment to the following goals:
Commitment to mentoring and the practitioner-scholar model.
Commitment to a broad range of skill development.
Commitment to training in providing services to a diverse clientele.
Commitment to facilitating personal growth and professional identity.
Commitment to flexibility in developing each intern's training program.
Depending on funding, postdoctoral opportunities may be available for CAPS interns who complete their doctoral degree requirements and are interested in continuing as a Postdoctoral Fellow.
See the website for detailed information about our internship program and CAPS in general.
Our program WILL NOT consider applicants from programs that require additional contracts or evaluations forms filled out (i.e. school specific forms).

Program Description

The San Joaquin Valley (in which all agencies reside) is one of the richest multicultural areas in the nation, including over 100 cultures. Heavily represented are the Hispanic, African-American, and Southeast Asian populations. Each facility serves a diverse clientele and has a sufficient number of clients to meet the training needs of our interns. Each site also has unique populations that it serves. State Center Community College District responds to a large rural geographical area of under-served clients. Stipend - \$20,000. The clients of the PSC-Fresno represent a broad range of ethnic and minority groups with a wide range of psychopathology Stipend - \$18,000. Porterville Developmental Center (Inactive 2011-12) wide range of treatment and rehabilitative services to developmentally handicapped clients as well as court-ordered clients. Stipend - \$36,000 Valley State Prison for Women (Inactive 2012-13) serves inmates with special needs Stipend - \$38,000. Synchrony of Visalia (Inactive 2012-13) provides individual, couples and group therapy to men, women and children. In addition, intellectual, achievement and personality assessments of children, adolescents, and adults are provided. Treatment and rehabilitation programs include neurotherapy and biofeedback. Stipend - \$18,000. The facilities offer an intensive training program covering a broad range of experiences for the internship participants. Areas of concentration include children, community mental health, college counseling centers and forensic psychology. The sites provide varieties of theoretical orientations from which the intern may learn and hone therapeutic skills. The ultimate mission of the consortium is to develop and train individuals for the professional practice of psychology and to provide services to under-served populations. It is the mission of CCPIC to provide the highest possible training for our interns to prepare them for an ever-changing, dynamic role in the mental health system of the future. learn about mental illness associated with criminal behavior and the subsequent legal and ethical issues that ensue.

Program Description

Sutter Center for Psychiatry is a part of the Sutter Health Care System that is located in Sacramento. SCP is a not-for-profit inpatient and outpatient treatment facility serving the urgent needs of children ages five through older adults. SCP operates from the perspective of a Recovery model thus emphasizing the needs of the patient first while integrating a variety of health and mental health programs, including Child & Adolescent Program, Adolescent Partial Treatment Program, Sutter Counseling Center, Adult Care Unit, Chemical Dependency Services; Chaplaincy Training Program. Interns provide a variety of psychological services to children, adolescents, adults and older adults. These include comprehensive psychological assessments, treatment & consultation, crisis intervention and suicide assessment, brief and long term individual psychotherapy, comprehensive treatment planning with a multidisciplinary team and co-facilitation of psychotherapy groups. Interns will participate in a variety of trainings, and will be expected to present trainings themselves. San Quentin is California's oldest and best known correctional institution. The prison houses approximately 5,000 male inmates and includes a reception center for new commitments, a parole violator unit, administrative segregation units, endorsed population units, and a minimum security work crew unit. It is also the state's only death row facility for male condemned inmates. Interns will gain clinical and assessment experience with acute and chronically mentally ill inmates in an outpatient setting and inpatient crisis setting. Interns will also have the opportunity to gain training and experience with differential diagnosis, crisis intervention, psychopathology, malingering of psychopathology, and working with patients from various cultural and ethnic backgrounds. In addition, they will to-one and small group formats. On average, interns spend 5 to 6 hours each week in supervision. In addition, interns acquire substantial experience functioning within multidisciplinary teams that include psychologists, psychiatrists, social workers, education specialists, and a variety of other mental health professionals. The Center serves a diverse population including Latino, African-American, Asian-American, and Euro-Americans. Services are provided to families from a broad range of socioeconomic backgrounds, with the majority of the families being Medi-Cal recipients. We work with families within the broader community setting, with a major emphasis on coordinating with other resources and agencies. Significant strengths of the internship include dedication to providing high quality of supervision, and the array of clinical options available to interns. Students from diverse backgrounds, especially those with fluency in Spanish, are encouraged to apply. An additional stipend is provided to those interns who can provide services in Spanish as well as English.

Program Description

The Mid-Coast Internship Consortium (MCPIC) is made up of four sites along the Central Coast of California: California Men's Colony (Inactive 2014), North Kern State Prison (Inactive 2014), Coalinga State Hospital. MCPIC is one of four consortia that make up the Golden State Psychology Internship Association (GSPIA). Prospective interns apply directly to GSPIA, which is located in Fresno, California and specify for which sites they would like to be considered. An intern works at only one site, but training is shared amongst the sites and at the Fresno location. California Men's Colony and North Kern State Prison inactive 2013 and will not accept applications. The MCPIC aspires to provide a broad range of training with a diverse, multicultural population of clients. We place a strong emphasis on the intern as a developing colleague. Each intern has an individualized training plan tailored to allow them to work from their strengths and areas of interest while developing skills in new areas. MCPIC is a member of APPIC. Comprehensive information is available on our website at www.alliant.edu/fresno/ccpica/index.htm

Program Description

The Sullivan Center for Children is an intensive outpatient treatment center that specializes in providing psychological services to children, adolescents and their families. The Sullivan Center is a Psychological Corporation currently employing nineteen clinicians, including one psychiatrist, three Psy.D. psychologists and three Ph.D. psychologists as well as one Licensed Marriage Family Therapists. Additional clinical staff is comprised of seven post-doctoral fellows. We use an integrated team approach in which, if appropriate, children and members of their families can be involved in an integrated treatment approach using more than one modality. Our general procedure is to assess the presenting problem and outline an individual treatment plan for the child and family. The population treated varies greatly in terms of age, type of pathology, socio-economic status, and cultural backgrounds. We deal with problems of childhood that range from mildly to severely disturbed. Often times our clients have had previous treatment in hospitals, residential treatment centers or day treatment programs. We are dedicated to treating individuals intensively to help avert hospitalizations or placements in residential treatment. The ages of clients treated at the Center run from infancy through older adulthood, although adults treated at the Center usually arrived at our services through a child or adolescent problem. The Center is a for-profit corporation. We have established contracts with the local school district and The Central Valley Regional Center. Additionally interns are exposed to pediatric psychiatry and issues in forensic psychology.

Program Description

Kaiser Permanente, Fresno, provides generalist training in our psychology internship program. We use the Local Clinical Scientist Model (Striker and Trierweiler, 1995) as the basis of training. Supervising psychologists represent a wide variety of clinical orientations within a culturally diverse, multi-cultural setting in the San Joaquin Valley. Major rotations include: Adult, Child, Intensive Outpatient-Adult, Intensive Outpatient-Adolescent, and Behavioral Medicine. Minor exposure is also available in Chemical Dependency and Chronic Pain Management. Our interns give to the community by providing 3 hours of school related counseling to students at the School of Unlimited Learning in downtown Fresno. Interns have opportunity to provide individual, group and couples therapy. With over 20 groups per week, there are many from which to choose. There are also several psycho-educational classes interns may lead.

Candidates selected for the position must complete the sign-in process by the date that employment begins. This includes signing the Oath of Allegiance and presenting verification of work authorization status and completing Section 1 of the I-9 form. Under Federal law, CSUF may employ only individuals who are

Program Description

The doctoral internship at California State University, Fullerton CAPS is designed to be a forum for advanced learning of and practice in the art and the science of psychology in a setting where the open-ended nature of development is recognized and valued. Our overarching goal is to facilitate the development of psychologists who are able to practice competently and independently in a number of domains. While we recognize that one's doctoral internship setting may not be reflective of one's ultimate career path, our program is designed with an emphasis on strengthening skills in areas that are typical of professional work in university counseling center settings. We aim to train generalists who are adept in providing competent and effective psychotherapy, assessment, and crisis intervention for diverse populations and communities within a brief model. We value a philosophy of wellness and prevention, which is exemplified in the practice, and actively guide students through the process of incorporating evidence-based practices into their clinical work across rotations and through didactic experiences.

Program Description

The primary focus of the internship program is to train interns to become professional psychologists who can competently provide a full range of professional activities with diverse populations. The Counseling Center provides a broad range of counseling and mental health services to the university community, including individual, couples and group counseling, crisis intervention, assessment, and consultation to faculty and staff. The Center works in active collaboration with other units on campus, and is strongly committed to outreach and consultation to the university community. Interns are actively involved with outreach activities and also may have an opportunity to co-teach select academic courses with professional staff members. Interns are involved in the full range of Center activities, and work closely with the senior staff in mentoring relationships. Training is based on a Practitioner-Scholar model which emphasizes the practice of psychology in a contemporary Counseling Center setting. The UC Irvine program has a longstanding commitment to diversity issues and to valuing the importance of cultural and individual differences among our staff and interns. Our staff is diverse in terms of ethnicity, race, sexual orientation, gender, age, and ability. We have been fortunate to recruit a highly diverse group of outstanding interns over the years. In addition, UC Irvine has an extremely diverse student body, providing interns with the opportunity to gain specialized training and experience in multicultural counseling.

Program Description

WYS is a child and family community mental health agency serving the needs of vulnerable children in Orange County. Interns provide, and are trained in evidence based family therapy (including FFT), evidence based child therapy (including PCIT), individual therapy (including TF-CBT), parenting (including Incredible Years), psychological testing, and consultation with school and social services staff. Western Youth Services currently has 10 licensed psychologists who all participate in one or more aspects of the training program (e.g. teaching, supervision, co-therapy) and 4 registered psychologists who often serve as mentors for our interns. Our training program exists in one agency, but within four different clinics. Intern positions are located in 1 of 4 clinics in Orange County including North Anaheim, Fountain Valley, Mission Viejo, and Santa Ana. Interns are required to have transportation during work hours as seminars occur in several of our clinics and clients may be seen in the clinic or in the schools. All clinics provide opportunities for evidence based trainings to include Parent Child Interaction Training (PCIT), Functional Family Therapy (FFT), Trauma Focused CBT (TF-CBT), Incredible Years and dyadic play therapy. Since 2011, Western Youth Services has been collaborating with Vanderbilt and Indiana University on an NIMH funded research project exploring the efficacy of various supports to training in an evidence based care program to see which supports lead to greater clinical competence. Specifically, we are looking at whether client feedback on alliance, counseling process, and supervisor feedback on model adherence improve speed and quality of evidence based therapy provision.

Program Description

In accordance with the mission of the agency, which includes "quality professional training in a range of mental health disciplines," the primary goal of the psychology training program is "to provide supervised experience and training that contributes in a significant way to each intern's competency in the clinical assessment and treatment of child and adolescent emotional, behavioral, and interpersonal disorders, in a multi-disciplinary, outpatient community clinic setting." Specific objectives include (1) contributing to the pool of mental health professionals, individuals who are trained in working to ameliorate the problems of children, adolescents, and families; (2) contributing to the pool of multicultural and bilingual practitioners; (3) preparation to work effectively as psychologists in a contemporary multidisciplinary, public-funded community mental health environment; (4) effectively facilitating each intern's transition from theory to practice, from advanced student to professional practitioner; (5) providing an experience that helps interns integrate the science and practice of psychology; and (6) preparing interns for licensure at the independent level of practice. Training is organized, broadly-based, and structured to meet both program and individual intern objectives. The year includes experience at ancillary sites to supplement the core training experience, and includes seminars, workshops, and other didactic components. The core training element is supervised clinical experience in all aspects of outpatient and field-based direct service delivery to children, adolescents, parents, and families, including mental health triage, intakes and assessments, psychological testing, clinical case management, a range of psychotherapeutic interventions and modalities, clinical case consultation with other treatment staffs, schools, and agencies, crisis intervention, termination planning and discharge. Interns also choose from four electives: school-based prevention and early intervention groups, multidisciplinary assessment team evaluations, pediatric oncology rotation at Miller Children's Hospital, and pediatric rehabilitation at Miller Children's Hospital.

Program Description

The VA Long Beach Doctoral Internship Program has been fully accredited by APA since 1980, with our next site visit in 2019. Our primary goal is to train interns to conduct an array of psychological services in a general health care facility. Although our psychology staff provide some very specialized services, we believe that training at the predoctoral level should be broadly based rather than narrowly focused. The generalist training that we provide reflects the population of our medical center and outlying clinics. We serve primarily adult veterans and some active military service personnel, the majority of whom are male but with a higher percentage of women in younger cohorts. We've been known for our behavioral health training as well as more traditional psychological services. As with all health care systems, we have undergone a major shift from inpatient to outpatient treatment in both medical and mental health settings. We accept both clinical and counseling students and no distinction is made between them concerning the content of training experiences. We tailor our internship program to the specific needs of each intern. During orientation week, all staff psychologists present to the interns and practicum students to explain what training experiences their rotation offers. With the advisement of the Training Director interns select 4-5 rotations that blend their individual training needs and interests. Our program follows a traditional apprenticeship model where the intern works closely with her or his supervisor. The degree of responsibility and structure afforded the interns depends on their level of experience coming into each rotation. Our program also includes intern seminar, grand rounds, journal club, release time to attend any offered trainings needed for CA licensing at local sites, and other rotation-specific didactic and interdisciplinary experiences. Intern offices are located in the same area to foster close interaction.

Program Description

Interns in the General Track provide services focusing on recidivism reduction and aftercare to incarcerated individuals at the Twin Towers Correctional Facility and to women recently released from custody at the Women's Community Reintegration and Education Center. The population served may be diagnosed with severe/persistent mental disorders, mood disorders, and PTSD. A large majority present with co-occurring disorders. Interns conduct clinical assessments focusing on diagnostics, treatment needs and reintegration into the community. Group and individual treatment utilizes Seeking Safety, DBT, and CBT techniques. The Foster Care Track is a field-based, treatment program for children in out-of-home placement. This program represents a collaboration between the LACDMH and the Department of Child and Family Services (DCFS) to address the unique needs of these children. Treatment focuses on psychiatric rehabilitation and skills building, crisis intervention, functional and developmental assessment as well as community outreach. At each track, supervisors have been trained in a range of theoretical orientations. Students are provided with a minimum of two hours of individual supervision and two hours of group supervision per week in accordance with state and American Psychological Association (APA) requirements. Formal training includes weekly didactic sessions and various relevant trainings offered by the LACDMH. In addition, students are offered a wide range of additional training opportunities such as case conferences, staffing meetings, Department of Psychiatry Grand Rounds, and outside trainings through LACDMH. Bilingual/Multilingual candidates are encouraged to apply. Recruitment for, and acceptance into, the internship program conforms to the Los Angeles County Policy of Equity (http://file.lacounty.gov/bos/supdocs/070111_Equity.pdf) and all APPIC selection rules.

Program Description

APA-Accredited one year full-time predoctoral internship in clinical psychology in a staff model health maintenance organization. Interns work in the Outpatient Department of Psychiatry. We have a generalist practitioner model - our training emphasis is on providing direct services to clients, utilizing a variety of treatment modalities. The program trains interns in psychotherapeutic intervention (individual, family, couples, group) and psychodiagnostic assessment (including use of projectives). Up to 20% of each week is available for an elective experience - these include health psychology, neuropsychological assessment, couples therapy, or more intensive work with children (including assessment for autism). Interns may also elect supervised experience working one day each week at the Watts Counseling and Learning Center (providing child therapy and assessment in a community based setting). Interns receive didactic training in Assessment, Intervention, and Professional Issues. Interns receive 3-4 hours of individual and 1 hour of group supervision weekly with multiple supervisors. The clinical experience is with clients of varying ages (child and adult), both sexes, and various degrees of psychological disturbance, from a wide range of socioeconomic, racial and ethnic backgrounds. Interns work in multidisciplinary teams alongside psychiatrists, psychologists, social workers, nurses, and marriage and family therapists.

Program Description

The primary goal of the predoctoral training program is to provide a year of intensive exposure to a wide variety of clinical experiences. The training is designed to maximize the personal growth of each trainee. At the beginning of the year, the trainee designs her/his program, both to supplement and complement previous development. We prefer that the trainee train in areas s/he has not experienced or in areas less available elsewhere. Within the learning settings chosen by the trainee, every effort is made to teach the specific techniques necessary to gain competence. The great variety of resources makes both the individualized choice and the acquisition of skills possible. Since the exposure to, learning in, and thought about clinical or human service experience is designated as the first priority, treatment, supervision, consultation, and assessment experiences are given priority in the assignment of the trainee's time. Seminars are clinically focused, with a basic foundation in research. The integration of service and research is another important emphasis of the program but, in terms of time allocation, research has been given a lesser role.

Program Description

The UCLA-CAPS Internship provides an intensively supervised experience in delivering mental health services in a rapid-paced clinical setting. The CAPS training program adheres to a Scholar-Practitioner model. We train our Interns to be generalists, with particular expertise in working with a college population. Interns receive training in empirically-supported brief individual and group therapy, interpersonal process group therapy, emergency response, crisis intervention, psychological assessment and diagnosis, campus prevention and outreach, and ethical and legal regulations and practices. Formal and informal didactic settings complement these clinical experiences.

We regard our doctoral Interns as professionals in training; accordingly, the training program is developmental in its focus. We believe that professional development and competency as a newly-practicing psychologist results from cumulative and developmental immersion in broad clinical experiences supported by skilled professionals serving as teachers, supervisors, and role models. After a year of close supervision, we expect Interns to have developed an increased level of clinical competence and autonomy, heightened professional identity and ethical awareness, an enhanced understanding of self in preparation for independent functioning as psychologists.

An appreciation of human diversity is a cornerstone of our program. Our highly diverse staff trains Interns in the competent provision of services to UCLA's pluralistic student body. The diversity of our staff and our clientele provides Interns with an unusually rich opportunity to gain experience and expertise with a broad spectrum of diverse clients across a full range of health and psychopathology. Over the course of the year, Interns are expected to refine their sensitivity and competence in service delivery to students of varied racial, cultural, religious, gender, sexual orientation, physical age groups. Please see our website: www.counseling.ucla.edu.

Program Description

The University of Southern California University Center for Excellence in Developmental Disabilities(USC UCEDD) at Childrens Hospital Los Angeles (CHLA) offers a comprehensive Clinical Child Pediatric Psychology Predoctoral Internship Training Program. This American Psychological Association (APA) accredited training program offers two required placements and one specialty placement in a variety of departments and clinical services. The two required clinical placements represent generalist skills of a child-focused psychologist: Child/Family Therapy and Psychological Assessment. The specialized placement focuses on an area of specialty practice which currently include: Pediatric Psychology, Early Childhood Mental Health, Assessment Consultation and Evaluation, Trauma Psychology, or Adolescent Medicine. The training program is designed to prepare doctoral candidates to assume the role of a practicing professional in both the private and public sectors of mental health care and psychology practice. Through didactic lectures and seminars, intensive supervision, and ample direct patient contact, interns receive comprehensive experience in quality psychology training which engages them in psychological assessment treatment/therapy, consultation, and community involvement. The internship program provides training in the principles of psychology as applied to pediatric behavioral and developmental disorders through supervised experience in outpatient mental health clinics, community clinics and/or pediatric hospital units.

Program Description

The Psychology internship at West LA is a generalist program accepting students from APA-accredited programs in clinical and counseling psychology. The philosophy of the internship is based on a scientist-practitioner model and emphasizes practice informed by scientifically-based clinical research. The internship is geared to provide direct clinical experience with adult military Veterans in outpatient and inpatient mental health and medical settings. This full-time, 12-month program begins on August 11, 2014 and consists of four 3-month rotations. There are 7 internship positions, with 4 positions in the General Track and 3 that are funded through Geropsychology. Interns in the Geropsychology track complete two of their four rotations in geriatrics (Geropsychology and Geriatric Medicine). Major rotations include: Outpatient Mental Health, the Domiciliary Residential Rehabilitation and Treatment Program, Forensic Psychology, Geriatric Medicine, Geropsychology, Health Psychology, Neuropsychology, and the Substance Use Disorders Outpatient Program. Selection of rotations is based on the intern's interests, goals, and gaps in training. In addition to the four clinical rotations, interns follow at least two patients for long-term psychotherapy.

There are rich opportunities for education and research. Two weekly seminars (the Intern Seminar and the Assessment Seminar), a bimonthly seminar (the Diversity Seminar) and a monthly lecture series (the Evidence-Based Psychotherapy Lecture Series) are offered during the year. In addition to these required didactics, there are many additional learning opportunities, including Psychology Department workshops, weekly Mental Health Grand Rounds, and rotation-specific lectures and conferences. Interns are required to become involved in a clinical research project consistent with their interests. In addition to the required research project, interns are allowed 4 hours of research time each week for independent projects.

Program Description

Located in the heart of downtown Los Angeles, LAACC is an ambulatory care facility that provides comprehensive medical and mental health services to an extraordinarily diverse population of veterans. Our pre-doctoral internship program provides a unique model of generalist training through didactic, experiential, and supervisory activities in a number of outpatient mental health areas. Our mission is to provide training that prepares interns for the duties typical of a psychologist in a outpatient setting. With this in mind, we provide training in a whole spectrum of outpatient and community mental health services. We offer practical experience, didactic training, and intensive mentoring in order to help our interns master our required competency areas. Our mental health programs include: outpatient mental health, behavioral medicine, post-traumatic stress disorder, addictive behavior treatment, dual diagnosis, primary care mental health integration, psychosocial rehabilitation and recovery, woman's trauma and recovery, and psychodiagnostic assessment. The goal of training at LAACC is to provide a generalist, outpatient, community-based program that educates interns through intensive and diverse patient-care experiences. The clinic is housed in a 5 story state-of-the-art building, and is part of the VA Greater Los Angeles Health Care System. Our psychology service consists of six full-time psychologists, four part-time psychologists, and an administrative assistant. All staff psychologists participate actively in the psychology pre-doctoral internship training program. There are usually 2 psychology practicum students who receive training through our program each year as well. LAACC is closely connected to the East Los Angeles Neighborhood Clinic, a VA facility located about eight miles away in a largely Latino community. For further information, please email us for our brochure. You can also see our brochure by visiting our website: www.psychologytraining.va.gov/losangeles

Program Description

CII's Pre-Doctoral Clinical Psychology Internship is a full-time intensive clinical experience, interweaving the science of psychology and the professional practice of psychology, which includes the application of relevant theory and research. While the overarching theoretical orientation is an integrative ecosystemic approach, interns are exposed to a variety of treatment modalities, including individual, family, larger-systems interventions/consultation, group, play therapy, trauma-focused cognitive-behavioral therapy, and other evidence-based therapies. A major emphasis in didactic training and clinical supervision is to develop emotional intelligence and multicultural competence through cultural values clarification, use of a "social dreaming matrix," construction of personal genograms, and promotion of awareness regarding ethno-cultural countertransference. Psychology Interns attend weekly seminars in Early Childhood Interventions, Trauma-focused Cognitive-Behavioral Therapy, and Family Systems Therapy. In addition, we have developed two sub-tracks for which applicants are matched independently: a Bilingual-Bicultural Track (5 Intern positions) which requires fluency in Spanish or Korean and practicum experience with Latino or Korean-American Children and Families (about 1/2 of the Intern cohort is assigned to this year-long rotation); and an Early Childhood Internship (3 Intern positions) which requires interest and/or experience with early childhood (children 0-5 years old) assessment and/or interventions; Spanish-language fluency is preferred. All applicants are required to have a minimum of 500 total hours practicum experience by the application date, preferably with children and families.

Program Description

NOT UPDATED RECENTLY. CONTACT PROGRAM FOR MORE INFORMATION Established in 1989, IMCES has trained dozens of clinicians (PhD/ PsyDs, MFTs, MSWs) to integrate and apply cognitive behavioral, psychodynamic and family systems based interventions with clients from every socioeconomic background and ethnicity. Multicultural awareness and evidenced based practice are the two guiding principles of IMCES's training philosophy. The training program's philosophy follows a practitioner-scholar model of training, committed to the scientific method of enquiry. This paradigm seeks a balance between familiarity with clinical psychological research and practical application of this knowledge. The philosophy of the training program advances IMCES's mission to provide culturally responsive, competent and linguistically appropriate services. Interns participate in a variety of clinical programs that serve individuals and families from a broad range of cultures and ages. Interventions take place in a variety of settings, both in the office and the field, which includes schools, homes and residential placements (board & care, shelters etc.). We work with families within the community setting, with a major emphasis on coordinating other resources. IMCES provides intensive supervision, multiple didactic seminars (Psychotherapy, Diversity, Assessment, Laws & Ethics - and more), and participation in multidisciplinary treatment teams. IMCES seeks to provide an opportunity for pre-doctoral students to learn to apply and demonstrate intermediate to advanced skills of direct clinical psychology services, in an ethical, culturally sensitive and competent manner. Upon completion of the program, the intern should exhibit greater capacity for self-awareness and self-evaluation, a commitment to the highest standards of professional practice, continuing education, and clinical skills commensurate with their professional level of development.

Program Description

We offer a full-time APA-approved Clinical Psychology Internship Program sponsored by VA Northern California Health Care System (VA NCHCS). We believe that internship training must prepare future psychologists to work as skilled independent practitioners and consultants in multi-specialty and multidisciplinary teams that include other mental health professionals, primary care physicians, and allied health professionals. We are committed to training generalists with broad clinical and consultation skills. However, we also facilitate the growth of skills in areas of specialization. As such, we provide interns with training experiences that allow them to develop preliminary competencies in specialty areas and prepare them for more intensive post-doctoral education and training. Internship training objectives within all rotations are designed to build upon basic clinical competencies acquired in graduate training, and are organized into six broad areas: assessment; psychotherapeutic intervention; interdisciplinary consultation and treatment team participation; ethical and professional development; scholarly inquiry; and cultural diversity. In addition, there is a strong emphasis on both didactic and experiential training through weekly didactic seminars, intensive individual and group supervision, and participation in training workshops. Please visit program website for more complete description

Program Description

The training follows a multicultural, developmental apprenticeship model. It is expected that interns progressively develop from students with doctoral level training in the field of clinical/counseling psychology to entry level professionals who are able to practice more independently. The internship program is designed to provide 1,800 - 2,000 hrs of supervised clinical experience. At least 6 hrs per week are spent in training activities. Didactic seminar focuses on issues relevant to the practice of psychotherapy and professional development. Outreach seminar focuses on learning theories of prevention and how to prepare and assess workshops. Assessment seminar focuses on assessment issues in counseling centers. Diversity seminar focuses mostly on personal awareness so that each intern may develop into a multiculturally competent practitioner. Most of the seminars involve regular assigned readings. Interns also participate in 1-hour case conference each week with all CAPS staff, 1 hour of individual supervision with their primary supervisor, and 1 hour of individual supervision with their secondary supervisor. Interns are expected to provide individual, couples and group psychotherapy, and psychological assessments. The total number of clinical hours scheduled will not exceed 26 hours per week. Interns will also conduct outreach presentations to the campus community under the direction of the Outreach Coordinator. Interns are expected to enter the training year with foundational knowledge of psychological assessment instruments, as performing psychological assessments is an integral aspect of training. Instruments utilized at CAPS include, but are not limited to, the Wechsler Adult Intelligence Scale-Fourth Edition, Wechsler Memory Scale-Fourth Edition, Wechsler Individual Achievement Test-Third Edition, Delis Kaplan Executive Functioning System, Wisconsin Card Sorting Test-64 Card Version, Rey Complex Figure Test, Minnesota Multiphasic Personality Inventory-II RF, Millon Clinical Multiaxial Inventory-III and the Trauma Symptom Inventory-II.

Program Description

The program subscribes to a "general practitioner" training model with emphasis on public service to the severely mentally-ill. Focus is upon theory and practice of psychological assessment and treatment, particularly as applied to severely disturbed forensic and civilly-committed inpatient population. Seventy-five percent of the 1150 patients at N.S.H. receive treatment under forensic commitments, the majority of which are Incompetent To Stand Trial, and Not Guilty By Reason Of Insanity. This is not a formal forensic internship per se, and there are no opportunities to conduct court evaluations. Orientation to forensic psychology includes an intern forensic seminar series, select training in forensic assessment (e.g. risk assessment), hospital-wide forensic training, and opportunities to participate in forensic case-consultations. Orientation to neuropsychological assessment and screening in intern assessment seminar. Opportunity to conduct 4 full neuropsychological assessment batteries if skills in cognitive/emotional assessment at expected level. Intern year divided into two, 6-month rotations. Intern spends 16-20 hours per week on an inpatient unit performing duties of inpatient psychologist (e.g. individual psychotherapy, group treatment, treatment planning and evaluation, consultation, crisis intervention, development and implementation of behavior plans). Intern also treats minimum of three patients in long-term individual psychotherapy (1X or 2X per week). Treatment orientation of training staff is largely psychodynamic and, to a lesser degree, cognitive behavioral. Intern completes 10 full psychological assessment batteries during training year. Intern attends three, 90-minute seminars per week. Finally, intern receives a minimum of 5 hours of individual, face-to-face supervision per week, including 1 hour per week for each individual psychotherapy client, 1 hour for assessment, and 1 hour for work at the rotation site (inpatient unit).

Program Description

Located in the suburbs of Los Angeles, The Sepulveda Ambulatory Care Center is one of the major components of the Greater Los Angeles VA Healthcare System. Sepulveda is a UCLA-affiliated hospital with training programs in medicine, psychiatry, and other mental health disciplines. The VA Sepulveda Predoctoral Internship in Psychology is a generalist program based on the practitioner-scientist model. The program is structured to provide breadth of training through supervised patient care and didactics. Our goals are to provide interns with a broad range of training experiences in assessment, evidence-based interventions, and consultation with a diverse selection of patients in medical and mental health settings. The training year consists of both year-long training experiences as well as rotations that are on a trimester basis. Interns participate in three rotations from the following: 1. Addictive Behaviors/Clinic; 2. Health Psychology: Behavioral Medicine; 3. Health Psychology: Geriatrics and Home-Based Primary Care; 4. Mental Health Recovery and Intensive Treatment; 5. Primary Care Mental Health Integration; and 6. Women's Clinic. Full-year practica/seminar placements include: Evidence-Based Practice, Couples/Family Therapy, and Neuropsychology. A six month placement in the Sleep Clinic is available as an elective specialization. Numerous didactics are offered, including the weekly General Intern Seminar, Supervision Seminar, Psychology Brown Bag Lunch Event (PsyBBLE), and VA-sponsored Continuing Education Workshops. Attending staff are all dedicated to training. Several of the most recently hired staff are previous trainees who are bringing vitality, creativity, and innovation to the provision of services to our Veteran patients. There is an increased focus on the acquisition and refinement of skills in evidence-based treatment especially for PTSD, anxiety disorders, and depression. Primary Care programs have been redesigned to include delivery of care in patients' homes. Sepulveda is one of the polytrauma network sites serving Veterans with brain injuries. This is an exciting time to be at Sepulveda.

Additional Information About Training Opportunities

In addition to year-long training experiences and rotations, interns are expected to start at least one group therapy program in areas of interest to them. Interns are also expected to prepare formal presentations to the psychology department. These involve one case presentation and one presentation on their research (either dissertation or research involvement during internship year). There are also opportunities to present at Psychiatry Grand Rounds.

Program Description

A variety of training opportunities are available within the context of a community mental health setting. Interns receive experience working with a general outpatient population of children and families, with children who are victims of abuse, in a nonpublic therapeutic milieu day school for severely emotionally disturbed children, and/or in a specialized program designed to meet the needs of juvenile offenders and youth who have co-occurring substance abuse and mental health problems. In all programs, interns provide individual, family and group therapy. All interns provide psychodiagnostic assessment (testing) and intake evaluations, and participate in a variety of year-long seminar experiences, including the assessment seminar, the clinical issues seminar, cultural competence training, and family therapy team training. Supervision is provided by senior staff, and occurs in both one-

Program Description

Our internship subscribes to a Developmental-Practitioner Model in which intern learning is viewed as a developmental process that occurs through the practice of professional psychology activities. The training curriculum is developmental in nature with increased challenge and complexity throughout the internship year. We offer a variety of training experiences including Professional Seminars (including Multicultural Competence Seminars), Training Modules, Intake/Case Disposition Meetings, Case Conference, and Professional Development. Supervision includes weekly individual, one-on-one supervision, with a Primary and Secondary Supervisor; supervision of group therapy; and Video Group/group supervision. CSUN is a very diverse urban campus and has been officially designated a Hispanic-Serving Institution and Minority-Serving Institution. This population provides interns with the opportunity to work with a wide variety of clients with diverse DSM-diagnoses. Interns provide the same types of clinical and outreach services offered by our professional staff including intake/clinical assessment, individual and couples therapy, group counseling (process/therapy and structured), crisis intervention, case management, outreach, consultation, and referrals. Short-term individual therapy and group counseling are the primary means of service delivery at UCS; however, interns have the opportunity to work with several clients in long-term therapy. Professional staff members promote intern learning through observational and experiential learning opportunities, supervision and training, serving as role models and mentors, and offering challenge, feedback, and support. Interns collaborate within a multidisciplinary setting that provides them with rich opportunities to learn from our staff from a variety of disciplines, theoretical orientations, professional interests and specializations, and backgrounds.

Program Description

Children's Hospital & Research Center at Oakland is a 191-bed regional and international resource for advanced pediatric care, research and medical education, with Northern California's only pediatric trauma center, the region's largest pediatric intensive care unit, and the services of thirty pediatric subspecialties. Our trainees (Pre-docs & Fellows) are an integral part of our primary placement sites offering a wide range of treatment and evaluation services to our patients and their families. Psychotherapy, assessment and psychiatric services are provided on an out-patient basis and emergency room evaluations are available to patients 24 hours per day. We treat children with challenging mental health disorders including OCD, bipolar disorder, PTSD, Tourette's, and a range of difficulties associated with acute and chronic medical illnesses involving pain, trauma, disability, medication compliance, and loss and bereavement issues. We also provide services to specialized populations such as young children, foster children, kids with ADHD, developmentally delayed kids, etc. We offer rotations to each site, and weekly seminars in topics such as Family Systems work, Child Psychotherapy, Assessment, and pediatric psychology, and our students may participate in the hospital's training events including Grand Rounds, daily Noon Conferences on pediatric topics, and workshops offered by the Division. Applicants apply to one of two primary sites: either the Dept. of Psychiatry, or the Behavioral Pediatrics Clinic. Sites will have a common seminar and share rotations We welcome applicants from a variety of programs and backgrounds, and are particularly interested in applicants who are bilingual, multicultural, or interested in working with children and families facing cultural, economic, psychological, and health challenges.

Program Description

WCC is a private, non-profit community psychology clinic that provides comprehensive psychological services to children, youth, their families and caregivers. Our clients represent a variety of racial, ethnic, cultural and socioeconomic groups. Many of our clients come from disrupted families. Many are involved with the foster care system. The primary theoretical orientations of the program are psychodynamic and systems informed by current research and literature. Assessment training is based in the therapeutic-collaborative model. Interns work in the community (i.e. homes and schools) as well as in the clinic. Applicants should have prior clinical experience with children, youth, and families/caregivers; solid background in developmental theory, trauma and attachment theory/research; coursework and experience with psychological assessment and child assessment. Rorschach training (Exner or R-PAS) is required by start of internship; experience is preferred. Successful applicants will have ongoing commitment to increasing awareness of cultural and individual diversity. Approximately 60% of intern time is spent in direct service, 13% in supervision, and 26% in training. Because interns must travel in the community at times, personal transportation is required. Minority students, bilingual Spanish-speaking students, and men are strongly encouraged to apply. See online brochure for additional description.

Other Application Requirements

Applicants matched to the internship should understand that prior to beginning the internship they will be required to successfully pass a required brief medical examination, which includes a drug test. TB testing will also be required. Applicants will also undergo a required background test which CHOC requires of all employees in order to ensure the safety of our pediatric patients.

Program Description

The goal of the internship program at Children's Hospital of Orange County (CHOC) is to prepare individuals for their professional career as psychologists working with children, with specialty training in a hospital setting. The focus of the training program is on clinical activities, but we believe these activities must be based on strong scientific evidence. Internship training at CHOC includes a strong practice component coupled with a variety of supervision and didactic seminar experiences. As much as possible training is individualized to allow interns the opportunity to develop additional skills in their areas of interest as well as the opportunity to learn skills in new areas. For those interns who speak Spanish, there is the opportunity to participate in a specialty seminar designed to increase comfort and competence in providing psychological services in Spanish as well as supervision in Spanish. During the year interns participate in major rotations with the opportunity to work with oncology, young children, and neurology. Minor experiences are also available (such as psychopharmacology, endocrinology). In all of these capacities interns are an integral part of the multi-disciplinary medical teams. All interns participate on a hospital wide consultation and liaison service, conduct psychological and neuropsychological assessments (in both English and Spanish), provide outpatient therapy (both for traditional child outpatient referrals as well as medical conditions), receive training in behavioral emergencies and attend seminars. CHOC provides many opportunities for working with families from a wide range of cultural and socioeconomic backgrounds. CHOC welcomes applications from applicants with a special interest in working with multicultural families.

SCIC is a captive site, and is only available to American School students at the Orange campus.

Program Description

Southern California Internship Consortium is a captive site, and is only available to American School students at the Orange campus. We offer two partner sites, the Argosy University Clinic, also known as AUTAPS, as well as Saddleback Community College. The internship offers a balance between psychological assessment and psychotherapy. Furthermore, both sites offer opportunities for crisis intervention, community outreach and providing consultation to practicum students. SCIC is associated with the American School of Professional Psychology at Argosy University, Orange County.

Program Description

The VA Palo Alto Health Care System Psychology Internship program is committed to the scientist-practitioner model of psychology. The internship program at VA Palo Alto is a member of the Academy of Psychological Clinical Science, a coalition of doctoral training programs and internship sites that share a goal of producing and applying scientific knowledge to the assessment, understanding, and amelioration of human problems. Palo Alto has many strengths in training including opportunities to gain both breadth and depth in multiple areas. There are opportunities for training in interventions with adults and families and in psychological/neuropsychological assessment within: geriatric settings; medically-based settings including primary care, specialty medical clinics, and rehabilitation; inpatient, residential, and outpatient mental health settings; trauma treatment settings; and substance use disorder treatment settings. We also offer rotations to enhance skills in clinical research and program evaluation. Our limitations include few clinical opportunities to see children, except as part of family treatment, or to work with developmentally-disabled adults. Assignment to rotations and selection of supervisors is based primarily on the intern's training needs and interests, and are determined after the Match. The internship year is divided into two six-month periods. Within each 6-month period, interns spend half-time at each of two sites. There also are some optional mini-rotations that require from 3 to 6 hours per week, which add extra hours to our basic 40 hour work week. In addition to training assignments, interns have Wednesday afternoons set aside for a year-long intern seminar series. We believe that psychologists should be prepared to work as members of interprofessional health care teams, interacting collaboratively with the full range of disciplines that provide health care services. Most of our care settings are interprofessional.

Program Description

Pacific Clinics is one of the largest community behavioral health care agencies in the Western United States. The programs are based upon a community orientation designed to serve the more disturbed members of the community, believing that in serving these people, it is possible to make a difference and facilitate recovery. The Clinics provide outpatient services to adults, older adults, families, children, and adolescents. In addition, the Agency operates many special programs such as medication clinics, intensive case management, child abuse treatment and prevention programs, a mobile geriatric team, homeless outreach services and dual diagnosis treatment programs. The staff at Pacific Clinics is multi-disciplinary and is represented by psychology, psychiatry, social work, art therapy, marriage and family therapists, etc. The staff also represents a wide variety of theoretical orientations including psychodynamic, integrative, family systems, egopsychology, object relations, cognitive behavioral, and community psychology. The pre-doctoral clinical psychology intern training program has a community service emphasis, consistent with the values of community mental health and geared to the challenges typically confronted by psychologists in these types of settings. The intern receives supervised practical experience in intakes, psychological testing, diagnosis and treatment planning, case management, and psychotherapy with a wide variety of disorders and ages. Interns choose a primary emphasis area that will focus on work with either adults or children and families. The mission of the psychology internship program at Pacific Clinics is to provide experiential training from a broad, generalist perspective with the goal of developing interns basic competency to provide mental health services in community-based settings. The intern experience is designed to teach, model, provideexperience, and verify professional psychology competencies.

Program Description

The internship (2000 hours) at Heritage Clinic, a division of the Center for Aging Resources, strengthens interns' general psychological skills, knowledge & skill in serving older adults and community psychology approaches. The training goals are to: 1) train interns in high quality, general skills in psychological assessment and diagnosis, intervention, supervision, consultation, research and inquiry, consumer protection, professional development & cultural proficiency; 2) develop interns' understanding and skill in geropsychology; and 3) help clinicians understand community psychology, with particular focus on methods of reaching underserved & culturally diverse populations. We train interns to be practitioners who apply scholarly knowledge and methods of scientific inquiry to the clinical and community situations in which they are asked to intervene. Doctoral interns are involved in diverse clinical services including in-home psychotherapy with older adults, psychotherapy with severely mentally ill elders, limited psychological assessment, clinical mental health outreach with elders experiencing severe symptoms of mental illness, consultation with multidisciplinary professionals and psychoeducational outreach. Most services are delivered where elders live, including with homeless older adults. Interns may provide group therapy, possibly including a caregivers support group, dementia support group, at-risk older parents group or parenting grandparents group. Each week interns receive two hours of individual supervision, one hour of clinical staff consultation and one geropsychology training seminar. Full-time interns receive two additional hours of group supervision/week. The clinic is staffed by licensed & registered psychologists, master's level social workers, psychological assistants, as well as day-care and support staff. Trainees include postdoctoral fellows, doctoral interns and practicum students.

Program Description

Patton State Hospital is the largest forensic hospital in the United States, housing over 1500 patients (about 300 female). The patient population is ethnically and socioeconomically diverse, and there is a strong emphasis (experiential and didactic) on developing and furthering cultural competence during the internship. Patton has a monolingual Spanish-speaking unit and a unit for deaf and hard of hearing patients. Most legal commitment types are represented including not guilty by reason of insanity, incompetent to stand trial, prison to hospital transfers, parolees, sex offenders, and civilly committed patients who are too dangerous to be managed in a less secure setting. The primary theoretical orientation covered in seminars is cognitive behavioral. Interns also have opportunities to conduct therapy with other treatment approaches depending on intern interests and supervisor availability. Interns co-lead psychoeducational and process groups. Each intern carries at least 3 long term treatment cases (at least 1 female and 1 from a cultural background different from the intern). Emphasis is given to developing assessment, treatment, and consultation skills. Didactic seminars are run throughout the year with sections on multicultural issues, ethics, assessment, psychotherapy, forensic psychology, neuropsychology, forensic case law, and supervision. While one goal of internship is to develop strong general clinical skills, focused concentrations are available in forensic psychology, neuropsychology, and advanced clinical psychology. Continuing education workshops are provided at Patton. All interns participate in ongoing research groups (see brochure for current research projects). Benefits include vacation, dissertation and sick time, and health, dental, and vision insurance. Patton also has postdoctoral fellowships in Forensic Psychology (one year) and Neuropsychology (two years).

Program Description

Our goal is to train entry-level Generalist Psychologists that have been exposed to various clinical contexts in which professional Psychologists work. In addition to developing core competencies in the general areas of clinical psychology, each intern will gain experience in a particular area of concentration. Further, we emphasize direct experience with patients at various stages of development, with a wide breadth of presentations and demographic characteristics, in varied contexts and service delivery systems (i.e., outpatient mental health, psychiatric inpatient, medical setting), and employing a variety of modalities of approaches, which we believe prepares interns to enter comfortably into a range of professional roles and settings. We believe this approach to training helps interns articulate a strong professional identity, and fosters a commitment to "whole-person care," namely, a bio-psycho-social-spiritual perspective in clinical care. All interns develop core competencies in psychological assessment and diagnosis, psychological intervention, supervision, professional consultation, and program evaluation/development. The elective concentrations are designed to provide interns with exposure to more specialized areas of clinical psychology and/or populations with specific needs, including those with co-morbid medical and psychiatric diagnoses in a medical care setting. Each intern chooses a different minor concentration, based on their prior experience and professional aspirations. We offer elective concentration rotations in psycho-oncology, psycho-cardiology, eating disorders, child and adolescent assessment and intervention, and geropsychology/neuropsychology. In keeping with LLU's mission statement (www.llu.edu/medicine/mission.page), applicants who show interest and commitment for the integration of religion and spirituality within the practice of psychology are strongly encouraged to apply.

Program Description

The predoctoral internship at the Counseling Center provides training to interns using a practitioner-mentorship-developmental training model. The guiding principal is that learning is a developmental process that is dependent on support, challenge, feedback, and role modeling. Our training model is supported by the following principles that are infused into all aspects of the internship curriculum: a) Developmental perspective on all training activities; b) Focus on clinical service delivery as applied to university setting; c) A sequential learning environment that encourages movement from intern to competent and autonomous professional; d) Emphasis on supervision and mentoring/role-modeling; e) Creating a learning environment that is collaborative and collegial; f) Interdependence with the university community; g) Respect for diversity and uniqueness of the individual. For more information, please see our website: <http://counseling.ucr.edu/> or contact the Training Director.

Program Description

The CAARE Center serves children and caregivers with a history of physical abuse, sexual abuse, and/or neglect. Services include individual and group therapy, Parent-Child Interaction Therapy, Trauma-Focused Cognitive Behavioral Therapy, psychological evaluations, child welfare evaluations, and consultation to local public agencies. The full-time, one-year predoctoral internship provides training and experience in assessment, diagnosis, treatment planning, treatment delivery, case presentation, cultural competence, consultation, and ethics. The importance of empirically-based knowledge in these areas is emphasized. Upon completion of the training program, our graduates are expected to be able to competently assess and treat children and caregivers with a history of maltreatment. Applicants strongly interested in child maltreatment are encouraged to apply. For further information, please see our brochure located at www.ucdmc.ucdavis.edu/caare.

Program Description

Our program offers an intensive training experience covering a broad range of clinical populations for the internship participants within the context of community mental health. The Monterey County Behavioral Health Internship Program is composed of two clinics. Through a dual rotation arrangement, interns have the opportunity to engage in diverse training experiences and are exposed to a broad range of client populations.

Clinic 1: The F.A.S.T. (Family Assessment Support and Treatment) Assessment Team provides comprehensive family mental health assessments and treatment to children and families involved in dependency court (it has deemed it necessary to remove the child(ren) from the home due to abuse and/or neglect issues). Attachment theory, systems perspectives, and trauma informed approaches are utilized in helping understand and conceptualize the family's challenges, benjamin.miller@ucdenver.edu

Developmental Disabilities: Focuses on the development of disciplinary and interdisciplinary expertise and on the development of leadership skills in an interdisciplinary university setting which serves people with a wide range of cognitive, social/emotional, sensory, language, and motor disabilities. For latest information, contact Dr. Hal Lewis, by phone (303-724-7640) or email (Hal.Lewis@ucdenver.edu).

Deadline March 1

The Irving Harris Program in Child Development and Infant Mental Health: This is an infant mental health training program that provides training for postdoctoral graduates as well as mental health professionals seeking fmid-career§ training. It is an advanced fellowship in infant mental health, consultation, and treatment, which includes didactic and clinical experiences focused on the problems of infancy, toddlerhood and parenthood. For latest information, contact Nancy Plummer by phone (303.724.3728) or email (nancy.plummer@ucdenver.edu). Deadline January 1. designing and facilitating psychoeducational and psychotherapy groups; and developing proficiency in individual, family therapy and supervision. In the OCD and Anxiety Disorders track, the intern will focus on the assessment and treatment of anxiety disorders with comorbidities such as eating disorders, depression, trichotillomania, and body dysmorphic disorder. Treatment goals are accomplished through use of Cognitive Behavioral Therapy interventions such as exposure and response prevention and other exposure therapy approaches. Interns will become skilled at developing and implementing a graduated exposure hierarchy for each patient. (EOE/MFDV)

The Rogers Center for Research and Training has applied for and is in the process of obtaining APA accreditation. A site visit is scheduled to occur in January of 2013.

Program Description

See our Online Brochure at website listed for all program details. Feel free to contact Dr. Thorn by phone or email with questions. Interns can apply for one of two separate training tracks, consisting of two, 6-month rotations each: An Outpatient track (2 separate outpatient rotations) or a Forensic/Outpatient track (1 Forensic rotation, 1 Outpatient rotation). Clinical requirements are set for the year (e.g., 400 therapy hours, 10 test batteries, 15 intakes, 2 crisis interventions, and more -see brochure). Interns receive two individual hours of supervision each week. Interns meet with the Training Director each week for two hours of group supervision and two hours of intern seminar. Interns are able to attend live, Department-sponsored trainings throughout the year. There is a group testing consultation session every other week. Interns attend a weekly countertransference learning and sharing group. The program aims to help interns to understand human behavior in all its aspects, so that abnormal behavior is a subset of that total, and intervention is individualized to each client's specific dynamics and habits. Understanding one's own motives and emotions is viewed as necessary for depth-oriented therapists. Understanding case-conceptualization, not just intervention, is emphasized. Supervisor orientations are varied, but most are psychodynamic, cognitive-behavioral or eclectic. The Department, like all other California County mental health departments, uses a mental health recovery vision of care, focusing on client empowerment and involvement. This involves having interns participate in some non-traditional settings, such as client clubhouses, and to some extent in non-traditional services, such as helping clients with resources, helping clients get involved in self-help activities, and playing different roles with respect to a client over time. Short-term and group treatment are encouraged, but longer-term cases are also possible. All interns in outpatient rotations will work mostly with children and adolescents, but work with adult populations is typical as well.

Program Description

The University of California, San Diego School of Medicine, Department of Psychiatry in affiliation with the Psychology Service, VA San Diego Healthcare System (VASDHS), UCSD Outpatient Psychiatric Services, Outpatient Psychiatry of Rady Children's Hospital, Rady Children's Hospital Child and Adolescent Psychiatry Service, UCSD Medical Center, and UCSD Eating Disorders Center offers a 12-month, full-time, APA-approved predoctoral internship in clinical psychology. The program trains doctoral candidates to function as autonomous professionals in a variety of health care settings, with particular emphasis on the role of the psychologist in a teaching hospital, adult or child outpatient setting, and/or an inpatient child and adolescent psychiatric setting. The program emphasizes the Boulder, Scientist-practitioner model of training in psychology. We prefer applicants who are oriented more toward research and clinical interests (i.e., academic careers) than those interested in the full-time practice of professional psychology. For each intern, the program is comprised of year-long placements in two major rotations. The rotational structure of the program allows interns to maximize their exposure to the experiences available at each site. The possible combination of training opportunities for an intern is fairly unique to this nationally recognized program. Major rotations include adult/child inpatient/outpatient services, outpatient eating disorders, behavioral medicine, alcohol/drug treatment, dual diagnosis, geropsychology, mood disorders, sleep disorders, marital/family, PTSD, TBI, neuropsychology and schizophrenia. The program begins July 1st. Interns have options to join Health Insurance Programs. Most internship graduates go on to post-doctoral fellowships, many in research activities and many in the UCSD/VA San Diego system.

Program Description

Internship provides training in mental health assessment and treatment of active duty military members, their families, retired military members, and their families. Both outpatient and inpatient work are included. Major skills covered are interview and testing assessment, individual and group psychotherapy, and consultation with other medical services and active duty military commands. Primary individual and group supervision is provided by the faculty's civilian and military licensed psychologists. Adjunct faculty members include psychiatrists, in keeping with the internship's emphasis on multidisciplinary mental health programming. All internship graduates have an obligation to remain on active duty as Navy psychologists for three years after internship completion. Extensive training and supervision is provided in effective consultation with military leaders and personnel regarding the impact of mental health issues on military work performance.

Program Description

The APA Accredited Internship Program at Sharp Healthcare is designed as a generalist site. We believe the internship year is one of the last opportunities to absorb as much training as possible before you are on your own. It is based on this philosophy that we offer broad & diverse training possibilities. If you match, interns will be given the chance to rank order their preference to participate in 3 of our 6 rotations during the training year. Our rotations traverse the patient lifespan from child/adolescent to adult through seniors. We offer both inpatient and outpatient experience across these populations. Last year, all of the interns got their first choice and 5/6 got their second choice rotations. This depends on the interest levels of those who are matched, but it is likely that you will be able to participate in your 1st or 2nd choice. However, there are no guarantees and because we are a generalist site applicants must be okay with a 4 month rotation of their least preferred (this is extremely rare). Our main method of treatment at Sharp is group therapy. Interns will learn to co-facilitate initially as our model is the mentor model. You will learn by conducting group with your supervisor. Some rotations will then transition you are the primary therapist and you will be in charge! Many rotations offer family or co-joint therapy sessions, multi-family group & some individual therapy. One frequently asked question is, "What are you looking for in your selection process?" The answer is broad based and not easy to describe. We look at each applicant's experience uniquely and take into account all of their training and experience. Group therapy experience is obviously valued as is diversity & a strong motivation to continue to learn. People skills are a must as interns work with teams & many levels of professionals and staff. Please refer to our website for additional details: <http://www.sharp.com/mental-health/predoctoral-psychology-internship/>

This should be uploaded via the AAPIC Online Supplemental Materials field. At least two of your letters of reference should be from clinical supervisors.	

Program Description

The USDCC internship follows a practitioner-scholar model. We emphasize the role of the psychologist as an educated, thoughtful and self aware helper; we view science as a process in addition to a source of knowledge. Critical thinking, thorough assessment, and appreciation for diversity are hallmarks of our services. We embrace diversity broadly, including ability status, acculturation, age, culture, ethnicity, gender, race, religion, sexual orientation, and SES. The program provides initial self-assessment and close supervision. Independent thinking and self-appraisal are fostered. We offer generalist training in a university setting. Short-term services, assessment, and outreach are emphasized. Diversity skills are promoted through seminars, experiential exercises, and supervision. In addition to generalist training, we encourage interns to develop interests through rotations. The internship focuses on the following: Goal I. To train interns in the development of the professional skills, behaviors, and identity necessary to: Objective A: cultivate appropriate ethics. Objective B: manifest appropriate understanding of and sensitivity to diversity, and to integrate this into services. Objective C: cultivate an attitude of scientific mindedness. Objective D: establish and maintain effective professional relationships. Objective E: demonstrate self awareness. Objective F: engage in supervision and consultation experiences effectively. Objective G: maintain accountability. Goal II. To train emerging professionals with applied psychological skills and knowledge in preparation for their entry into practice, as evidenced by their ability to: Objective H: develop effective assessment, diagnostic and conceptual abilities. Objective I: develop individual intervention skills. Objective J: develop group therapy skills. Objective K: implement prevention efforts. Objective L: gain experience in supervision. Competencies attained are detailed on our website.

Program Description

The University of California San Francisco (UCSF) Clinical Psychology Training Program in the Department of Psychiatry offers a two-year fellowship opportunity. The Predoctoral Fellowship consists of a clinical internship followed by a one-year Postdoctoral clinical/research Fellowship. Our graduates are expected to pursue careers emphasizing research and training in academic/research settings, including those affiliated with health and mental health service systems. Over the last ten years, 87% of our graduates have obtained research or academic positions upon leaving our program. Increasing the number of women and minorities in academic and research positions is one of our goals. During the last 10 years, 79% of our Fellows have been women, and 40% have been minorities.

Program Description

We offer a wealth of training options under the supervision of experienced, licensed psychology staff. We stress general training in major practice areas in an integrative theoretical emphasis. Our internship is affiliated with University of California, San Francisco. Rotation options at SFVA include: Neuropsychological Assessment (required); Substance Abuse Treatment (required) through the Substance Use/PTSD Team, Opiate Replacement Treatment Team and/or Substance Abuse Day Hospital; Access Center; Health Psychology; PTSD Treatment Team; Family Therapy Program; General Psych Outpatient Services, Women's Clinic, Severe Mental Illness; Psych Rehab; Inpatient Psychiatry; Primary Care; Home-based Primary Care and Palliative Care; Group Therapy; Long Term Existential Psychotherapy; Time Limited Dynamic Psychotherapy; Suicide Prevention; Evidence-based psychotherapies. Seminars and didactic training experiences are built in and there is a 16 week clinical seminar held at UCSF. There are opportunities to develop specialty interests in trauma, substance abuse, behavioral medicine, and neuropsychological assessment. Interns may apply to any of our 18 in-house postdoctoral fellowships in neuropsych, trauma, substance abuse, primary care psychology and other emphasis areas. Our hospital is the highest research funded VA Medical Center in the nation. Although research is not built into the internship, interns may seek out research opportunities and allowed dedicated time. Up to 300 hours may be permitted at off-site UCSF activities. Applicants with a minimum of 1000 total hours of practicum experience will be considered.

Program Description

RAMS is a nonprofit mental health agency serving the diverse community of San Francisco, with an emphasis on Asian Americans and Pacific Islanders. RAMS clients - children, adults, seniors, and families - represent San Francisco's rich variety of races, cultures, languages, and sexual orientations. Nearly 50% of the outpatient clients are Asian (primarily Chinese, Vietnamese, Korean, Japanese, Filipino, and Cambodian); 15% are Russian-speaking. Most clients are poor, including many recent immigrants who face additional difficulties due to cultural conflicts and limited English. RAMS services address the full range of diagnoses and a wide array of problems in living, with special attention paid to the needs of more disturbed patients. RAMS programs include outpatient community mental health, low-fee, and school-based clinics; consultation to child programs; adult residential treatment; pre-employment counseling & vocational services. Our multi-lingual, multi-cultural, and multi-disciplinary staff includes consumer advocates, art therapists, vocational counselors, clinical social workers, marriage and family therapists, psychiatric nurses, psychiatrists, and psychologists. Besides predoctoral internship, RAMS offers psychology practicum, MFT and social work internship, postdoctoral and psychiatric residency training. RAMS Predoctoral Internship aims to provide interns with the generalist clinical practice skills expected of an entry-level psychologist: proficiency for the clinical assessment and conduct of psychotherapy (individual, family, group & couples) across the life span, with a variety of patient populations, and in a broad range of clinical settings. The hallmark of training is development of clinical sensitivity to diversity (particularly, in regard to Asian and Russian-speaking minorities) and skills for intervention with the more disturbed patient. For a detailed program description, please see our website at www.ramsinc.org

Additional Information About Training Opportunities

To develop a better understanding of the community mental health system of services, RAMS predoctoral interns are assigned to two semester-long clinical rotations. Each intern, in addition to his/her work with adult and child clients at the RAMS Outpatient Clinic, spends one day a week at a rotation site delivering clinical services and receiving on-site training and supervision, which is provided both individually and in the form of a treatment team consultation. The two rotations are selected from four options that represent different levels of mental health treatment and prevention: Adult Residential Facility; High School ED Partnership

Program Description

The mission of Child and Adolescent Services (CAS) is to provide culturally competent and high quality services, including assessment, treatment, and consultation for ethnically diverse and economically disadvantaged children, adolescents, and families. Most CAS clients have experienced psychological trauma related to child maltreatment, domestic violence, or exposure to community violence. Clinic services are provided at SFGH offices and in neighboring community sites. The CAS Multicultural Clinical Training Program upholds the Scholar-Practitioner model of training, and aims to integrate the most up-to-date research and best-practices with clinical services delivery that is grounded in serving the needs of the local community. CAS strives to prepare trainees to thrive as psychologists who can meet the needs of their community, and embody the highest standards of the profession. Integral to the training philosophy is the understanding that individuals are shaped and affected by their social context, as well as by social forces including prejudice and oppression. CAS is committed to working closely with other professionals involved in the lives of the families served in order to facilitate integrated care. Therefore, the training program emphasizes interdisciplinary collaboration & consultation including working with psychiatrists, pediatricians, social workers, and school personnel. Rotations in consultation with primary and specialty medical providers will also be provided to all doctoral interns. Child and Adolescent Services, The Infant-Parent Program, and the Child Trauma Research Program are in the process of integrating their didactics and training opportunities, therefore, CAS doctoral interns participate in a rotation at one of the other programs, but will receive the majority of their supervision from CAS. UCSF is an Equal Opportunity/Affirmative Action Employer. UCSF undertakes affirmative action to assure equal employment opportunity.

Program Description

In existence since 1979 and based at San Francisco General Hospital, UCSF's Infant-Parent Program is devoted to providing culturally competent high quality care to an ethnically diverse and economically disadvantaged population of infants, toddlers, and their families when difficulties in the child-parent relationship threaten to create serious problems within the child. Services are provided in the home and at SFGH and are embedded in a social justice perspective. The predoctoral internship is part of a broader Practice-based Training Program in Multicultural Infant/Family Mental Health, which includes intensive supervision - approximately one hour of individual supervision for each case with the exception of one case carried in a group of two or three trainees - and approximately 5 hours per week of seminars. The Infant-Parent Program, Child Trauma Research Program and Child and Adolescent Services are in the process of integrating their didactics and training opportunities. Doctoral interns in the 2014-1025 training year will be recruited by the individual programs and will receive the majority of their supervision in that program. They will however, participate in a rotation at one of the other programs so that all trainees have the opportunity to be trained in providing clinical service to children birth to eighteen. In addition, core didactics including Case Conference, Multicultural Seminar, Developmental Seminar and focused training in trauma will be offered to trained in all three programs. Rotations in consultation with primary and specialty medical providers will also be provided to all doctoral interns. Supervision is provided by experienced clinicians with a variety of orientations which include object relations, psychoanalytic and family systems. For full time interns with appropriate experience, additional participation in training in mental health consultation to early childhood settings may be available. IPP works closely with other professionals involved in the lives of the families served in order to facilitate integrated care. This includes an emphasis on interdisciplinary collaboration & consultation including work with psychiatrists, pediatricians, social workers and case managers. IPP also provides multidisciplinary training for post-doctoral fellows, psychiatric residents, social workers and marriage and family therapists. Therefore psychology interns are participating in case reviews with trainees from various disciplines and specialties. Many of the Program's over 200 graduates have continued to devote themselves to early intervention work with infants, toddlers and their caregivers in roles which include staff and Directors of infant mental health programs and staff and Directors of non-rofits.

Other Application Requirements**Program Description**

Access Institute has a two-year, half time internship in psychoanalytic psychology. The commitment is 24 hours per week, 12 of which are clinical hours and 12 of which are training hours. Four 1.5 hour seminars in psychoanalytic theory and technique are taught weekly, and all interns receive a minimum of two hours of individual supervision weekly. In addition to working in a general outpatient clinic, interns participate in one of four tracks: School based interns work in a local elementary school and Elder psychology interns work at a local Adult Day Health Center in addition to their clinic work. Interns in the Assessment rotation perform up to 4 full psychological batteries in the first year of training and interns in the Intake track perform initial telephone screening for prospective patients. The school-based and elder tracks are two year commitments and the intake and assessment tracks require commitments only in the first year of training.

Program Description

The full-time, 12 month Doctoral Internship in Clinical Psychology at Counseling and Psychological Services (CAPS) supports and enhances interns' knowledge and skills while also providing didactic and experiential opportunities that facilitate development of professional identities as psychologists. The focus of the clinical training is brief therapy based on an integrationist approach, incorporating various theoretical models and orientations, while keeping in mind individual, cultural, and societal considerations. The overarching goals for the training year are to develop and demonstrate skills and competencies for entry-level practice as a generalist psychologist and to facilitate interns' development of ethical integrity and professional identity as psychologists. In order to achieve these goals, the internship provides training in multiple areas including clinical assessment, brief individual psychotherapy, crisis intervention and management, consultation and collaboration with campus and off-campus communities, outreach program delivery, and program evaluation. Interns have the opportunity to work with a multiculturally diverse student population with a wide range of clinical concerns and to further develop their understanding of and sensitivity to individual and cultural diversity, and integrate such understanding into all forms of service delivery. In addition to individual and group supervision, interns participate in multiple training seminars including Didactic In-service; Intercultural; and Professional Development, Supervision and Program Evaluation. All licensed staff members actively participate in the training program and are committed to assisting interns in developing their own perspectives toward brief therapy and moving closer to the integration of evidence-based frameworks and methods.

Program Description

The Child Trauma Research Program (CTRP) has the mission of developing, testing and disseminating effective treatments for children aged birth to five who have experienced or witnessed violence in their homes or communities or who have suffered the death or loss of a primary caregiver. CTRP developed and provides training in Child-Parent Psychotherapy (CPP) an evidence-based treatment for young children who experienced trauma and their caregivers that integrates attachment, psychodynamic, trauma, cognitive behavioral and social learning theories. The Child Trauma Program is at the UCSF Department of Psychiatry and is affiliated with the Infant-Parent Program (IPP) and Child and Adolescent Services (CAS) which are a part of the Division of Infant, Child and Adolescent Psychiatry at San Francisco General Hospital. SFGH is a teaching hospital of the University of California San Francisco School of Medicine located in the largely Latino Mission District and dedicated to serving low-income and diverse ethnic and cultural minority populations. Doctoral interns in the 2014-15 training year will be recruited by the individual programs (CTRP, IPP, CAS) and will receive the majority of their supervision in that program. They will however, participate in a rotation at one of the other programs so that all trainees have an opportunity to be trained in providing clinical service to children birth to eighteen. In addition, core didactics including Case Conference, Multicultural Seminar, and Developmental Psychopathology Seminar and focused training in trauma will be offered to trainees in all three programs. Rotations in consultation with primary and specialty medical providers will also be provided to all doctoral interns.

Program Description

Asian Americans for Community Involvement (AACI) is Santa Clara County's largest community-based organization focused on the Asian community. Our mission is to improve the health, mental health and well-being of individuals, families and the Asian community by 1) providing an array of high quality health and human services, 2) sharing expertise about the Asian community's needs and best services delivery practices, and 3) providing Asian leadership in advocating on key health and human services issues. AACI's Behavioral Health Internship and Training Program (BHITP) prepares interns to provide culturally and linguistically diverse children, adolescent, adult and older adult outpatient populations with services in the areas of individual, group and family psychotherapy, assessment, crisis intervention and stabilization, case management and community outreach in a culturally and developmentally adaptive manner. Our BH staff is versed in over 30 different languages (agency wide >40) to address the diverse cultural and linguistic needs of the Santa Clara County population. Services under the Behavioral Health Department include mental health, substance abuse and problem gambling, torture and trauma, refugee and immigrants, domestic violence, HIV education/prevention, and advocacy services. Direct clinical services are provided in community, school and home-based settings to minimize access barriers, decrease clients' symptoms, enhance clients' functioning at home, school and the community, link clients with appropriate social services and community resources, and assist family members or relatives in providing support. Many of our services are publicly funded and compliant with Medicare and Medicaid/MediCal guidelines. AACI's BHITP aims to train the next generation of culturally competent community leaders and advocates in clinical psychology who will pursue just and equal healthcare service delivery to our diverse multicultural and multilingual populations.

Program Description

Counseling Services provides comprehensive mental health services for students at San Jose State University. The student population is highly diverse. There is no one clear ethnic majority group (more than 50%) on campus. Ages range from late teens to many students in their fifties. In addition, there is diversity around ability/disability, religion, culture, sexual orientation, value systems and lifestyles. Interns participate in the following: weekly Didactic Training Seminar with rotating topics (e.g., eating disorders, substance abuse, supervision skills, professional development, cultural factors, social skills development), Diversity Process Group, Group Therapy Seminar, Social Justice Seminar, Testing & Measurements Seminar, and Peer Support Meetings. Interns provide individual, group, and couple's psychotherapy, crisis response, and outreach/social justice work. Interns also attend clinical consultation meetings, staff meetings, and various university events. Interns individual supervision and group supervision. Interns attend 2 conferences: 1.) Multicultural Training Day (hosted by Counseling Services) and 2) Northern CA Training Directors Conference. Outreach and social justice work is highly encouraged. Numerous interns become involved with campus organizations or student groups (e.g., Mosaic Cross Cultural Center, International House, Greek Life, Residence Halls, LGBT Resource Center, Women's Resource Center, Cesar Chavez Community Action Center) by providing themed groups (e.g., LGBT Discussion Group) or outreach presentations (e.g., time management, healthy relationships, cross-cultural dialogues, stress management, perfectionism). Interns also may become involved in ongoing university initiatives, such as: Eating Disorder Awareness Week, Transgender Awareness Week, a suicide awareness initiative (Thousand Stars), the LGBT Peer Mentor Program (Peers In Pride), Men Creating Change, The Tunnel of Oppression, or African American History month.

Program Description

WE REGRET THAT WE HAVE SUSPENDED OUR INTERNSHIP PROGRAM FOR THE 2014-15 ACADEMIC YEAR. Our internship program, modeled on APA standards, is designed to provide high quality training and mentoring for interns wishing to become psychotherapists. Interns gain extensive training in individual treatment, and strong training in group therapy, psychoeducation, community-based interventions, consultation, and crisis intervention. Limited clinical assessment training is integrated with training for individual treatment. We dedicate significant energy to the internship program and our supervisors are committed to developing supportive mentorship relationships with trainees. We follow a developmental training model, in which we strive to assure that interns not only reach solid professional competence but also substantial development of their own identity as psychologists; our center and training program are diverse in orientation, providing exposure to and respect for a variety of clinical approaches. Thus, although we have a structure to address the needs of most interns at the doctoral level, we tailor the experience for each intern's professional goals. The program begins with a thorough training and orientation in cultural competence, brief therapy, risk issues, group therapy, substance abuse intervention, privilege and power issues, agency policies and procedures, law and ethics, and community psychology theory and techniques. The orientation period ends with in-depth skills assessment and goal-setting for the internship year. Formal training throughout the year includes: 2 hrs/wk individual supervision; 2 hrs/wk group supervision; over 60 hours of educational sessions on applied clinical or community-based intervention topics scheduled periodically throughout the year; mentoring of community psychology projects, and additional consultation as needed. Training in group therapy is provided through observation of training staff followed by co-facilitation with a senior staff member. Opportunities for outreach, professional presentations, and organizational liaison are also part of an intern's training plan. Mentoring through the transition to post-internship employment rounds out the internship experience.

Program Description

FCI Terminal Island's Internship Program was granted APA Accreditation during the CoA's March 22-25, 2012 meeting. The program at FCI Terminal Island is based on the Local Clinical Scientist training model which enables interns to develop strong clinical skills, as well as the ability to research and integrate context specific factors into their clinical work. While assessment & evaluation experience is offered, the training program offers more emphasis on developing skill in treatment and intervention. Psychology Services is centralized within the institution, which contributes to a professional atmosphere and close working relationships with colleagues. The department includes five licensed psychologists and five drug treatment specialists. A full-time secretary provides staff with administrative support. Several large classrooms are available for meetings, seminars, and group treatment. Three offices, each with a computer, printer and phone, are designated specifically for intern use. The services provided by Psychology Services at FCI Terminal Island include psychological screenings of newly admitted inmates, brief treatment of adjustment symptoms, crisis intervention, suicide risk assessment, long term and group therapy. We also conduct substance abuse treatment, psychological assessment, and consultation with staff regarding inmate management concerns. Opportunities exist to provide brief and long-term treatment in individual and group formats. Weekly didactic training is offered, some in conjunction with the internship program at MDC Los Angeles (an APA accredited Bureau of Prisons' facility). The primary goals of the Internship Training Program are to (a) train competent early career psychologists and (b) train early career correctional psychologists. Those who successfully complete a Bureau of Prisons internship are uniquely qualified as potential full-time psychologists with the agency.

Program Description

We prepare psychologists for professional practice in public mental health and to provide emergency and continuing care to a diverse client population with a wide range of challenging mental health needs. Services include mental health evaluation, crisis intervention, community outreach, consultation and psychotherapy for individuals, families and groups. Applicants apply to specific tracks. Each track includes clinical experience in Psychiatric Emergency Services, general outpatient practice and community-based service delivery to a broad-range population, and 1.5 days working within a specific interdisciplinary team. **Latino Family Health:** (Bilingual fluency in Spanish and English required)Interns provide outpatient services to family, youth, adult and older adult clients in outpatient mental health, primary care, and community settings. Training emphasizes strengths-based, family-oriented interventions that address effects of trauma, immigration, acculturation and socioeconomic disparities. Practice opportunities include school-based interventions, juvenile or adult justice programs, in-home services to seniors, and parent education outreach via broadcast media. **Forensic Mental Health:** Interns provide services to adult mental health clients who are in the criminal justice system and Mental Health Court. Interns work with law enforcement, medical and mental health providers in the clinic, at the jail and in the community, gaining supervised experience in assessment, trauma-informed treatment, assertive case management. **PGSP SMI Track:** This track is affiliated with the Diversity and Community Mental Health track, Pacific Graduate School of Professional Psychology at Palo Alto University and open only to students currently enrolled in the Ph.D/DCMH program at PAU. Interns receive supervised training in providing integrated psychology services to adults and older adults with serious/persistent mental illness.

Program Description

Under a practitioner-scholar model, we view training as a developmental learning process. We are committed to train generalists to provide culturally responsive services, adhering to APA guidelines for working with LGBTQ, women & girls, culturally, linguistically, & ethnically diverse population. The primary focus of the internship program is to train predoctoral interns to be competent to work with a diverse community college population and to perform a full range of professional activities under supervision. Interns will be trained to provide ethical and culturally responsive services including: short-term individual therapy; crisis intervention; and outreach and teaching opportunities. There are also opportunities to provide some long-term therapy. In addition, there are opportunities to provide bilingual therapy and receive supervision in Spanish and Vietnamese. Interns also will be trained to use assessment instruments to evaluate for learning disabilities. In addition, interns have opportunities to facilitate psychological support groups and psycho-educational workshops, based on their personal interests and the needs of the students. Topics in the past have included self-esteem, stress management, assertiveness training, conflict resolution, parenting, and anger management. Furthermore, interns have opportunities to participate in outreach activities, program development, and possibly guest lecturing in undergraduate psychology courses. Interns at SAC are considered full time adjunct faculty. Employment at SAC is contingent upon the applicant satisfying certain other eligibility requirements. An applicant for employment, prior to beginning employment, must have a recent/current TB test and live scan criminal background check. Once matched with us, you will be asked to satisfy these and any remaining eligibility requirements to complete the hiring process.

Program Description

The internship program is designed to provide a comprehensive training experience developing psychological skills in working with a diverse university student population. All interns obtain supervised individual, crisis and group counseling experience. Webcams are available for video recording. Opportunities for presenting workshops, developing outreach programs, consulting with campus groups, supervising doctoral-level practicum students and conducting psychological assessments are included in the program. An ongoing training seminar for interns incorporates case conferences, assessment, and other topics within the professional field. Other training seminars address supervision, consultation, group, brief therapy and multicultural issues. In addition, interns participate with other staff members in organizational meetings and professional development activities.

Program Description

Counseling and Psychological Services (CAPS) is part of a private, residential, Jesuit University of approximately 8,000 students, with both undergraduate and graduate programs. CAPS mission is to support students and student learning by providing counseling services to students and consultation and outreach programs to the larger campus community. CAPS serves both graduate and undergraduate students. Interns will have opportunities to provide crisis intervention as well as both short and longer term therapy, working with individuals and groups. Presenting problems include a variety of issues prevalent in a primarily young adult population (i.e. identity issues, depression, anxiety, substance abuse, eating disorders, relationship problems, trauma etc.). Interns are encouraged to engage with the university community by participating in outreach and psycho-educational programming, serving on university committees, and

Program Description

<p>Our APA-accredited Doctoral Internship Program in Professional Psychology in Counseling and Psychological Services at UC Santa Cruz offers supervised experiences for individuals who are interested in developing clinical, outreach, and consultation skills with a diverse university population. Our training program is strongly committed to the development of psychologists sensitive to and able to work with individuals from diverse backgrounds and to a community psychology model of intervention. The goal of our training is to support the development of interns as entry-level psychologists. Our philosophy of training emphasizes that interns are professionals-in-training, and they provide the same variety of clinical and primary prevention services as do permanent staff. The program utilizes an apprenticeship mentoring model of training where the intern learns by working with experienced staff members conducting the full range of activities carried out by a University psychologist. The multidisciplinary and diverse CAPS staff have varied theoretical orientations, and are committed to providing a high quality educational experience within a student services agency. Although there is no prevailing theoretical orientation, we hope the intern can incorporate learning from various staff to expand, refine, and deepen both their theoretical knowledge and repertoire of skills. The major training and educational goals of our internship include: 1) developing a broad range of clinical skills necessary to practice psychology; 2) developing competence in a community psychology model of service delivery emphasizing outreach and consultation; 3) developing multicultural competence in psychological service delivery to a diverse university population; and 4) developing a professional identity as a psychologist.

Program Description

Saint John's Child and Family Development Center (CFDC) provides training in clinical child and adolescent psychology in a multicultural community mental health setting. The internship encourages trainees to develop as "local clinical scientists" (Stricker and Trierweiler, 1995). Over the course of the training year, interns cultivate observational skills that allow them to determine whether evidence gathered through direct clinical interaction supports or contradicts the applicability of normative research findings to particular clinical cases. Interventions are then developed and modified accordingly. The program trains interns in: 1) Psychotherapeutic Intervention, 2) Psychodiagnostic Assessment, 3) Mental Health Consultation, 4) Integration of Science and Practice. Interns are trained in a number of Evidence-Based Treatment approaches. A strong emphasis is placed on cultural context as well as ethical/legal considerations. Interns are provided with opportunities to work in various departments and clinics within the Center. These include Outpatient program, Birth-to-Five, School-based Ind/Family Therapy, Deaf/Hard-of-Hearing, Adult Developmental Disabilities, Youth Development Project and Therapeutic Preschool program. Interns also might consult to families coping with parental cancer. Interns attend 4 weekly seminars and clinical team meetings addressing Psychotherapy, Assessment, Consultation/Liaison, and Professional Development. Interns receive 5 - 6 hours of supervision each week from a variety of licensed psychologists and other mental health professionals. In order to complete the internship requirements interns need to receive 2,000 hours of supervised clinical experience by the end of the internship year. Supervision is based on the Integrated Developmental Model (Stoltenberg, McNeill & Delworth, 1998) and all supervisors are trained in this model. Please refer to our website for further program description: www.newstjohns.org/cfdc-psychology-program.aspx

Program Description

We serve an incredibly diverse range of clients with respect to ethnicity, culture, SES, age, diagnosis and cognitive ability. We serve children/adolescents/families with special needs related to child maltreatment/trauma, emotional disturbance, autism spectrum disorders, and learning disabilities. Clients are served in an outpatient community mental health setting, in 4 different on-site non-public school-based milieu settings, in 2 day treatment programs, and in residential treatment. Clinical supervision focuses on case conceptualization, treatment planning, treatment interventions, and the treatment process, including the nature of the therapeutic relationship and the ability of the therapist to use the self as a therapeutic tool. Supervisors also focus on uncovering the many layers of meaning in a therapeutic encounter, on identifying transference/countertransference, and on learning how to turn countertransference experiences into techniques. EBPs such as behavioral and cognitive-behavioral techniques are utilized regularly, as are art and play therapy techniques. A multi-disciplinary treatment team approach is a crucial component of our orientation and our training. The Help Group's staff mirror the rich cultural diversity of Los Angeles, and we pride ourselves on our ability to meet the needs of families from diverse ethnic, religious, and linguistic backgrounds. Interns who are bilingual in Spanish or Armenian will be supervised by a Psychologist who speaks those languages. Interns attend a monthly Cultural Complexity Seminar with training staff, and intertwine the topic of culture into all their roles. In addition to direct service (individual, family, group therapy in schools, homes, and clinic) and psychodiagnostic assessment (cognitive, personality, perceptual and academic functioning), interns are exposed to a number of different professional roles: consultant, supervisor of a prac student, program developer/evaluator, and administrator.

Program Description

Lucile Packard Children's Hospital at Stanford (LPCH) is a specialized 312-bed hospital providing inpatient and outpatient care to babies, children, adolescents, and expectant mothers. At LPCH, interns spend three months on the Pediatric Psychiatry Consultation-Liaison Service (C/L) and three months on the Eating Disorders Team, which provides services to the Comprehensive Pediatric Care Program. During each 3-month rotation, interns typically carry a caseload of up to 5 patients, providing individual and family therapy and consulting with the medical teams and school staff. The interns are part of a multidisciplinary team that includes psychiatry, psychology, medical services, nursing, social work, milieu counselors, child life specialists, rehabilitation therapists, and hospital school staff. Interns receive individual supervision by the attending psychologist on the service. In addition, they attend daily rounds and weekly seminars, where they present cases for discussion and review relevant literature. The Children's Health Council (CHC) is a private, nonprofit agency that offers outpatient mental health, educational, speech language, and occupational services to children with emotional, learning, and developmental problems. Multidisciplinary teams coordinate and provide most of the diagnostic and assessment services to children and adolescents referred to CHC. Interns typically complete at least two team evaluations per month and participate in team dispositions, where members of the team present their findings and integrate the varying data and perspectives offered by each discipline. CHC also strives to provide interns with a range of treatment cases requiring varying conceptual orientations and therapeutic interventions. Interns are responsible for a caseload of six treatment cases and co-leading up to two group therapies.

Program Description

The Predoctoral Psychology Internship Program at Counseling and Psychological Services (CAPS) at Stanford University offers its Predoctoral Interns opportunities for professional development as a psychologist in a variety of areas specific to college mental health. Our site is especially designed to train entry level professionals who are interested in pursuing college mental health as their career focus. The goal over the course of the year is for Interns to achieve competencies to practice and operate as independent professional and ethical psychologists. In order to accomplish this goal, the training program provides experiential and didactic learning to interns with the support of supervision and mentorship. We also offer 3 clinical rotations in Eating Disorder, Substance Abuse and Gender Sexual Identity, designed to prepare interns in working with students who present with these issues. Interns achieve intermediate to advanced levels of competency with conducting intakes and clinical assessment, providing crisis intervention through on-call services, working with individuals and couples using brief psychotherapy models and providing services to the diverse Stanford community through structured workshops, outreach programming and consultation. Interns will provide psychotherapy using a brief therapy model, however, they will also have the option to carry two long-term cases for the year. Interns will be provided opportunities to develop their theoretical orientation and clinical competence through working with supervisors and being part of a multidisciplinary team in addressing the mental health needs of students. Additionally, the development of the interns professional identity is nurtured through group supervision, didactic seminars, clinical rotations and building relationships with the large, multidisciplinary staff that is committed to training and mentorship.

Program Description

The APA Accredited doctoral internship program is designed to train highly competent professionals in the field. We aim to foster independence and provide for the development of versatile generalists in the field of psychology. Within a multicultural context, we are committed to promoting excellence and competence with psychological skill levels, and strive to provide experiences that allow for interpersonal depth and enhanced clinical ability within a humanistic framework. The internship year is an opportunity to further hone interest areas, and concentration and emphasis on these areas is encouraged and supported through the training model. Our goal is to provide a strong foundation that lends itself to the development of professionals in the field, while still respecting the individuality of each doctoral intern. Doctoral interns are given the opportunity to assess, diagnose, and provide treatment for a wide range of presenting concerns—from normal developmental and situational issues to significant psychopathology and characterological concerns. Each of the licensed staff members provides a different set of skills, training, and experiences, so there is no uniform theoretical orientation with regard to the conceptualization of clinical work or supervision. Highest regard for professional ethics and standards of care are the common underpinnings of all staff members. Doctoral Interns conduct individual, couple, and possibly group psychotherapy during their tenure with us. Assessment is also a component of the training, although the number of batteries completed varies on an individual basis (a minimum of 1 battery per year is a required component of one major case presentation). Additionally, interns are expected to participate in various outreach programs sponsored by the Counseling Center. We are a very active unit within the larger Division of Student Life, and maintain strong collaborative relationships with our partners throughout the university.

Program Description

Tarzana Treatment Centers has provided behavioral healthcare and treatment services in Los Angeles County since 1972. Interns are involved in a variety of programs: Inpatient, Residential Adult; Outpatient Adult; Community Mental Health; Youth Outpatient; and Youth on-site school program. All interns participate in the Inpatient Program as well as at least two of the other programs. The patient population is demographically diverse and presents a wide-range of clinical concerns including: affective, anxiety, substance abuse, psychotic and characterological disorders; trauma; HIV/AIDS. Clinical activities include: individual, couple, family and group psychotherapy; psych triage; diagnostic clinical interviews; test batteries and reports; crisis intervention; intake evaluations; case conferences; consultation/liaison; case-management; progress notes/chart documentation; treatment planning; information and referral; and discharge planning. Supervision in Cognitive-Behavioral, Psychodynamic, Structural-Strategic, Humanistic Psychotherapy, Group Psychotherapy, Crisis Intervention, Mindfulness and Psychological Emergency Assessments are core areas of the training program. Interns receive two hours of individual supervision weekly by licensed clinical psychologists, and receive four more hours of group supervision on (1) individual psychotherapy, (2) group psychotherapy, (3) assessment, and (4) professional issues that address transitioning from the intern role to that of a psychologist. Also, interns attend a weekly 90 minute didactic training seminar on substance abuse and psychotherapeutic techniques that addresses a broad range of assessment, diagnostic, intervention, and ethical topics and issues. Additional training seminars and case conferences are also scheduled or available. Interns also attend 16 hours of training in HIV/AIDS. We currently have 3 intern slots in our Youth program and 2 intern slots in our adult program.

Program Description

DSH-Vacaville is a licensed inpatient psychiatric treatment program located inside a prison. There are 218 acute 258 intermediate treatment beds for male offenders. Male inmates from throughout California are referred for evaluation, acute stabilization, and brief treatment. The focus of training is on the comprehensive psychological assessment of patients, and many patients are referred to the facility specifically for diagnostic clarification. Interns receive intensive training in psychological assessment, including neuropsychological, personality/diagnostic, and suicide and violence risk assessment. Interns also receive clinical training and experience in individual and group psychotherapy. Interns are part of an integrated team of professionals for service delivery, participating in interdisciplinary treatment teams, co-facilitating group therapy, and working with consultative services. Interns receive the following weekly training seminars: Case Conference, Clinical Issues, Neuropsychology, Personality/Diagnostic Testing, and Research Assessment. All psychology staff members are involved in the training program. Interns also take part in on-going correctional assessment research focusing on suicide risk evaluation. Clinical services and research assessments are conducted in English and Spanish, part of a program commitment to culturally competent training and service provision. Interns selected to the program who would like to compete for the site's Postdoctoral Training program are free to do so just as any other applicant. The fellowship offers advanced training in assessment and consultation within a correctional setting. The internship provides an excellent training basis for candidates with career goals that involve correctional, forensic, and/or assessment-based clinical or consultative work.

Program Description

Our program is in Kaiser's Department of Psychiatry and Addiction Medicine, a large outpatient dept. Kaiser Permanente is a non-profit health maintenance organization, the largest group practice, pre-payment plan and the largest non-governmental health care delivery system in the U.S. Kaiser has more than six million members nationally, and approximately 500,000 members in San Diego County. Interns work as members of a multi-disciplinary clinical team — seeing children, adolescents, adults, couples and families in therapy; working as co-therapists in our extensive group therapy program; doing psychological and neuro-psychological testing; and participating in "minor rotations" in our Chemical Dependency program, our Emergency Room at the main medical Center, and in the community at the San Diego Family Justice Center (providing services to victims of domestic violence). Interns are afforded up to 20% of their time to pursue "elective" interests — allowing for flexibility in clinical and training pursuits, and opportunities to work with staff from various disciplines and with various areas of expertise. We have an extensive seminar program throughout the year, covering a broad range of topics (e.g., strategic/solution focused therapy; Rorschach interpretation; couples therapy; psycho-pharmacology; psychological assessment; professional and ethical issues). Interns also take part in professional development seminars, along with the professional staff of the Department. Each intern works with a Primary Supervisor throughout the year, as well as with other clinical supervisors — offering exposure to varying theoretical orientations and the opportunity to work with staff with various clinical specialties. We place a high priority on providing a nurturing and supportive environment for our interns. Our goal is to assist our interns in their transition from graduate students to solidly trained, professional psychologists.

Program Description

Our Mental Health Internship in Chemical Dependency currently supports 3 full-time positions in the **Adult & Adolescent Chemical Dependency Program**. Residing within a very large outpatient Mental Health and Chemical Dependency Department of over 150 professionals, the Internship provides a model of integrated health care within Kaiser Permanente's busy Walnut Creek Medical Center, providing treatment to more than 350,000 Kaiser Members. Walnut Creek Mental Health and Chemical Dependency Department provides the Region's highest level of care in several specialty areas of treatment, including chemical dependency, intensive outpatient psychiatry (post-hospitalization), and eating disorders. Interns are part of a truly multidisciplinary treatment team within a larger Mental Health Outpatient Clinic and integrated primary care setting. In addition, we have a **vibrant training cohort** of twelve, including the pre-doctoral interns, four post-doctoral residents, two psychology practicum students, and three social work interns.

Three main components comprise the training: supervised provision of psychological services; professional development through group and individual supervision; and education and training through weekly didactic seminars. Interns and all Regional Psychology Trainees convene in our corporate headquarters in nearby Oakland for seven special half or whole day seminars. Psychologist experts from within and outside Kaiser Permanente present material essential to trainees at this level.

The clinical caseload for interns is **primarily in group psychotherapy** with some individual case management and individual visits with incoming new patients. They engage in an increasingly independent role as group facilitators in groups ranging from psychotherapy process to psycho-education. Interns have the unique opportunity to conduct groups with their supervisors as co-therapists, and to participate in the assessment of Adult ADHD within the context of our larger mental health clinic. In addition, interns are invited to participate in ongoing program evaluation in the Chemical Dependency Department.

Our internship was awarded a grant from the American Psychological Association to assist in our preparation for APA accreditation, and we will submit our application (self-study) to APA in January of 2014. Our current interns (2013-14) and incoming interns (2014-15) will then be at a training site whose APA accreditation status is pending, and all Kaiser training sites have been able to earn full APA accreditation. We are committed to earning and maintaining APA familiarize themselves with the UCPS staff and LU Student Affairs community. While there are core components of the internship program, our aim is to provide as individualized a training experience as possible with the goal of effectively meeting the unique needs and interests of each intern. Our predoctoral internship program was recently approved as a full member of the —Association of Psychology Postdoctoral and Internship Council (APPIC). This internship program desires to further the growth and development of professional psychologists capable of working as generalists with a specific skill set applicable to work in a university setting. Within this, the training program most closely identifies with the practitioner-scholar model of psychological training (Ellis, 1992) as we emphasize the integration of research, theory, and shared intellectual inquiry to inform the services we provide to the university community. In conjunction with UCPS and our larger institution, the training program's primary aim is to offer the most comprehensive, supportive, and developmentally appropriate care to students. This stance is similarly reflected in our attitude toward interns during their final year of training. The purpose of our internship program is to provide comprehensive training that emphasizes the integration of professional and personal development of our interns. Our goal is to train highly competent generalists with the specialized skills and areas of expertise needed to function as practicing psychologists. At the same time, we want clinicians graduating from our program to be compassionate, engaged professionals who love their work and feel passion for the work they do. We hope to create an environment whereby interns are able to laugh with one another, be curious together, and can work through issues collaboratively and respectfully where differences are understood. We promote and encourage ethical conduct and multidisciplinary coordination so that interns are sought out by their colleagues and others on campus as wise and aware individuals who live in a global community, even within the framework of an academic university setting.

Program Description

The program is structured with required components to provide interns with therapeutic, assessment, and consultation experience along the full continuum of care in child clinical psychology, and with a selected track component to provide the same opportunities for experience in pediatric psychology. The child clinical psychology continuum of services offered through Children's Hospital Colorado includes initial and/or emergency evaluation, crisis stabilization, and intensive and routine outpatient therapy. Direct experience with youth and families in these varied contexts enable interns to recognize the appropriate level of care needed by a child at any given point in treatment, and to access those services in both medical and psychiatric settings. The tracks are designed to provide interns with experience functioning as a pediatric psychologist to children and adolescents with co-morbid medical and psychiatric diagnoses in a medical care setting. The internship includes two yearlong major rotations and three, four-month minor rotations. The internship is structured with longer-term service exposures in order to facilitate the interns' immersion into what is often a new field of experience, and to give the intern time to develop confidence and competence before changing training focus. Major rotations: Elective Tracks (intern will match on only one of these tracks, but may apply to more than one) - (12 months, 20hours/week dedicated clinical, plus 4h/week for research=24 hours total) Neuropsychology, Pediatric Health Subspecialty, Eating Disorders, Developmental Disabilities (NeuroDevelopmental Behavioral), Rehabilitation Psychology, Integrated Primary Care, and Outpatient rotation - (12 months, 12hours /week): Intake/Initial Evaluation Clinic Outpatient Psychotherapy: individual and family therapy Group Therapy in Anxiety, Mood Disorders and with Disruptive Behaviors Minor Rotation: Emergency Room Triage - (4 months, 4 hours/week, 2 interns at a time) Inpatient Assessment - (4 months, 4hours/week, 2 interns at a time) Inpatient Intervention - (4 months, 4hours/week, 2 interns at a time)? Didactic seminars - are held on Tuesday mornings. Currently seminars are run from 9:00 am to 2:00 pm. Some seminars exclusively include psychology interns, and child psychiatry residents (first and second year) to facilitate interdisciplinary training. Please see brochure located on the Children's Colorado Website for a full description of the program.

Program Description

The Clinical Psychology Internship Training Program resides in the Department of Family Medicine at the University of Colorado School of Medicine and offers one-year, full-time training for predoctoral psychology interns. For the 2014-2015 training year we will offer three specialty tracks: 1) Primary Care AF Williams; 2) CU Aging Center/Primary Care at Peak Vista; 3) Primary Care at Salud Family Health Centers, and 4) JFK Developmental Disabilities. Applicants may apply for only one track. Because this training has a specialty emphasis, applicants who show promise of a career focus in the specialty area will be given priority. Evidence of prior experience in and commitment to the specialty area will be weighted heavily in evaluating applicant credentials. The internship is organized around major rotations and minor rotations. Major rotations correspond to the specialty tracks to which an individual applies. Major rotations are 24-32 hours per week for 12 months. Minor rotations are available to complement the major rotations and require 12 hours per week for the year. Minor rotations allow interns to acquire additional training in one or two areas closely related to the major emphasis. In addition to the rotations, there are a number of additional required experiences, including 1 to 2 week-long training trips to the Lakota Reservation at Pine Ridge, South Dakota and a rural primary care immersion experience. Scheduled in blocks throughout the year are weekly seminars and didactic experiences: Professional Issues Seminar (covering Ethical and Professional issues), Psychology and the Law, Involuntary Commitment, Health Psychology and Primary Care, Clinical Case Conference, Outcomes Oriented Psychotherapy, Diversity Seminar, Professional Development, and Intern Lunch (year long). Additional coursework may be selected from the listing of Optional Seminars, including Family Therapy, Neuropsychology, Child Development, and Key Concepts in Pediatric Disabilities (required for JFK Dev. Disabilities).

---	--

Program Description

The Center provides comprehensive mental health services to people of all ages, who represent virtually all DSM-IV diagnostic categories. Services include outpatient and intensive treatment for children, adolescents, adults, and older adults. Interns select a primary with either adult or child/family emphasis, but the two minor rotations can be with any age group. The primary is two days per week for 12 months and each minor is 2 days per week for six months. Monday mornings are set-aside for interns to work on their research project, attend seminars, and for peer socialization and support. Four hours per week are set aside to work on testing. The seminar series includes a supervision of supervision group and an assessment group that each meets every other week. We strive to provide interns with the opportunity to supervise a practicum student but cannot guarantee it. We select two interns who prefer an adult focused primary placement and two who prefer a child/family primary placement. The Center offers a continuum of services to children and adults who have a concurrent developmental disability and a mental illness. Treatment teams are multidisciplinary and there is ample opportunity to provide consultative services to other community agencies and providers. Interns are required to complete 10 testing evaluations during the year. Interns participate in a group research or program evaluation project and - as a group - write a research paper in APA style and present their findings to the management of the Center. To successfully complete internship, interns must demonstrate competency in diagnosis and assessment, conceptualization and treatment, consultation, professional conduct and ethical standards, individual and cultural diversity, application of current scientific knowledge to practice, and supervision. The Center serves a diverse racial and ethnic population. Minority applicants are strongly encouraged to apply.

Program Description

Our program is housed within the university's student health center. We are not a university counseling center. Full range of mental health services to students under a limited scope of service as providers for the student health insurance plan. Multidisciplinary treatment team consists of psychologists, social workers, psychiatrists, substance abuse specialists and trainees in psychology, social work, and psychiatry. One of the central training experiences of the internship is the opportunity to provide therapy in an integrated health care setting including co-treatment with psychiatrists for students on medication and treatment that can include a multi-disciplinary focus. We see students primarily for short-term therapy and use our program in group psychotherapy for longer term work. We provide screening for ADD/ADHD difficulties and crisis care walk-in intervention services on a daily basis. The clientele we serve present with a broad spectrum of more serious problems and concerns in this population. To be competitive applicants must address "quality of fit" between the applicant and our site in their cover letter. Application criteria are more fully spelled out in our program brochure. Our program brochure can be located by searching the health center's website at: <http://healthcenter.colorado.edu/>

Other Application Requirements

Applicants must pass a thorough background investigation prior to beginning the internship. Applicants must submit 2 psych evaluations/reports, 3 letters of reference, grad transcripts and vitae.

Program Description

The CDOC internship is a 2000-hour, 12-month program. There are 3 site rotations. CSP is a maximum security facility and is located in Canon City. SCCF houses offenders with serious mental illness and is located in Pueblo. CCF has a special needs transition program to help move offenders with mental health problems from Administrative Segregation into General Population. The orientation of most staff follows the cognitive-behavioral model. Experiences received by interns include: assessments, treatment planning, segregation rounds, staff and psychiatric consultation, weekly seminars, report writing, crisis intervention, individual and group therapy, and supervision. Substance abuse convictions and/or criminal history may result in applicants not passing the background investigation. Applicants must complete the CDOC Basic Training Program prior to beginning the internship and pass initial drug screening and random drug screening throughout employment. All CDOC facilities are non-smoking.

Program Description

AspenPointe is a community mental health center serving three counties in Colorado: Park, El Paso, and Teller. We serve disadvantaged children, adolescents, and adults with mental health problems that span the spectrum of disorder from adjustment problems to severe and persistent mental illness. Our treatment philosophy is strengths-based and recovery-focused and the primary theoretical orientations of staff at AspenPointe are CBT, DBT, and integrative. We offer a full spectrum of services from traditional in-clinic to non-traditional, client-driven community and home based treatment. The primary rotation for the internship is in Adult and Rural Services; the interns spend 3 days a week there. The interns spend the other 2 days on minor rotations. The minor rotations include: outpatient therapy with children and families, therapy on an inpatient psychiatric unit, testing, biofeedback (heartmath), substance abuse treatment, and behavioral consulting with adults in a primary medical setting.

Program Description

The pre-doctoral psychology internship is a generalist training experience with the primary rotation being a year-long placement in an outpatient setting serving children, adolescents, adults, families and older adults. In addition to the primary rotation, interns complete four supplemental rotations (1) one a day a week, for 12 consecutive weeks, with the emergency services team co-conducting crisis evaluations (in-person and via phone) with licensed professionals, (2) a rotation working with various agency programs that provide services to seriously and persistently mentally ill (SPMI) clients, (3) an elective rotation focused on an area of interest chosen by the intern, and (4) a year-long rotation as part of the psychological testing team where interns complete 12 integrated, comprehensive testing batteries. Interns are an integral part of their primary rotations by attending weekly outpatient team meetings and receiving administrative supervision from the team's manager. A variety of training experiences are provided to the interns via a weekly assessment-focused seminar and a weekly didactic/group supervision seminar. As part of the internship experience, interns are also required to develop and provide a presentation on a professionally relevant topic to the staff at the agency. Lastly, interns are provided scheduled time each week for peer consultation and support as part of the internship experience. Applicants must not have a felony conviction. Please visit our website at the following link for a detailed program description and application instructions: www.communityreachcenter.org ;gt career link ;gt internship practicum opportunities page.

Program Description

The CMHI-Ft. Logan predoctoral clinical psychology internship follows a local clinical scientist model in a collegial training atmosphere. Interns are prepared to assess and treat seriously mentally ill persons with a variety of diagnoses on interdisciplinary teams. Training includes didactic instruction, self-study, individual and group supervision, role modeling, interaction with interdisciplinary treatment staff, and interaction with the patient population. The goal of the predoctoral internship program at CMHI-FL is to provide experiential opportunities, excellent supervision, and advanced training which will further interns' development in the areas of assessment, testing, treatment, consultation, supervision, cultural diversity/individual differences, the integration of science and practice in an applied setting and the demonstration of professional and ethical behavior. Interns choose three major rotations from four unique treatment teams plus the neuropsychology service. Interns work closely with their rotation psychologist(s) and receive a minimum of 2 hours/week of formal individual supervision as well as informal supervision. The seminar series includes a wide variety of topics in a small group, seminar setting. Attracting, training, and supporting interns from diverse ethnic, socioeconomic, religious, sexual orientation, and other diverse backgrounds is a critical value for our internship. This reflects our training focus with respect to working with seriously and persistently mentally ill clients in a public setting. That population is an extremely diverse and under-served one, and we strive to maximize our interns' ability to work with and reflect that diversity.

Program Description

Denver Health is an integrated urban health care system that is a national model for high-quality efficient care and is Colorado's largest safety net institution. The population is ethnically diverse (Latino(a), Caucasian, African American, Native American, and Asian) and largely low SES. The Psychology Internship features major rotations in Health Psychology, Adult or Child/Adolescent Outpatient Mental Health, Inpatient Adult Psychiatry and Inpatient Consult Liaison Psychiatry. Health Psychology includes integrated primary care and health coaching in disease management. The Inpatient and Outpatient rotations include intervention with the full gamut of psychopathology as well as some psychological assessments. The primary focus is supervised direct clinical service, working with attending psychologists on multidisciplinary teams. Interns participate in several hours per week of didactic training, help educate other health care professionals about psychology, and may provide supervision (under supervision of a licensed psychologist) for psychology trainees. Biopsychosocial and life span developmental models as well as applied understanding of cultural and individual diversity inform training and clinical services. This a generalist internship in which all interns learn about a variety of populations, intervention strategies, and scientific perspectives. However, each applicant selects rotations of special interest as part of the APPIC match process. The program offers five designated combinations of major rotations each with a unique match number (see brochure). Interns can select elective rotations in neuropsychology, the psychiatric ER (a separate unit within the medical ER), oncology, geriatric or pediatric primary care, bariatric surgery evaluation and other areas. This is a teaching hospital for the University of Colorado and education is a core value in our mission statement. Please see the program brochure at www.denverhealth.org for further information.

Program Description

Goodness-of-fit model used for selection to obtain diversity (geographic, racial, ethnic) in our intern group. Program has a generalist orientation, with opportunity for areas of focus including health psychology, neuropsychology, chronic mental illness, and suicide prevention. Psychological assessment is a component of most rotations. Please see our web page for a complete description of the internship program.

We have two tracks:

117411 - General Track (4 slots)

117412 - Primary Care-Mental Health Integration (PC-MHI) Track (1 slot)

All five slots provide the same excellent generalist training in clinical psychology. Interns in the General track will select three major and three minor rotations. The intern accepted to the PC-MHI track will have all three major rotations in the Behavioral Health Lab. Minor rotations can be selected by the intern, and all other training requirements apply.

Program Description

The Internship at Metro State's Counseling Center is a full-time, 2000 hour training program, requiring 500 direct clinical contact hours for graduation. The program is designed to offer pre-doctoral interns an intensive, supervised experience in a college counseling setting. It is our goal to train interns to become skilled, ethical, independent mental health professionals capable of functioning competently in a variety of settings, including a university. Interns are supervised by licensed psychologists. A host of experiences are provided for interns including: Weekly Professional Development; bi-weekly Psychiatric Consultation; Diversity Training; Outreach and Consultation; Individual Supervision; Group Supervision; Staff Meetings with all Center Staff; and Supervision of practicum students. Interns provide the following services: Individual and couples therapy utilizing a brief therapy model; psychoeducational and therapeutic support groups; crisis intervention; emergency assessment; walk-in/intake assessments. Interns complete four assessment batteries with Center clients during their internship. Ongoing training and supervision is provided to interns as they complete this requirement. Opportunities are available for interns to participate in outreach and educational programs provided for the college community which include diversity and general topics. Interns may have the opportunity to provide presentations/lectures in college classes on Center services and/or topical areas. Some degree of self-disclosure is expected at training sessions and all staff retreats but in keeping with the intern's comfort level. Interns receive vacation/sick/professional development leave, and 10 paid holidays. Two hours weekly may be granted for dissertation research, up to a total of 30 hours. As employees of the college, interns have access to campus recreation facilities, library, and a wide range of campus activities on a very vibrant and active campus.

Program Description

CSUHN is an integrated mental health and medical service serving both undergraduate and graduate students within a large land-grant university. The training of clinically-competent, ethical, self-aware, and culturally sensitive psychologists is central to our mission. The training program is based on a practitioner-scholar model, which values learning both from direct experience and the scientific literature. A developmental focus is reflected in graduated training experiences and expectations. As trainees gain experience, expectations for more advanced professional skills, greater self-awareness, and autonomous functioning increase. In addition to individual and group supervision, Interns participate in six seminars. All Interns receive a solid base of training in individual and group therapy, crisis intervention, supervision skills, assessment, outreach and prevention, and diversity issues. Opportunities exist for Interns to individualize their training with Rotations in Behavioral Health, Substance Abuse, and Intensive Outpatient Treatment (iTEAM) or by creating Special Interest Areas. A fairly unique aspect of the internship is the close collaboration with medical, social work, and other professions afforded by this integrated site. Presenting issues of clients range from the expected developmental concerns of college-aged students to severe mental health diagnoses, including psychoses and Axis II disorders. Staff come from an array of theoretical orientations, including Existential/Humanistic, Interpersonal, Cognitive Behavioral, Emotion-Focused, Gestalt, Solution-Focused, Positive Psychology, Feminist, and Psychodynamic. Close working relationships have been developed with the various Diversity Offices on campus, as well as with other university offices and departments.

Program Description

Colorado West Regional Mental Health, Inc. (CWRMH) is the largest provider of mental health and substance abuse services on the Western Slope of Colorado. CWRMH covers a ten-county region in northwest Colorado. Grand Junction, in Mesa County, houses the largest and busiest clinic. The 9-acre campus includes an outpatient clinic for children, families, and adults, a crisis response facility, a detox center, and a psychiatric hospital. The primary rotation for interns is in the outpatient clinic providing services to adults, adolescents, and children. There may be opportunities for inpatient evaluations and assessments. Attendance at weekly team staffings is required. Treatment teams are multidisciplinary and include psychologists, psychiatrists, and mental health clinicians. CWRMH works closely with other community agencies, and there will be opportunities for collaboration and consultation with other agencies. Typically, interns spend the majority of their time working with outpatient clients. This includes completing intakes, conducting individual, group, and family therapy, and conducting psychological assessments. Opportunities to provide supervision to practicum students may be available. Interns will gain experience in behavioral health through a minor rotation in integrated care. Interns will complete a year-long research project. Crisis experience, with the Mobile Crisis Response Team, may be available. Interns participate in a weekly coffee meeting with the Training Director, didactic seminars, and individual and group supervision. Time is allotted for interns to work on their dissertations. Interns are required to complete a minimum of eight integrated testing evaluations during the year. Minority applicants are strongly encouraged to apply. *Please email the training director for a copy of the training brochure prior to submitting the application.

Program Description

Our program is designed to provide broad-based professional training in activities carried out by psychologists in a university counseling center. Interns will develop competence in individual & group therapy; intake assessment; provision of supervision; crisis intervention; outreach; personality assessment; and ethical and multicultural practice. Our philosophy of training incorporates a generalist, developmental-apprenticeship perspective that combines mentorship and experiential learning to foster increasing autonomy. Overall, we seek to create an atmosphere of respect and trust where interns and professional staff support each others' growth. Diversity is celebrated and integrated into all aspects of training. Staff members utilize a variety of theoretical orientations, including interpersonal, existential-humanistic, systems, cognitive-behavioral, psychodynamic, mindfulness-based, etc. We recognize that each intern brings a variety of skills, experience, and training needs to the internship and that some flexibility is necessary for optimal growth. This is accomplished by providing individualized supervision goals, customized outreach and consultation projects, opportunities for special interest areas, and intern input for various seminars and activities. We see the internship year as a critical transition period. We seek to assist in this developmental process by providing interns opportunities to stretch, take risks, and try out different interventions. Interns will also become more proficient in delivering interventions that are supported by research. Furthermore, interns will develop and hone greater sensitivity to, and respect for, the multicultural world in which we exist. We are looking for flexible, motivated, open individuals who want to learn and grow, and who are passionate about providing services to the college population. We seek applicants whose career goals involve working in a university setting and who have at least 100 hours of individual adult therapy experience. Limited after-hours and weekend work are required.

Program Description

A forensic teaching hospital, CMHIP provides broad based training in the evaluation and treatment of patients with complex mental health problems including severe and persistent mental illnesses. We provide evaluations and treatment to a diverse patient population committed to CMHIP by Colorado's courts under criminal codes related to the treatment of the psychiatrically ill. Services are provided for individuals pre-trial and post-conviction following acquittal as NGRI. CMHIP employs 37 full-time psychologists; 28 are Colorado Licensed Psychologists and 9 full-time early career psychologists pursuing licensure. Our APA Accredited internship is founded on the Local Clinical Scientist training model. We emphasize the integration of psychological science and clinical practice via experiential learning. We provide effective supervision, advanced didactic trainings, and opportunities for professional interactions and modeling to meaningfully and substantially further interns' preparation for practice. We provide relevant knowledge and experiences pertaining to cultural competence in psychological phenomena and professional practice. Interns learn supporting theories and provide evidence-based treatments (i.e. CBT, DBT, Social Learning Theory, Behavioral Therapy). They also learn the targets of forensic psychological assessment and develop proficiency in selecting, administering, scoring and interpreting appropriate psychological instruments for court ordered evaluations. Interns work as members of interdisciplinary teams to provide diagnostic assessments, evidence-based treatment interventions, and individual and group psychotherapy to patients at CMHIP. We have 3 four-month rotations and 2 minor yearlong rotations (Individual Therapy and Generalminimum of two hours of individual supervision and three hours of group supervision each week. Interns' training also includes supervision of externs on a weekly basis.

Program Description

Scholar-practitioner program with integrative model incorporating developmental/psychodynamic theoretical orientation and contemporary cognitive and cognitive-behavioral intervention models. Evidence-based approaches to assessment and treatment are stressed. Child track, adult track, and Cognitive-Behavioral track each with 3 four-month rotations. Adult track includes rotations in adult acute inpatient treatment (assessment, treatment and case management and use of brief individual, group, and family treatment), intensive outpatient group treatment of patients in Professional's or Young Adult Program or DBT Program, and extensive psychological assessment. Intern with CBT focus will have year-long part-time placement in the Anxiety Disorders Center in addition to their IOP and inpatient rotations. Outpatient electives in anxiety disorders, brief psychodynamic psychotherapy, behavioral medicine and health psychology, and schizophrenia rehabilitation also offered. Child/adolescent track includes rotations through acute inpatient treatment (assessment, individual, group, and family psychotherapy, case management), comprehensive psychological testing, pediatric inpatient consultation and outpatient psychotherapy with patients at Connecticut Children's Medical Center, and school-based individual and group psychotherapies. Electives in anxiety disorders, neuropsychology, early psychoses, eating disorders also available.

Program Description

Founded in 1809, the Village is a large, private, non-profit, multi-service agency with a strengths-based, community-centered philosophy. The agency mission is "to build a community of strong, healthy families who protect and nurture children." Interns work in the Enhanced Care Clinic (an outpatient mental health facility), and complete comprehensive psychological evaluations and professional development/research projects. Supervision, advanced seminars, and team meetings are integral aspects of the training. The internship program, along with the agency as a whole, is fully committed to the ongoing pursuit of cultural competence. Village clients are diverse in terms of racial and cultural identity. Many have histories of significant trauma, as well as complex life circumstances. The work is both challenging and rewarding. Interns who are a good match with us are generally those who have strong assessment and intervention skills but who also possess and demonstrate energy, flexibility, a sense of humor, and the willingness to continue learning. Our goals include: 1. Competence in working professionally with diverse individuals, groups and communities, and addressing the needs of diverse, vulnerable, and underserved populations; 2. Competence in psychotherapeutic interventions with children, adolescents, and families from diverse, vulnerable, and underserved populations; 3. Competence in assessment and diagnosis of problems, capabilities, and issues associated with individuals and families; 4. Competence in interdisciplinary functioning and consultation skills; 5. Competence in professional values, attitudes, and ethics; 6. Competence in reflective self-practice, self-assessment, and self-care and the effective use of supervision. Candidates should have a minimum of 1200 practicum hours, with 600 hours being direct client intervention.

Program Description

The following is taken from the program web site at: <http://www.ct.gov/dmhas/rvs/brochure>

The Connecticut Valley Psychology Internship subscribes to the traditional definition of the scientist-practitioner model for training professional psychologists that gives substantial credence to intensive scientific training balanced by intensive exposure to clinical experience, clinical training, and the development of professional standards and systems of care. The mission of the program is to train public-sector and public-sector-sensitive practitioners with the skills and values necessary to treat people with severe and persisting mental disorder, as well as to provide clinical psychological services to those members of the general population who, for financial reasons, cannot access mental health care elsewhere in the community. In our training model, we seek to engage in ongoing integration and communication of the principles of psychology, not merely the acquisition of facts and techniques. We see our implementation of the scientist-practitioner tradition as promoting how interns think about clinical practice, how they communicate their thinking, how they evaluate the outcomes of their thinking, generate new knowledge, and subsequently adjust their professional practices accordingly. We agree with Belar and Perry (1992) who describe the essence of the scientist-practitioner training model as turning out psychologists whose training integrates science and practice and who can function as investigators or practitioners consistent with the highest standards of the profession.

Program Description

The pre-doctoral internship is a full-time training and supervised experience which consists of 2,080 hours over twelve months in duration. The program begins at the beginning of September and extends through August of the following year. Two interns will be selected for the 2014-2015 training year. One intern will work with children/adolescents at the Family Advocacy Program clinic and one intern will work with adults at the outpatient Center for Behavioral Health. Training experiences include individual psychotherapy, group psychotherapy, family therapy, intake evaluations, and psychological testing. The overall goal of the program is to prepare advanced graduate students for generalist practice in a multitude of mental health settings. The internship program serves clients with varied ethnic backgrounds, socioeconomic status, and presenting problems. Conditions treated usually include major depression, bipolar disorder, PTSD, and anxiety disorders. Several clients have comorbid substance abuse problems. Interns function as an integral part of an interdisciplinary team of psychologists, psychiatrists, nurse practitioners, and social workers.

Program Description

Yale offers one of the nation's premier internships in clinical and community psychology, which has been accredited by APA since 1970. A total of 17 interns train each year in one of dozen placements within a vibrant academic medical center where the emphasis is on state of the art clinical care, professional education, and research. The program embraces a scientist-practitioner model in which theory and evidence inform professional practice and each intern has protected time to pursue a scholarly activity. The internship is part of a nurturing professional community of psychologists that values and promotes diversity among the faculty, interns, populations served, and theoretical perspectives. A priority is placed on professional development, including assistance to interns in securing opportunities after internship. Each year, many graduating interns remain at Yale to pursue postdoctoral training and research. There are over 200 psychology faculty members in the Psychiatry Department and they are leaders in the field, as evidenced by their record of grants, publications, awards, and roles in professional organizations and government-sponsored boards and committees. As a group, they are passionate about training the next generation of psychologists. For more information go to www.psychologytraining.yale.edu.
 Note: This internship requires a minimum of 450 AAPJ Intervention and Assessment hours <au0,3>combined<cxu.

Program Description

The Yale Child Study Center is a two year integrated clinical internship and postgraduate fellowship. The internship is the first of two required years and provides general training in child clinical psychology with an emphasis on psychological assessment. During the internship year, 10-15 hours per week are dedicated to specific areas of specialization: Early Childhood, Pediatrics, Autism/Developmental Disorders, or Children and Trauma. The second year provides the opportunity to meet requirements for licensure; the generalist components of the program focus on hospital based work, including serving as a primary clinician in an inpatient setting, and the remaining 50% time is dedicated to the area of specialization. Please refer to the Yale Child Study Center training program website for further details (<http://childstudycenter.yale.edu/psychology/inde>).

Program Description

The Child Guidance Center of Southern Connecticut doctoral internship program provides a varied experience that will support interns in the development of their base of knowledge, their clinical skills, and their professional identity. Interns will receive training in individual, play, family, TF-CBT, and group psychotherapy. As we are a community-based agency, our interns will gain experience working with a patient population that is diverse with regard to ethnicity, SES, and diagnosis. Training therefore includes emphasis on broad-based and empirically validated skills involved in listening and communicating with child patients across these spectrums. Training additionally includes emphasis on the development of cultural competence. The internship will include comprehensive training in clinical and developmental assessment with a strong emphasis placed on the synthesis of dynamic, systemic, cognitive, biological, environmental & cultural influences. Interns will gain experience in cognitive, educational, projective, & neuropsychological testing, though due to Medicaid regulations in Connecticut, only non-Medicaid patients will be tested by interns. Interns will also participate on treatment planning teams, in staff seminars, didactic seminars designed specifically for trainees, and case conferences. Training begins with a week-long orientation to the Center which includes, among other things, learning clinical procedures, tutelage in the use of our electronic record system, meeting with all supervisors, description of agency programs, mandatory reporter training, and receipt of all seminar schedules and syllabi, along with receipt and discussion of the agency's grievance and due process procedures for interns.

All interns will be required to present a case conference before the end of the internship year. There will also be the opportunity for interns to receive training in specialty areas such as sex abuse investigations, pre-school consultation, parent engagement, and crisis intervention. Training will take place through a variety of modalities including 2 hours weekly of individual supervision for treatment cases provided by 2 licensed psychologists/supervisors. Didactic seminars in neuro and psychological testing, family systems work, play therapy, group therapy, CBT, TF-CBT, and work with parents will all include the opportunity for case presentation and group supervisory experiences. Additionally, interns participate in all staff and psychology seminars, staff treatment planning teams, staff case conferences, and staff administrative meetings.

Program Description

We offer clinical training in providing cognitive and behaviorally focused evidenced-based treatment approaches (including TFCBT and PCIT) to ethnically diverse low-income children, adolescents and their families in home, school, community and residential settings. Interns work as part of a multi-disciplinary team including psychiatrists, counselors, nurses, teachers, and creative arts therapists. Rotations are in 6 month blocks and all interns rotate through residential treatment, day treatment, crisis and intensive outpatient programs (4 days per week) as well as assessment and juvenile justice residential programs (1 day per week). Residential treatment (about 6 months duration) provides a secure, supervised setting for children who temporarily cannot live at home due to the severity of their problems. Treatment includes behavior management, individual, group and family therapy. Day program (about 5 months duration) provides education and therapeutic services for children who cannot function in their local school. The program provides a highly structured environment where children can learn to maintain appropriate self-control and display appropriate social skills in a school setting. Youth in the day program receive individual, family and group therapy. Crisis Service consists of short term (3-7 days) bed admission to stabilize functioning through individual, family and group therapy. Intensive Outpatient (about 6 month duration) provides intensive, home and community-based service. Experience is gained in school consultation, individual, group and family therapy. In the assessment rotation, Interns complete 5-6 integrated assessments. Interns also provide individual therapy and behavioral consultation for youth committed to a juvenile justice residential program. Additional year-long experiences include weekly didactics, case presentation and clinical team meetings. Opportunities to supervise practicum students may be available.

Program Description

The graduate internship program offered by the Center for Counseling and Student Development at the University of Delaware is designed to provide supervised experience in individual and group counseling, consultation, student development programs, career development, and supervision. The staff has a deep commitment to training and supervision and see the internship as a critical year in refinement of clinical skills and development of professional identity as a psychologist.

Program Description

As a Behavioral Health division in a children's hospital, we strive to provide broad-based training in both child clinical and pediatric psychology. Interns are exposed to a diversity of patients and gain extensive experience in case formulation, intervention, evaluation, and consultation. Patients range from emotional and behavioral difficulties (depression, ADHD) to more rare conditions with significant behavioral components (e.g., adjustment post organ transplant). Given that the duPont Hospital for Children is the only children's hospital in Delaware and draws from three surrounding states, interns are exposed to a range of presenting problems. Opportunities for experiences with children and adolescents presenting with diabetes, asthma, cancer, transplant, abdominal pain, encopresis, headaches, seizure disorders, OCD, bipolar disorder, ADHD, pervasive developmental disorders, disruptive behaviors, anxiety, depression, family problems, eating difficulties, and other adjustment difficulties. In general, diagnostic evaluations include assessment of: intellectual, memory/attention/information processing abilities and academic functioning; personality and behavioral adjustment; neuropsychological functioning; and early childhood development. Consultation and treatment opportunities include individual, family, and group therapies; medical inpatient and outpatient consultation include medical adherence, pain management, adjustment to chronic illness; transplant pre-evaluations and treatment; and school consultation. Interns also participate in primary care consultation. Faculty are primarily cognitive-behavioral and family-systems oriented but also represent and appreciate different theoretical approaches with empirical bases. A variety of post-doctoral opportunities are available. Currently, seven Postdoctoral Fellowships are funded.

Other Application Requirements
If you are matched for a position, you will be required to complete a DC 2000 government application form. Further, in accordance with DC Department of Mental Health's human resources policy, we also require an employee physical examination with tuberculosis skin test and criminal background check to be completed prior to coming on board at the hospital.

Program Description

Saint Elizabeths Hospital, in Washington, DC, is a publically funded inpatient psychiatric hospital, with approximately 300 beds distributed among 11 forensic and civil units. Our program offers the opportunity to develop your clinical skills while working with a severely mentally ill urban minority population and prepare for your career as a psychologist in the mental health workplace. Our faculty is composed of excellent clinicians who are role models for psychologists in public mental health careers. They have a wide range of clinical experiences and training which they draw upon in educating you in how to work with the severely mentally ill in an inpatient setting. We believe that we offer a challenging and varied educational experience that exposes you to the many different roles that psychologists play in a public mental health hospital and to the different stages of psychopathology as patients undergo treatment. The Training Model employed is the Practitioner Apprenticeship Model which is characterized by learning by doing and refinement of clinical skills under the guidance and supervision of experienced practitioners. Trainees spend the majority of time (75%) in service delivery. Training setting is hospital-based with opportunities to work with the severely mentally ill and an urban minority population. Trainees will have an opportunity to work with Civil (voluntary and civilly-committed) and Forensic (for individuals committed by the legal system) patients. Trainees' preferences are considered in making rotation assignments. Each intern completes both a major and minor rotation for the duration of the twelve months. A major rotation consists of approximately 16-20 hours per week of clinical services that are divided into 6-month rotations over the year on two units in the hospital (6 months on an admissions or pretrial house and 6 months on a long-term house). Clinical experiences include ongoing psychotherapy cases of various modalities (group, individual), psychological assessments, and other placement duties such as rounds/team meetings, treatment planning conferences and case management. In addition, trainees participate in a variety of didactic seminars throughout the training year. Please email the program at seh.psychtraining@dc.gov to request the Internship brochure which includes additional information, including minor rotation options.

Program Description

The Howard University Counseling Service Internship training program uses a practitioner-scholar model to prepare interns to be well-rounded, entry level psychologists with special competencies in working with diverse populations. Interns complete one full year of specialized training in the substantive area of clinical/counseling psychology. A degree of self disclosure is expected. The work load is as follows: Direct Service Activities; Training Activities; Administrative Activities; Professional Development; Personal Development; Teaching and Supervision. Our program utilizes a psychodynamic theoretical orientation, brief and long term therapy models and includes special training in group therapy. The core training program consists of learning experiences in the following areas at HUCS: individual & group counseling & therapy, intake interviewing, psychodiagnostics, University outreach, teaching, and supervision. There are also 3 rotational placements. The first rotation is at Howard University Hospital Inpatient Psychiatry Unit. Interns go there one day a week for 4 months. On this rotation they learn about inpatient treatment from the psychiatry team. The second rotation is a forensic assessment rotation and takes place at the District of Columbia Superior Court's Child Guidance Clinic. Interns go to the court one day a week for 6 months and conduct psychological assessments. The third rotation is a two-month rotation based on individual choice. In the past, interns have chosen rotations in assessment, outreach, trauma, group, administration, etc. The 2007 class wrote a screen play on mental health stigma in college students of color which was made into a DVD, entitled *Lost & Found: a college story*. It is used across the US to increase help seeking behavior. The program also includes a biweekly research seminar during the first semester and a diversity seminar which takes place over one full day or two half days.

Please upload 1 testing & 1 treatment report. Matched interns that fail the court required criminal background check that includes fingerprinting, will be expelled from the internship.

Program Description

The internship program trains interns to conduct forensic assessment, evidenced based individual and group psychotherapy, consultation/training, program evaluation so as to integrate research, theory, and practice. The internship emphasizes comprehensive psychological assessment and treatment with juveniles in a court setting. African-American adolescents involved in the juvenile justice system are the primary clients of the Clinic. Supervised forensic training with children and adults is available via minor rotations offered through affiliations with the Howard University Counseling Service, Child Advocacy Center, and the Forensic Legal Services branch of St. Elizabeths Hospital. The training staff's eclectic and evidence based orientation is sensitive to developmental and cultural factors in assessment and treatment. The goal of the training program is to produce well-rounded entry level psychologists with both general and specific skills. The program is accredited by the American Psychological Association; the internship's current accreditation status may be verified by calling the Commission on Accreditation at 202-336-5979.

Program Description

The American University Counseling Center's full-time internship is accredited by APA*. It was founded in 2001. The internship program has been designed to provide interns with the opportunity to assume the responsibilities and tasks of the Center's professional staff with the support and supervision necessary to make them successful in this endeavor. The training program provides training in both short and longer term models of individual psychotherapy, group psychotherapy, diagnostic interviewing, outreach programming, crisis intervention, and supervision of trainees. Interns can expect to enhance and develop their understanding of psychodynamic theory and its application to the college population. Staff members have also been trained in other theoretical orientations and can help guide interns on how to utilize these orientations as well in their work. The ultimate goal is to help foster the intern's own therapeutic style. Interns can expect a strong commitment from the Center to providing the support and supervision necessary in developing their skills. The staff is deeply committed to its own development of skills. Interns will have the opportunity to participate in the weekly staff development time as well as develop their theoretical understanding and skills in activities geared specifically for them. The program offers interns the opportunities to work with many of the staff and within a variety of contexts to help expose the intern to many different personal approaches and styles in helping them develop their own.*

Program Description

The doctoral internship offered by the Counseling Center at The Catholic University of America is designed to provide supervised clinical experience in individual and group psychotherapy, consultation and outreach, crisis intervention, and supervision. Senior staff supervisors have a variety of theoretical orientations, and the orientation of internship training as a whole is integrationist. The internship received accreditation from the American Psychological Association (APA) in April 2010. The aim of the internship is to provide graduate interns with a comprehensive, well-organized training experience, focusing on the continued development of the professional skills necessary for successful functioning as a professional psychologist. Our interns are regarded as an important part of the agency, are respected as full-time professional staff, and are expected to work closely with senior staff as colleagues. Emphasis is placed upon working with different treatment modalities and collaborating with colleagues of different theoretical orientations.

Program Description

The goal of the BPVA HCS Psychology Internship Training Program is to prepare Interns for competent entry into the increasingly complex roles of Clinical or Counseling Psychologists. The program adheres to a Scholar-Practitioner model. The training of new psychologists is regarded as a serious responsibility by our staff with significant investment of time and energy in all facets of the Training Program. The didactic and clinical experiences of this program are designed to facilitate the professional attitudes, competencies and personal resources essential to the provision of high quality patient care of contemporary psychological services. As mentors, the staff seeks to demonstrate and encourage Intern participation in the professional roles of clinician, consultant, team member, supervisor, evaluator, researcher and crisis intervener. The professional growth and development of Interns is enhanced by consistent supervision, varied clinical responsibilities with diverse patient populations, continued didactic training and opportunity for research, teaching and administrative/management involvement. The Internship year is divided into four major rotations of 3 months each. We offer both a General Psychology and Neuropsychology emphasis track. With Training Committee approval, Interns are encouraged to select 4 rotations from the various rotations offered in order to meet their individual interests and training goals. Neuropsychology emphasis trainees are encouraged to consider a double rotation within the Neuropsychology program. Regardless of track, at a minimum, interns are expected to achieve foundational competencies in (a) assessment/diagnostics; (b) individual and group interventions, including psychotherapy; (c) consultation and treatment planning; (d) professionalism and ethical/legal standards and policy; (e) sensitivity to individual differences and cultural diversity; (f) supervision; and (g) scientific knowledge and methods, which can include applied research/evaluation and/or quality systems (QS) or performance improvement (PI). For research activities, an intern can select to work on an individual project with a staff mentor or, as a group on a QS/PI project with the TD. In the case of an individual project, the intern would be expected to select a research mentor, develop a research plan including timeline with clearly identified, measurable objectives/goals. Additionally, interns interested in additional training in teaching, or management-administration and leadership development may build these competencies into their training plan as well by electing to participate in ongoing administrative activities (e.g. program development) or teaching activities.

Program Description

An integral part of the Faulk Center for Counseling is the clinical training of future professionals. Formal training of psychologists has existed at the Center for over 30 years. The internship program offers interns intensive training in the areas of psychotherapy, assessment, and consultation. The Center offers a unique and intensive experience in which interns may develop their personal identities as psychologists. The Center embraces a humanistic, person-centered philosophy which is integral to all clinical services. However, interns are expected to study and practice modalities based on other theoretical orientations, such as psychodynamic, interpersonal, cognitive behavioral, and family systems therapy. At the Center, the intern works alongside clinical psychologists, social workers, mental health counselors, marriage and family counselors, and master's level students of all disciplines, as well trained volunteer facilitators. Each intern has the opportunity to work with a variety of populations and in a variety of settings, which include residential facilities for seniors and public schools.

Program Description

Manatee Glens Internship Program

Training Objectives and Goals: Manatee Glens psychology interns will develop a broad-based expertise in psychotherapeutic skills, psychological assessment, and community consultation. Interns are expected to develop an awareness of individual differences and to be able to recognize and understand a wide range of personality styles & psychopathologies, with their impact on all areas of functioning. Interns should thoroughly understand and be proficient in the provision of services involving intellectual, emotional, psychological, and behavioral disability. Interns should be able to provide services to clients who express discomfort related to personal, social, and work/academic dysfunction with the highest ethical and professional demeanor. Interns will develop an understanding of the effects of trauma on the functioning (e.g., educational, social, personal, behavioral) of clients across the lifespan.

It is expected that by the end of the internship, interns will have developed competencies in psychodiagnostic assessment, provision of individual, group, & family psychotherapy, and consultation.

Training is completely at a post-practicum, predoctoral level. MAJOR & MINOR ROTATIONS MG Outpatient Rotation: Manatee Glens Clinic-379 6th Avenue West-Bradenton, FL 34205- paMG Hospital Rotation: Manatee Glens Hospital-2020 26th Ave E-Bradenton, FL 34205- paMG Assessment Rotation: Assessment Center-379 6th Avenue West-Bradenton, FL 34205- paSuperv: Dr. Bart Hodgens-http://www.manateeglens.org/manatee_glens_psychology_internship_mgcmgs.php- paManatee Glens Consortium - Manatee Glens Site- paPNS Outpatient Rotations: Psychological & Neurobehavioral Services- pa631 MidFlorida Drive- paLakeland, FL- paManatee Glens Consortium - Psychological & Neurobehavioral Services Site There will be two rotations for this internship. Through these two rotations, interns should be exposed to a broad range of experiences. POLICIES & PROCEDURES **APPIC/APA STATUS** <paManatee Glens has been an APPIC-accredited intern site since 2005. Though we currently appear to meet the requirements of an APA internship site, we have no immediate plans to seek this accreditation during this internship year. </p>**AVAILABLE INTERNSHIPS** For 2014-2015, there are a number of available full-time internships amongst our consortium members. **APPLICATION PROCESS** Manatee Glens participates in the APPIC Match and utilizes the Online APPIC application materials. In addition to those materials, a child psychological assessment is required for applicants wishing to be considered for the Manatee Glens site and a neuropsychological evaluation is required for those interested in the Psychological & Neurobehavioral Services site. Completed packets for 2014-2015 must be submitted no later than November 8; incomplete packets will not be reviewed. Upon review by the Director of Clinical Training, the Rotation Supervisors and other program managers (fApplication Committee§), prospective interns will be contacted to arrange interviews. Such interviews will include direct contact with psychology supervisors and current psychology interns on a day arranged for intern interviews. Interviews will begin on specific Thursdays or Fridays beginning in December. <paPhone interviews can be arranged in unusual circumstances. After completing such interviews, the Application Committee will decide who it will offer internships to for the coming year and will rank order such prospective interns following all APPIC Match policies. <paTITLE Interns will be designated as fPsychology Interns§ in all Consortium communications, in all Consortium documentation and in all public information dissemination. Regarding the latter, it will be clear at all times that the fPsychology Intern§ is not able to practice independently and is functioning under the direct supervision of a licensed psychologist. <pa DURATION/DIRECT CLIENT CONTACT This internship will consist of a minimum of 2000 hours, conducted over a 12-month period. Extensions beyond the 12-month period will be considered in cases where situations arise that would not allow the accumulation of at least 2000 hours. A 40-hour work week is the expectation of this internship. During that week, present interns have reported up to 60% direct client contact; direct clinical experience above 25% of your time is guaranteed. <paSTIPEND There is a paid stipend for this internship; the anticipated stipend is \$15,953 for 2014-2015.

Program Description

See comprehensive on-line brochure (updated annually early fall). Four months in each of 3 unit placements; 40-hr workweek in CARF-accredited historic state hospital with 1000+ beds. 83 forensic beds for women. Residents with forensic commitments occupy most of the civil unit beds. Large psychology staff has independent responsibility for forensic reports. Flexible individualized internship focused on criminal forensic issues and public service to underserved adults. Unit placements rely on intern choice and group discussion. Can have 3 forensic placements, focused on assessment, treatment, & consultation. Interns use & refine clinical skills of interviewing, group & individual therapy, assessment, and testing, all done as part of multidisciplinary team using holistic, recovery approach. In addition, interns learn forensic skills to write court reports, provide competency restoration, conduct risk assessments, assess response style, and make NGI transfer & release recommendations. Plan, implement, and evaluate treatment, supervised by staff psychologists. Emphasis on mentor-style individual supervision, often in-vivo, plus weekly group supervision. Seminars emphasize forensic topics early in year, then become more general and include intern topic choices. Intern must have strong writing skills to produce well-organized, logical, clearly written reports for criminal courts, and the clinical maturity to provide services to individuals with severe mental illness, personality disorders, and behavioral disturbances. Intern is expected to make thoughtful choices among numerous options to help formulate cohesive individual training plan. Many interns have elected to stay for postdoctoral supervision in staff psychology jobs.

Program Description

The University of Miami Counseling Center internship program utilizes a General Practitioner Training Model in providing a closely supervised training experience in intervention, assessment, and outreach/consultation within the context of working with clients from diverse cultural backgrounds and lifestyles. It is expected that interns who successfully complete the program will have developed the fundamental skills and knowledge to launch professional careers in a wide array of clinical settings, not limited to a university counseling center. Efforts are made with interns to individualize their training activities in view of their specialty areas and past experience. The availability of summer external rotations in several diverse clinical areas and the involvement in our program of clinical practitioners from the South Florida community facilitate a well-rounded training experience. In addition to individual supervision, the program offers seven ongoing seminars/case conferences during the fall and spring semesters. The theoretical orientation of the training staff can be described as eclectic. Since the program adheres to a General Practitioner Training Model, previous counseling center experience is not required and students from both clinical and counseling programs are encouraged to apply.

Program Description

The Internship Program at the Neurobehavioral Institute of Miami is designed to be an intensive, clinically-rich experience, complimented by an academic curriculum which includes lectures, seminars, literature reviews, and case studies. It is a 12 month program, with 2000 hours of intern participation. On going guidance and support by a senior staff psychologist while services are being performed by the interns is a very important feature of the program. The primary goal of the Internship Program at the Neurobehavioral Institute of Miami is to train highly qualified doctoral level clinical neuropsychologists, who will have very well developed expertise in the selection, administration, and interpretation of neuropsychological instruments, and who are able to intervene effectively on behalf of their patients and their families through the use of cognitive rehabilitation, verbal supportive psychotherapy, as well as applied behavioral analysis.

Program Description

The Visiting Mental Health Internship program is a division of a privately owned psychotherapy firm in sunny South Florida. The program goal is to pair interns with qualified mentors who will promote professional, meaningful, first-hand experience and knowledge in the field of psychological services. Interns will be able to provide compassionate care with people of all ages, races, ethnicities, faiths, gender, sexual orientation, socioeconomic backgrounds and physical abilities with diagnoses ranging from anxiety and depression to paranoid schizophrenia and bipolar disorder. —For inquiries, please contact info@visitingmentalhealth.com

Program Description

South Florida Evaluation and Treatment Center (SFETC) is a 238 bed forensic psychiatric hospital serving adults adjudicated by the court as Incompetent to Proceed to Trial or Not Guilty by Reason of Insanity. The internship is both forensic and clinical in its scope. Nearly all mental disorders are encountered at SFETC, though the most frequent diagnoses are those of schizophrenia, mood disorders, malingering, and substance abuse. The hospital serves a multi-lingual and multicultural population. A number of forensic services are provided by the professional staff to restore individuals to competency or to assist them in living safely in a less restrictive setting. Interns are responsible for completing Initial Psychological Assessments, Risk Assessment, and Functional Assessment of new admissions. They also conduct psychological assessments, including malingering tests. In addition, interns lead competency groups, individual competency sessions, and therapy groups, such as DBT, anger management, and Cognitive Therapy. They perform functional analyses, write behavior plans, and train staff to implement the plans. Interns may also have the opportunity to go to court with their supervisor for Competency Hearings and Medication Court.

The SFCIP is fully affiliated with the Nova Southeastern University's CPS doctoral programs and only accepts applications from NSU CPS students.

Program Description

The SFCIP is exclusively affiliated with the Nova Southeastern University CPS doctoral programs and only accepts applications from NSU CPS students. The South Florida Consortium Internship Program (SFCIP) is a collaborative effort of Nova Southeastern University and cooperating agencies whose mission is to offer a 2000-hour pre-doctoral internship for qualified doctoral students in clinical psychology. The goal of the SFCIP is to train and educate interns to competently practice professional psychology following the Practitioner Informed by Science model of training. Upon completion of the internship, the intern will have acquired the knowledge, skills and professionalism to move to the postdoctoral resident level. SFCIP members are committed to a philosophy of providing interns with the opportunity to acquire generalist skills through the provision of instruction, supervision, and experience in a wide spectrum of functions engaged in by a professional psychologist. The community-based training sites that form the SFCIP provide an array of clinically and culturally diverse populations that offer our interns supervised clinical training and experience during a one-year placement at one of the Member sites (see handbook for site descriptions: http://www.cps.nova.edu/common-pdf/programs/trainingprograms/SFCIP_Brochure.pdf), supplemented by weekly training activities at NSU. Nevertheless, all SFCIP interns are expected to develop proficiency in the execution of a broad range of assessment, intervention, consultation, program evaluation, and supervision skills within community settings (i.e., Consortium partner sites), as well as provide supervision under the supervision of licensed psychologist supervisors. Training in a breadth of clinical issues and ethical and legal professional standards are incorporated into supervision and seminars to further prepare interns for generalist practice and the highest standards of professional conduct.

1000 hrs. total (direct and indirect) practicum hours. Direct service experience with both children/adolescents and adults (min. 100 hrs. with each). If you match to this program, you are required to complete 2 consecutive Friday Orientation sessions in August.

Program Description

The NSU PSC internship program is an APA accredited training program. The Psychology Services Center, formerly known as the CMHC, provides services on a sliding scale fee for service basis to the diverse South Florida community. We provide training in assessment and therapy with children, adolescents, and adults with a wide range of presenting problems in a culturally competent manner. Interns spend 25% of their time working within the Children, Adolescents and Families (CAFS) program and 25% within the Adult Services Program (ASP). The other half of the interns' time is spent in one of four programs, to which the intern matches: Trauma Resolution Integration Program (TRIP), Child & Adolescent Traumatic Stress Program (CATSP), the NSU Counseling Center for Older Adults (NCCOA) or the School-related Psychological Assessments and Clinical Interventions (SPACI). In addition, interns supervise practicum students under the supervision of a licensed psychologist, teach a pre-practicum course for first-year psychology doctoral students in the Winter, and attend weekly didactic activities to round out their generalist training.

Program Description

The Internship Program combines general training in the practice of clinical psychology in a health care setting together with more intensive specialty training in one of three areas: (1) clinical child/pediatric psychology; (2) medical/health psychology; or (3) clinical neuropsychology. Specialty training allows the intern to focus intensively on a major area of professional interest. Specialty training accounts for 75% of the intern's time. General training (which is operationally defined as training outside the elected specialty area) accounts for the remaining 25% of the intern's time, thereby providing opportunities to accomplish both breadth and depth of training. By the conclusion of the internship year, all interns are expected to demonstrate advanced knowledge and competence with respect to their area of specialty within clinical psychology (i.e., clinical child/pediatric psychology, medical/health psychology, clinical neuropsychology, and intermediate knowledge and skills with respect to each of the other areas of their clinical training. Interns may also complete a research project with a faculty supervisor of their choosing. The time allotted for research is approximately 10%.

Program Description

The doctoral internship program is an integral part of the mission of the University of Florida Counseling and Wellness Center (CWC), and the entire professional and support staff is involved in the supervision and training of our interns. The training program is designed to prepare interns to function competently and independently as psychologists. Our goals are: to graduate interns who are clinically competent, highly ethical, culturally sensitive, and who have developed a well-defined professional identity. The program follows a practitioner-scholar model of professional training for psychologists, which emphasizes experiential learning. As a practitioner, the intern applies the knowledge gained from scholarly and scientific evidence to clinical practice. As a scholar, the intern is engaged in study of the science of psychology, and is encouraged to contribute to the profession through involvement in scholarly activities. The training staff represents a wide variety of theoretical orientations. Interns provide individual, couples and group counseling, conduct triage and intake assessment, crisis intervention services, provide outreach and consultation services to the university community, provide clinical supervision to master's and doctoral students in counseling psychology and counselor education, and serve on Center committees. The components of training include supervision; formal seminars, which include series on: therapy, professional development, assessment/diagnosis, diversity seminar, and consultation seminar, among others; participation on a collaborative case management team; consultation with training director and Center clinicians. Interns work closely with other clinicians through co-therapy, co-presentations of workshops, and opportunities for collaboration on presentations at national or regional conferences and/or co-authorship on publications. We have several areas of focus that interns may engage in including: mindfulness, couples counseling, group, social justice work, assessment, anxiety reduction, eating disorders, digital outreach, addictions, DBT, s trauma, crisis intervention, LGBTQ, biofeedback, online therapy, international students.

Program Description

Treasure Coast Forensic Treatment Center (TCFTC) is a 198-bed forensic psychiatric hospital operated by GEOCare, Inc. Residents of TCFTC are adults who have been adjudicated by the court as Incompetent to Proceed (ITP) or Not Guilty by Reason of Insanity (NGRI). Nearly all mental disorders are encountered at TCFTC, though the most frequent diagnoses include schizophrenia, mood disorders, substance abuse or dependence, and/or some type of malingering. TCFTC serves and is sensitive to a multicultural population. A number of forensic and clinical services are provided by the professional staff to facilitate the residents return to court or to the community. Such services include psychological assessments and testing, functional assessments of behavior, various psychotherapeutic groups, rehabilitation programs, competency groups, individual competency sessions and individual therapeutic sessions when deemed appropriate, and competency evaluations. In addition, the department of forensic services is responsible for providing advisory reports to the court, as well as expert witness testimony. Interns are responsible for completing Psychological Assessment Reports, Functional Assessments of Behavior, and Risk Assessments (i.e., HCR-20 and IORNS). They also participate in conducting clinical and forensic psychological tests including those used to assess for malingering. Furthermore, interns are trained to conduct both psychotherapeutic and competency groups as well as individual competency sessions. Interns may assist their supervising psychologist in assessing competency using the Competency Assessment Tool (CAT), as well as preparing other types of status reports to the court. Interns may also have the opportunity to go to court with their supervisor for Competency Hearings and Medication Court.

Program Description

Interns will experience 4 *or* more rotations, but will be involved in providing services in several programs throughout internship. Programs include children's outpatient, child and adult crisis unit, substance abuse (inpatient, outpatient, residential), Outpatient adult, Psychosocial Rehabilitation program for chronic MI. Almost half of our clients are Hispanic & are bilingual. Opportunities for testing experience. However, we currently DO NOT provide neuropsychological assessment. We do see clients referred from court and probation. Opportunities exist for experience in administrative, program development, and supervision of practicum students (if available). Supervision (group and individual) is personal and informal. An integrative orientation is used, with respect for interns' theoretical preferences, but we do tend to emphasize empirical treatments and evidence based treatment. Specialized training is available for treatment of chronic MI, substance abuse, and various childhood disorders. All interns currently have 2 individual supervisors to promote diversity of learning.

Program Description

We are a state inpatient hospital serving about 613 patients whom we refer to as residents. The hospital operates within a person-centered, psycho-social treatment model and has much to offer our residents including a mall area where they can shop at a boutique, get their hair done, use the library, bank, or eat at the canteen. Most are involuntarily committed; about 102 patients have a forensic status. Common diagnoses include schizophrenia, mood disorders, organic disorders and secondarily, substance abuse and Axis II personality disorders. Patients range in age from about 20-90. Interns complete 2 six-month long major rotations and the possibility of several minor rotations. Interns receive at least 4 hrs of supervision per week (including 2 hours of individual supervision and a group supervision during which time interns present cases and discuss ethical and professional issues). There is an additional year-long seminar series where topics including diagnosis and medication, civil commitment, recommitment, sex offender treatment, DBT, trauma, and cultural diversity are presented among others. Field trips are taken to a Board of Psychology meeting. The internship's mission is to provide quality training necessary to facilitate the transitional process from student to professional psychologist possessing core knowledge and skills to work with a primarily severely mentally ill adult population. We are interested in applicants who have experience or desire to work with this population.

Program Description

The Internship Training Program at the Institute for Child and Family Health, Inc. (ICFH), a non-profit community health center, has been accredited by the American Psychological Association (APA) since 1991. The ICFH serves a broad client population from diverse cultural backgrounds presenting with a variety of behavioral, emotional, and health difficulties. The internship program provides experience in individual, group, and family therapy; psychological assessment with 10 comprehensive batteries completed during the year; and consultation with parents, teachers, and a variety of mental health professionals. The psychology internship class consists of six students. Three of the six interns are placed at one of ICFH's two main outpatient clinics. Two interns are placed in the Infant Mental Health Program. One Intern is placed in an outpatient clinic with a focus on providing school-based therapeutic services. Interns receive both individual and group supervision on a weekly basis. Didactic activities include weekly case conferences and seminars covering a range of topics including theory, assessment, intervention, and professional practice issues. For more information visit www.icfhinc.org or contact mgarcia@icfhinc.org

Program Description

The Center provides an array of psychological assessments and intervention services to children, adolescents, and adults. In the area of intervention, these psychological assessments include individual psychotherapy (ages 5 and up), marital/couple and family therapy, and group psychotherapy in specialized topic areas (i.e., Parenting Skills Training). Psychological-intellectual, educational, personality, neuropsychological and other specialized evaluations, and consultation services are also provided. The internship program offers interns a range of experiences upon which to build their theoretical and applied clinical skills. Our aim is to prepare Interns for general practice in clinical psychology as informed by scientific inquiry with a thorough grounding in psychological theory, assessment, diagnosis, intervention, and consultation. These include opportunities to work with patients representing a broad spectrum of psychopathology, conduct diagnostic evaluations and learn a variety of treatment approaches. Pre-doctoral interns typically engage in various forms of psychotherapy, psycho-diagnostic evaluations and consultations. Seminars and didactic trainings enhance developing skills while Interns simultaneously serve as mentors to practicum students.

Program Description

The Internship Program at the Mailman Center for Child Development, Department of Pediatrics, University of Miami Miller School of Medicine offers training opportunities with an emphasis in clinical child psychology, pediatric psychology, and developmental neuropsychology. The program is designed to offer experiences with the child (and his/her family) with, or at risk for, developmental disabilities or behavioral problems due to genetic, environmental, or medical factors. There are opportunities for training in the psychological aspects of traditional developmental disabilities (e.g., mental retardation, autism, and learning disabilities), pediatric psychology, lifespan neuropsychology, and prevention in at-risk populations. Interns will develop certain basic skills and knowledge consistent with the philosophy of the program. There are three aspects of this philosophy. The first is an interdisciplinary developmental focus, consistent with that of the Mailman Center. The second is an intradisciplinary clinical child/pediatric focus, based on the Hilton Head Conference for the Training of Clinical Child Psychologists (1985). Within this framework, we expect each intern to gain experience in clinical/developmental assessment, intervention, prevention, and consultation while working alongside professionals from other disciplines. The third is a multi-cultural diversity focus, acquiring skills to work with individuals from a variety of cultural and economic backgrounds. Within each of these areas, we further expect that each intern will acquire basic knowledge and skills that reflect this training emphasis. Matching to a position involves a 20-hour/week commitment to one funding rotation across the 12-month internship year. The remaining time will be spent on rotations selected to meet the training needs of the intern. The specific 12-month rotation commitment is determined at the time of the match.

Program Description

The clinical experience entails a major rotation working with pre-school children ages 3-5 who participate in the Head Start programs and/or the day care centers under Child Development Services throughout Miami Dade County. We may also serve children participating in the Early Head Start program, 0-3 yrs. old. The minor rotation entails providing counseling services to adults within the Community Action and Human Services Department's programs, i.e. substance abuse, refugee services, elderly/disabled adults, and domestic violence victims. Placement at minor rotation is contingent on program need and funding allocation. Interns will provide formal observations, group interventions/therapy, case management, home visits, play therapy, individual therapy, crisis intervention, teacher and parent consultation, and assessment. Additionally, interns will provide individual/ group therapy, consultation, and case management to adults within the departmental programs. Interns also work closely with the practicum students; they are exposed to a quasi-supervisory role with the master level students. There are also opportunities for the interns to participate in providing presentations and staff trainings within the Department and the community. For detailed information about our internship program, download our Handbook on Psychology Internship Training from our website, www.miamidade.gov/socialservices/psychology-internship.asp

Program Description

Citrus Health Network, Inc. (CHN) is a not-for-profit health care organization accredited by the Joint Commission and the APA. For over 20 years, Citrus Health Network, Inc. has been meeting the diverse needs of persons with mental illness, including: children, adolescents, adults and families through accredited programs and services. We offer a full range of treatment modalities including inpatient, residential and outpatient services, which are based on the most currently accepted research-validated practices and are provided by an exceptional group of professionals from various disciplines. Our staff is highly trained and committed to serving and empowering persons with mental illness and restoring them to their homes and families with an improved quality of life. As of 2004, Citrus Health Network became a Federally Qualified Health Center. This added an array of medical services to our already expansive mental health programs. As a result, Interns and Residents alike, experience a diversity of diagnosis and treatment options as well as the ability to work collaboratively with multiple disciplines throughout their placement.

Program Description

GENERAL INFORMATION

Jackson Memorial Hospital is an accredited, tax-assisted, tertiary teaching hospital with 1,558 licensed beds. Associated with the Florida International University Herbert Wertheim College of Medicine and the University of Miami Leonard Miller School of Medicine, JMH provides a wide range of patient services and educational programs, a clinical setting for research activities, and a number of health-related community services. It is a regional referral center and a magnet for medical research and innovation. JMH's world-renown treatment facilities include the Ryder Trauma Center, UM/JMH Burn Center, Holtz Children's Hospital, Jackson Rehabilitation Hospital and the Miami Transplant Institute. Based on the number of admissions to a single facility, Jackson Memorial is one of the nation's busiest hospitals.

The role and importance of psychologists in the Medical Center has been fully accepted and embraced by all medical disciplines. The psychological stress and emotional trauma associated with a serious injury or disease plays a significant role in the eventual outcome of medical treatment and rehabilitation of medically and/or psychiatrically impaired individuals. Similarly, psychologists are integrally involved in the assessment, differential diagnosis and treatment of psychiatric patients, and there is excellent collaboration between Psychiatry and Psychology in the areas of mental health, consultation of acute medical patients, and Behavioral Medicine and Rehabilitation.

The Department of Psychology provides diagnostic and treatment interventions to both inpatients and outpatients with acute and chronic diseases, as well as physical, psychiatric, and neurological disabilities, as part of a well-integrated multidisciplinary team approach. These comprehensive clinical activities provide a rich environment for the Psychology Internship Program.

The following specialty tracks are offered: Adult Outpatient, Adult Behavioral Medicine/Rehabilitation Psychology, Adult Neuropsychology, Medical Psychology/Consultation Liaison, Pediatric Behavioral Medicine, Child Clinical, Pediatric Neuropsychology, and Deaf and Hard of Hearing.

Program Description

The Program emphasizes scientifically-minded psychologists/practice. The Program believes that a scientific approach to psychological practice is a critical core competency for all psychologists and serves to distinguish psychologists from other health-care professionals. The Program aims to produce competent, scientifically-minded graduates who have the knowledge and clinical skills for entering the professional practice of psychology. It provides an integrated skills training and educational approach based on the scientist-practitioner model resulting in the development of competent, proficient, skilled psychologists serving the needs of our veterans and military patients. Interns are expected to achieve competencies in assessment/diagnosis, individual and group intervention skills, consultation and supervision, assuming a professional and ethical role, cultural diversity, and research/scholarly inquiry. Emphasis is placed on learning the most current techniques and philosophies that are backed by empirical research and recognized as current professional standards. Specific skills are favored over generalist approaches. Intern applicants select an area of training focus among Behavioral Medicine, Geropsychology, Neuropsychology or Psychiatry emphases, and they are interviewed and matched accordingly. The major focus of the internship is on developing clinical skills. All training rotations provide ample opportunities for direct clinical experience within emphasis areas. Intern training activities also include Seminar Series, Case Conferences, Intern Research Colloquia and Group Supervision. Interns are required to complete a minimum of 5 comprehensive assessment batteries and carry a caseload of 2 to 3 Psychotherapy Clinic referrals during the training year. Intern activities related to professional development are also supported by leadership and authorized absences are routinely granted for attendance.

Curriculum vitae, Official Graduate Transcripts, 3 letters of recommendation (two from supervisors of your clinical work).

Program Description

The APA-accredited program at the IACS-accredited Counseling and Psychological Services (CAPS) at FIU is housed on two campuses: one in South-West Miami and one on the bay in North Miami. FIU is a large, young, dynamic, urban, multicultural, multi-ethnic University with approximately 46,000 students. Interns have the opportunity to provide individual, group and couples therapy. Interns are also very involved in crisis intervention. They provide workshops and offer consultation to various departments including athletics, the Health Care and Wellness Center, Victim Advocacy, Disabilities, Student Conduct and Residence Life. We offer unique opportunities in psychological testing and supervision. The internship program is grounded in a Practitioner-Scholar model with a developmental perspective and commitment to diversity. Intern experiences are tailored to meet interns' individual developmental needs and interests, allowing them to select involvement in special projects, committee work and/or research. Supervision is of utmost importance to us and exposure to several of our 16 licensed psychologists is provided. A comprehensive didactic training seminar rounds out the program. Our clinics and supervision are supported by sophisticated technology that facilitates coordination. Besides the internship training program, we also provide training to Practicum and Post-doctoral students, giving interns the possibility to provide supervision. Interns are valued as an integral part of the staff and actively participate on committees and in staff meetings. Please see our Website at www.caps.fiu.edu for a more elaborate description of what we have to offer.

Program Description

The internship program at Miami Children's Hospital's primary purpose is to train interns in the delivery of state of the art psychological assessment and intervention for developmental disabilities, emotional disturbances, and behavioral problems associated with genetic, environmental, and medical conditions of children and their families. To this end, training experiences are offered in psychological assessment, individual and group treatment techniques, consultation-liaison services with medically involved patients, assessment and secondary prevention in at risk populations and parent counseling. All interns are required to participate in training experiences involving psychological assessment, treatment and consultation-liaison service. In addition to these core-training requirements, interns are assigned to participate in one of the two following yearlong specialized multidisciplinary training tracks: the Pediatric Health Track or the Neuropsychology Track. The Pediatric Health Track consists of a year long rotation of consultation-liaison services, therapy, and assessment with medically compromised populations with emotional and behavioral disorders. The Neuropsychology Track consists of a year long rotation providing neuropsychology evaluations for children with neurological conditions and other medical disorders that affect brain function and cognitive status or emotional-social adjustment. Inter-disciplinary collaboration with professionals from other disciplines is a critical aspect of the internship experience to ensure effective and efficient service delivery.

Candidates that have less than the required number of hours will need to submit a plan in writing of how the remaining hours will be accrued prior to the beginning of the internship year for consideration.

Program Description

The Psychology internship program is based on the scholar-practitioner model of training and the developmental model of supervision. The goal of the program is to train adult generalists capable of working in VA settings post internship. With the approval of the Training Committee, interns are permitted to choose three 4-month rotations. Rotations may be repeated (in certain instances) so that interns can gain extended experience in areas of interest. With the approval of the Committee, long-term cases can be followed across rotations. Psychology and Psychiatry are sections of the same administrative service and have considerable interaction. Several educational opportunities are available/required on a weekly basis, including: medical grand rounds, mental health grand rounds (with psychiatry and SW), research-journal club, intern case presentations, and didactic seminars (general psychology, neuropsychology/assessment, and case conceptualization). Participation in mentorship, research, and/or program evaluation projects is strongly encouraged and time is allocated for these activities. A minimum of two hours of scheduled individual and one hour of group supervision are required on a weekly basis. Interns will also receive one hour of supervision of group supervision weekly. Interns will receive weekly supervision related to the supervision of practicum students and monthly supervision related to assessment. Students also meet with a staff mentor monthly, who serves in a non-evaluative role for the intern, but can provide guidance in navigating the internship. Interns have his/her individual or group office space, telephone, testing materials and computer monitor (email, medical records, etc). Past interns have taken post-doctoral positions and positions in a variety of agencies including VA settings, consortiums, and hospital settings.

Program Description

This internship is accredited by the American Psychological Association and adheres to the Scholar-Practitioner model of training. It is the goal of the program to help interns to become competent and knowledgeable psychologists working with a severely mentally ill adult inpatient population. Although the majority of individuals carry diagnoses of schizophrenia or some other thought disorder, individuals with diagnoses of substance-related, mood, anxiety, and/or personality disorders are also well represented. The facility provides treatment using a multidisciplinary psychiatric rehabilitation model based on a philosophy of Role Recovery. The clinical training provides each intern with a unique opportunity to gain practical experience in assessment and intervention with a diverse patient population. Goals of the program include increasing awareness of and sensitivity to the cultural, social and psychological needs of special populations while learning to adapt traditional approaches to meet these needs. Interns will be afforded the opportunity to participate in a variety of treatment modalities while receiving direct supervision and formal didactic training. Interns will have a minimum of two hours of individual supervision with licensed psychologists as well as group supervision, a weekly case conference meeting, a weekly didactic seminar and a weekly DBT consultation meeting. In addition to the more generalist training experiences, interns will participate in each of the three following rotations: (1) Forensic (2) Cognitive Assessment and (3) Specialized Behavior Planning. All interns will co-lead Dialectical Behavior Therapy (DBT), psychoeducational, and forensic groups. They will also design and implement behavior plans, conduct individual therapy, and complete cognitive, forensic, and personality assessments. Interns will also participate in multidisciplinary treatment team meetings.

Program Description

The internship program is based in a public university with a diverse student population of 41,000. Facilities, including offices, computers and the building, are superb. The training model is Mentor-Apprentice, characterized by close, collegial interaction between interns and supervisors and a developmental approach that provides for increasing autonomy over the course of the internship. Individual and group therapy is emphasized, along with a mentored experience in couples therapy. Consultation, outreach and supervision are other components of the training. The supervisory staff have varied orientations including cognitive-behavioral, psychodynamic, object-relations, gestalt, existential-humanistic, and Adlerian. The UCC staff is diverse and multi-disciplinary with a variety of interests and areas of expertise including: group therapy, treatment of anxiety and depression, personality disorders, trauma, eating disorders, gay-lesbian-transgendered issues, men's and women's issues, multi-cultural therapy, group therapy, anger and stress management, crisis intervention, consultation, and outreach. Two hours of weekly individual supervision with your primary supervisor and two weekly sessions of Group supervision. One and one-half hours of Group Supervision using observation of individual sessions with the Training Director and one hour of Supervision of Group Work with the Group Coordinator. There are also weekly seminars on topics of clinical interest. In addition, there are weekly seminars on Assessment, Diversity, Supervision, Professional Development and Group Therapy. Interns gain administrative experience through participation in UCC committees. Professional development is encouraged through financial support and leave for attendance at conferences, licensure education, paid membership in the Florida Psychological Association, legislative participation. Consultation experience is provided using a mentorship approach with current liaisons.

Program Description

The MDC Pre-doctoral Psychology Internship Program is a university-based 2,000 hour per year program which emphasizes training in school-based assessment and consultative services. Training in school and clinic-based therapeutic intervention with children and youth, clinic-based assessment of specialized child populations, and supervision of practicum level graduate students is also provided. The MDC offers six internship positions each year for students from APA approved graduate programs in psychology.

Program Description

The Tampa VAMC offers an APA-accredited internship for students desiring broad-based experiences in assessment, therapeutic intervention, and consultation in a general medical setting. We have two separate internship programs: 1.) General Internship, and 2.) Neuropsychology. During the training year, students complete four clinical rotations that meet the requirements for their particular track/program. In addition to the clinical rotations, interns are expected to maintain a caseload of two therapy cases, and attend three year-long training seminars (Assessment, Psychotherapy, and Professional Development Topics). A Neuropsychology Seminar is also required for the Neuropsychology Interns (optional for other interns). Additional didactic opportunities are available through the hospital or across the street at the University of South Florida, College of Medicine and Dept. of Psychology. Possible rotations include: Alcohol and Drug Abuse Treatment Program; Chronic Pain Rehabilitation; Community Living Center/Geropsychology; General/Geriatric Clinical Neuropsychology; Health Psychology (eating disorders, sleep disturbance, GI/liver clinic, transplants); Inpatient Psychiatry; Mental Health Clinic; Military Trauma - PTSD; Polytrauma/TBI Transitional Rehabilitation; Primary Care - Mental Health; Primary Care & Medical Psychology; Spinal Cord Injury Rehabilitation; Trauma Recovery (military sexual trauma); Traumatic Brain Injury/Rehab (clinical neuropsychology); Women's Health Center; USF Counseling Center for Human Development; Florida Diagnostic and Learning Resource System; and Tampa General Hospital (acute trauma psychology, or pediatric rehabilitation).

Program Description

The University of South Florida Counseling Center Doctoral Internship in Professional Psychology adheres to a Practitioner-Scholar Model and is designed to provide intensively supervised experiences in those activities that reflect the functioning of a clinical or counseling psychologist in a comprehensive university counseling center. This necessitates exposure to a wide variety of supervisory styles and theoretical orientations. A sequence of rotations and core training experiences provide a broad base of psychological knowledge and expertise. Additionally, the option of an external rotation at one of three medical settings is a unique and complementary training experience to the expected university counseling center activities. The general training goals of the internship reflect the development of broad-based competencies in the following foundational and function areas: Professionalism, Individual and Cultural Diversity, Ethical and Legal Practices, Reflective Practices, Diagnostic Assessment, Psychotherapeutic Interventions, Outreach and Consultation, Supervision

The intern will be an independent contractor. Prior to the start of the internship, a background check must be passed. Proof of liability insurance must be submitted at the time contract is signed.

Program Description

The Palm Beach County Youth Affairs Division provides family therapy, residential care, and psychological services to children and adolescents who are at risk for entering into the Florida Department of Juvenile Justice. The Division offers varying levels of care to families who need professional support in their efforts to develop healthy functioning children. Interns complete two rotations: six months in a residential setting and six months in a community-based, outpatient setting.

Outpatient Treatment and Prevention/Psychoeducation: Located in offices throughout the County, the Youth Service Bureau serves families with children through age 17. Families seek services for a variety of reasons, including behavioral and academic problems, parent-child relational problems, adjustment to parental separation, grief/loss, and abuse or neglect. Interns provide services utilizing a Brief Family Therapy model and run groups for adolescents involved in diversionary programs. The Education Center provides primary prevention to children, parents, and families in addition to overseeing professional development through continuing education seminars and serving as a practicum placement for graduate students. Interns facilitate parent education groups, complete psychological evaluations, and have opportunities to run community-based education presentations.

Residential Treatment: Highridge Family Center is a 60 bed, residential facility serving adolescents ages 11 to 16. Typically, families seeking services struggle with conflicted family relations, poor academics, disruptive behavior, drug experimentation, poor peer group choices, and emotional difficulties. Residents are provided alternative education while they live at the facility Monday through Friday, returning to their homes on weekends to practice newly learned skills with their families. Interns provide family, group, and individual therapy in conjunction with behavior management and therapeutic milieu activities.

Program Description

The Psychology Section is part of the Mental Health & Behavioral Science Service (MH&BS). The Psychology Section at the West Palm Beach VAMC consists of 31 full-time psychologists. Psychologists provide care in traditional mental health programs, including Mental Health, PTSD, and Substance Abuse clinics and are integrated into various other settings, including Primary Care, Blind Rehab, and Community Living Center. The Acting Chief of the MH&BS is Marie Robinson-McLaughlin, Associate Chief Nursing. Our interim Chief Psychologist is Nicole Richardson, Psy.D. Our Director of Training is Kimberly Daniel, Ph.D.

The WPB Internship Program was newly funded for the 2011-2012 training year. We are scheduled for an initial APA accreditation site visit late October, 2013. However, prior to APA accreditation, graduates of this internship program are eligible to apply for postdoctoral fellowship positions and jobs within the VA system.

The Program follows a practitioner-scholar model. Our primary goal is to expose predoctoral interns to a diversity of patient problems and many different intervention techniques as guided by relevant scientific literature. Based upon this philosophy, interns receive broad, comprehensive training in preparation for entry-level, generalist practice in professional psychology with an emphasis on evidenced-based psychotherapies. Although we believe that training in clinical and counseling psychology at the predoctoral level should be broadly based, the internship retains sufficient flexibility to allow for specialized training needs and interests of the intern to be met.

Below is a list of the six rotations that are currently available for psychology interns at the WPB VA. In addition, minor rotations are available in Evidence based psychotherapies and neuropsychology.

- Geropsychology
- Mental Health Clinic
- Post Traumatic Stress Disorder
- Primary Care Behavioral Health
- Substance Abuse Treatment Clinic
- Substance Use Disorders/Post Traumatic Stress Disorder (extended rotation)

It is the policy of American Addiction Centers to provide a safe place for its employees to work, and to promote a drug free community. The Americans with Disabilities Act of 1990, effective July 1992, prohibits discrimination against "qualified people with disabilities", and limits an employer's ability to inquire into an employee's or job applicant's medical history. It does, however, permit drug testing (before or after job offer) and alcohol testing (after job offer) and it permits employers to prohibit alcohol abuse or illegal drug use in the workplace. The act does not protect illegal substance abusers and alcoholics who cannot safely perform their jobs, but does protect those who have been rehabilitated or who are participating in supervised rehabilitation programs and not currently using drugs. American Addiction Centers does not discriminate against any person who is or has been at any time handicapped, or any unlawful

Program Description

The internship at American Addiction Centers is focused on psychological and psycho-educational assessment and evaluation, including initial clinical interviews and providing feedback sessions to families. The intern may pick up individual, group and family psychotherapy cases as needed within the agency but the majority of the clinical time spent will be in assessment. These activities will be the same at both rotations within the internship. The Singer Island facility works with an adult population and the West Palm Beach facility works with adolescents age 13-18. The training director is always available either in person or by telephone and email daily and has regular involvement at both sites.

Interns master skills including clinical interviewing, diagnosis, psychological valuation and report writing, case conceptualization and developing as a professional. Interns are expected to consult with other professionals, mentor practicum students as necessary, develop exemplary time management skills and learn community resources for referral and recommendation purposes.

Other Application Requirements
We are a law enforcement agency. As such, employment is contingent upon a security clearance and full disclosure in your application of any criminal charges, arrests or convictions. Individuals with Felony arrests may not be eligible.

Program Description

Your primary trainee will be in our 100 bed inpatient psychiatric facility. There you will evaluate and treat patients with a broad spectrum of mental illness ranging in severity from acute adjustment disorders to chronic severely mentally ill and those engaging in serious self-injury needing court ordered treatment. To broaden your understanding of the Correctional Mental Health field, you may incorporate rotations with male and female outpatient services and with a reception (intake) center. For more comprehensive information, please see our website at http://fldocjobs.com/intern/mental_health/index.html

Program Description

The Emory University Counseling and Psychological Services (CAPS) provides comprehensive mental health and preventive services for a student population which is culturally and clinically diverse. Interns gain experience in brief and longer-term individual, couples and group psychotherapy, outreach, intake assessments, consultation, supervision of practicum students and crisis intervention. Emory CAPS is a multidisciplinary setting, with staff and trainees representing Counseling Psychology, Clinical Psychology, and Clinical Social Work; there are also consultative relationships with university psychiatrists. A variety of theoretical orientations and intervention models are represented among the senior staff. The Center's model of training emphasizes three components: intern development over the course of the internship year, mentoring relationships with senior professionals, and the importance of combining practice with science (practitioner/scholar model). A balance of challenge and support is seen as central to intern personal and professional growth and development. Interns receive intensive, supportive individual and group supervision on their therapy, supervision, crisis intervention and consultation experiences. While the internship is designed to provide each intern with a balanced general foundation of knowledge and experience, there is enough flexibility to permit each individual to explore and develop particular areas of interest. The EUCC's clientele is diverse in terms of age (from late teens to 60's), race, ethnicity, religion, national origin, gender, gender identity, sexual/affective orientation, disability status, and SES. Typical presenting problems range from relationship or adjustment/developmental concerns, to depression, major mental illness, trauma/PTSD, and eating disorders. Along with their treatment and supervision experiences, interns participate in a number of didactic and experiential training seminars over the course of the internship year.

Program Description

We have 4 general internship (3 general and 1 trauma track) slots and 4 neuropsychology slots available. The general internship is based in a public city hospital, which is the primary teaching and training hospital for Emory University School of Medicine. The general track consists of 3 rotations; adult, child, and elective. Training is available in adult inpatient units, adult psychiatric emergency services, adult and child/adolescent outpatient intervention services, adult and child/adolescent outpatient assessment services, adult and child/adolescent medical services, and a variety of specialized elective services. The program is a generalist one based on the scientist practitioner model of training. The trauma track consists of a year long experience working with women who have experienced domestic violence and have made a suicide attempt (Grady Nia Project). The Grady Nia Project is funded by the National Institutes of Mental Health and the Centers for Disease Control and Prevention and focuses on the assessment and treatment of abused, suicidal, low-income African American women. The trauma track intern will work on the NIA team providing assessment, individual psychotherapy, group psychotherapy, and family therapy as appropriate to women who have been referred to the project. Additionally there will be a minor rotations in selected clinical experiences noted above in adult, child, and elective. The neuropsychology focus program has 2 major rotations on 3 neuropsychology services, adult, child and geriatric with 50% time in neuropsychology assessment of patients with acquired brain injury, stroke, epilepsy, neoplasm, and other neurological conditions. All interns spend 6 months on the adult rehabilitation service and either 6 months on the child neuropsychology service, or 6 months on the geriatric neuropsychology service. In addition to these three major diagnostic services in neuropsychology, interns complete three minor treatment rotations in psychotherapeutic and behavioral health interventions in inpatient and/or outpatient settings and in either an adult or child/adolescent psychiatric setting.

Program Description

The GSU Counseling & Testing Center is located on an evolving urban and multiculturally diverse campus. Training staff hold a variety of theoretical orientations, including Interpersonal, Psychodynamic, Cog. Behavioral, Multicultural, and Feminist. There is an emphasis on exploring dimensions of diversity (race, ethnicity, gender, SES, sexual/gender identity, spirituality, level of ability, and age) on one's experience and development (for clients as well as trainees). Interns provide individual, couples, and group psychotherapy, conduct intakes/clinical interviews, engage in outreach and consultation, participate in crisis intervention. Training seminars/group supervisions are held on a weekly basis. Professional development and ethics are incorporated throughout training, both in individual supervision and seminars. Additionally, Interns may have the opportunity to help in the planning and/or implementing of the Biennial GSU Cultural Competency Conference as part of their professional development.

Program Description

Marcus Autism Center provides assessment and treatment services for a variety of pediatric populations and their families with a focus on children with some type of developmental disability. We are committed to celebrating human diversity, serving diverse patient populations, and welcoming diverse trainees and staff. Several clinics contribute to Internship training that follows the scientist-practitioner model via empirically supported practice in 2 tracks emphasizing (a) applied behavior analysis & other treatments, or (b) diagnostic assessment of autism and other developmental disabilities. Clinical activities conform to established ethical guidelines of the American Psychological Association. The Program strives to provide a model of applied behavioral science by developing and evaluating the application of behavioral principles and technology to service, training, and research programs with a philosophy that behavioral science forms the basis for effective and ethical clinical services. Accordingly, the internship promotes data-based diagnostic and treatment procedures that are consistent with basic principles of learning and development as embodied in the behavioral research literature. Applicants whose backgrounds emphasize psychodynamic or humanistic theories are not a good fit for this program. The goals of our program is to prepare interns to function in a variety of settings (service, training, research, advocacy), including within an interdisciplinary team. Training occurs through supervised experiences in outpatient and day treatment programs, didactic instruction by the psychology faculty and related disciplines and attendance at colloquia and Grand Rounds. Active involvement in research is required, and a strong research background is essential to successful participation in the internship. Interns completing our program are well qualified to enter clinical, community or academic settings. For more information, please, visit <http://www.marcus.org/default.aspx?id=23>.

Program Description

The Georgia Tech Counseling Center offered a pre-doctoral internship for the first time beginning in 2007-2008. The internship offers experience in providing direct services within a university counseling center setting and among a culturally diverse campus population. Interns will provide individual, couples and group counseling to university students. They will also be provided with two hours of individual supervision per week, and one hour of group supervision per week as well as one hour of assessment supervision per week (group format). Interns will participate in weekly training seminars that include major theoretical orientations for treatment, group therapy, couples therapy, crisis management, substance abuse, special populations and multicultural counseling. Interns have the opportunity to conduct psycho educational assessments. Interns will also participate in a weekly case conference discussion with senior staff, and will participate in the weekly case assignment meeting. Interns will have the opportunity to co-facilitate outreach workshops with senior staff, and will be supported in developing their own outreach workshops. Interns will also have the opportunity to co-facilitate weekly groups, both interpersonal therapy groups and didactic seminars on depression, anxiety, and relationships. The Counseling Center is the primary provider of mental health services on campus, and maintains close working alliances with other departments such as the Student Health Center, Health Promotions, and the Department of Housing. Georgia Tech is located in the heart of Atlanta on a beautiful campus characterized by trees and green space. The Institute is internationally recognized as a premier research university, and consistently ranks among the top ten of public universities in the country. The student body consists of approximately 13,500 undergraduate and 6,500 graduate students. There is a large residential and international student population.

Program Description

The Medical College of Georgia (MCG) and the Charlie Norwood Veterans Affairs Medical Center (VAMC) are organized as partners in offering a 12-month, full-time Residency (Internship) in Clinical Psychology. The program begins in early July and carries an annual stipend of \$23,974. We currently fund nine Residents. The Residency combines a solid grounding in clinical skills with access to a wide range of mental health and medical settings through which a Resident can develop general clinical-counseling skill as well as special expertise. An "Empirical Clinician" training model guides its focus on teaching practice skills that are empirically supported. Our hospitals and clinics are large regional treatment and training centers with more than 1000 combined inpatient beds and a multitude of specialty treatment programs and clinics. Our program partners with East Central Georgia Regional Hospital (ECRH) a state funded psychiatric hospital that provides care for individuals with serious and chronic mental health disorders. The Augusta Campus of ECRH consists of three primary inpatient units: Adult Mental Health, General Mental Health, and Forensics. In addition to the generalist training opportunities available, emphasis training is provided through the selection of one of five tracks: Child and Family, Community Psychology, Health Behavior, Medical Psychology -HIV/AIDS, and Psychology of Women. Within the Health Behavior Track options include specialization in Trauma/PTSD and Medical Psychology. At the residency facilities Residents work in close collaboration with primary care physicians, psychiatrists and other physician specialists, and other allied health professionals to develop skills in providing interdisciplinary health care. Finally, an emphasis is placed on developing skills relevant to providing care to underserved populations - children, individuals living with HIV/AIDS, and individuals from underserved rural communities.

Program Description

We emphasize a general practitioner model with a balance of therapy and rotation experiences. It is expected that the doctoral dissertation (if required) be completed prior to the end of internship. For the 2013/2014 Training Year, interns will follow a sequence of training rotations in the following areas: Adult Assessment; Neuropsychology; Health Psychology; Military Psychology; Inpatient; Warrior Transition Unit. Therapy patients are seen throughout the year. Interns will also participate in crisis intervention, triage, evenings on-call, consultation and military specific training. Please access website for current information. The program strongly encourages applications from individuals from diverse backgrounds.

Program Description

The Carroll County School System has been an APPIC member since 2003. Carroll County Schools is a public school system with a diverse student population (ages 3-21). The internship provides major experiences in assessment, group and individual counseling, consultation, behavioral & academic intervention and minor experience in crisis intervention and in-service training. Interns learn how to effectively consult with school staff, conduct functional behavioral assessments, write behavior intervention plans, and assist teachers with planning individual educational plans for students. A range of experiences is available, including preschool work and assessment of low-incidence disorders such as severe mental retardation, autism, health impairments, etc. Supervision is provided by two or more licensed psychologists, each with experience practicing in school settings. Interns may spend one day each week within a psychoeducational facility for students with severe emotional and behavioral disorders as well as autism. Interns work within a multidisciplinary team with other practitioners such as psychologists, teachers, counselors, speech/language pathologists, occupational therapists, psychiatrists, etc. Experience at an alternative school setting for students with significant behavioral/conduct related issues may also be available. Applicants are encouraged to carefully consider their specific training goals so that the internship experience can be tailored to their area(s) of needed growth and interest. As the Carroll County School System may also serve as a training site for bachelors, masters, and specialist level practicum students and psychologists-in-training, opportunities are provided for collegial growth and shared didactic experiences. APPIC interns are highly regarded by school staff, parents, and other members of the multidisciplinary team. Experiences are often rewarding, enriching, and meaningful for trainees and supervisors.

Program Description

The program encourages interns to develop a solid, general set of clinical skills. These skills include assessment, psychodiagnosis, individual and group intervention skills, consultation, and assumption of a professional role. Emphasis is placed on learning the most current philosophical and technical approaches backed by empirical research and current professional standards. All training rotations provide ample opportunities for direct clinical experience. All supervisors provide individualized evaluation and feedback on clinical skills and the resident's professional growth as it occurs within a clinical setting. Please see our online brochure at <http://www.psychologytraining.va.gov/atlanta/> for more details.

Program Description

Our 2000-hour internship program includes opportunities for individual and group counseling, crisis intervention, consultation, outreach, research, and participation in campus-wide committees. The following optional rotations are available and allow interns to tailor their experiences to meet their future career goals/ interests: LD/ADD Assessment, LGBTQ Specialty, Outreach Specialty, Research Specialty, Group Therapy Specialty and Sexual Assault Specialty. Currently in our fourth year, we are an APPIC-member internship program. Our goal is to become accredited by the American Psychological Association. The Counseling and Career Development Center is accredited by the International Association of Counseling Services, and is a member of the Association of Counseling Center Training Agencies (ACCTA). Our training staff adhere to the ethical principles of the American Psychological Association, and are committed to meeting the needs of all individuals regardless of culture, race, gender, ability, or sexual orientation. Georgia Southern University, classified as a doctoral/research institution by the Carnegie Foundation for the Advancement of Teaching, is a member of the University System of Georgia. The University is a residential campus of approximately 20,000 students and a premier choice for the state's HOPE Scholars. Students representing almost every U.S. state and 86 nations bring a diverse spectrum of backgrounds, interests and talents to the University community. Rated by Kiplinger Personal Finance as one of the Top 100 Best Values in Public Colleges and Universities, Georgia Southern strives to keep the personalized attention and feel of a small college. Located in Statesboro, a safe and classic Main Street community of approximately 30,000 residents an hour northwest of Savannah, Hilton Head Island, and the Atlantic coast, Georgia Southern provides enriching opportunities for people of all ages while also maintaining a reasonable cost-of-living.

Program Description

The internship will accept a maximum of 6 military interns for the 2013-2014 training year. The internship is a 12 months long practitioner-scholar program. No civilian intern positions. Military interns begin in October following the Basic Officer Leadership Course. The goal of the program is to establish solid generalist skills as a clinical psychologist working with military and civilian populations in outpatient and primary care settings. All interns are required to complete a four month Adult Assessment and Intervention Rotation as well as 1 day a week all year in primary care. Military complete primary care through Tripler while civilians do so through rural Community Health Centers. Interns negotiate with faculty in choosing two training opportunities from among the following: Behavioral Medicine, Child and Family Psychology, and Neuropsychology. There is an emphasis on conducting a full range of psychological testing and assessment. Interns receive training and experience in cultural diversity. Interns are trained to be future leaders in both military and civilian psychology, with applied opportunities to lead within the internship. The internship provides a comprehensive professional educational program, to include a number of 2-day workshops conducted by nationally known psychologists. All interns are strongly encouraged to complete their dissertations/CRPs by the end of the internship, with extensive hospital library research resources available to provide assistance. Interns have the opportunity to interact with a diverse military and civilian internship faculty, post-doctoral fellows, and graduate practicum students. Please refer to our website for more information about our program and about the application process. www.tamc.amedd.army.mil/residency/mchc-ph/cprp.htm

Program Description

The CSDC internship embraces a philosophy of experiential learning and provides practitioner-scholar training. Emphases of the training program include: (a) facilitating the psychological development of university students; (b) acquiring multicultural awareness, knowledge, and skills within a diverse and international university community; and (c) integrating ideas and strategies from several different theories of psychotherapy. Interns receive training and are expected to develop competence in nine areas: (1) Professional Conduct and Development; (2) Ethical Conduct; (3) Multicultural Competence; (4) Psychological Assessment; (5) Individual Psychotherapy; (6) Career Counseling; (7) Crisis Intervention; (8) Group Counseling; and (9) Clinical Supervision. Full-Time status is guaranteed 1900 hours. However all trainees have been able to clock 2000 hours.

Program Description

Please see www.psychologytraining.va.gov/ and select Hawaii under Training Programs. Our five psychology interns work in a variety of clinical rotations offered by psychologists throughout the Pacific Islands Health Care System (PIHCS). Rotations are available in an outpatient mental health clinic, a psychiatric evaluation team, a traumatic stress recovery program, a substance abuse treatment team, a mental health rehabilitation program, an integrated mental health in primary care team, a traditional-alternative-complementary healing program, a geriatric services program, a neuropsychology service, a residential PTSD treatment program, and a military sexual trauma provider network. Interns develop individualized training plans gaining experience in from three to six different clinical rotations with individual supervision in each rotation from the psychologist responsible for that service. The training program includes five psychology postdoctoral resident positions (2 in PTSD with the National Center for PTSD/VA PIHCS, 1 Psychosocial Rehab at VA PIHCS, 1 in Integrated Care at VA PIHCS, and 1 in Military Sexual Trauma & Women's Health at VA PIHCS). All five of the intern positions are designated as Generalist positions (Program Code 124411). Our training program has a generalist, practitioner-scholar (Vail) orientation based in diverse clinical experiences with a focus on evidence-based practice and a sensitivity to ethnic, cultural, and individual differences. We are seeking bright, conscientious, personable, diverse, and well-qualified applicants with sound clinical practicum training in psychological assessment, individual and group therapy with adults, and ability to function independently with initiative, flexibility, and maturity under appropriate supervision.

Program Description

I Ola Lahui provides training in effective, culturally-minded interventions for use in Hawaii's rural and medically underserved communities. The goal of the program is to increase Hawaii's capacity to address the growing behavioral health needs through training in traditional mental health care, chronic disease management, and psychopharmacology. The program offers clinical and research training using the scientist practitioner model where interns use research to inform clinical practice and conduct research on topics related to their clinical settings. Interns rotate through a variety of clinical settings on 3 islands to gain experience in 4 core clinical areas: Primary Care/Integrated Behavioral Health, Behavioral Medicine and Health Psychology, Adult Outpatient, and Child/Adolescent. Didactic instruction and supervision are provided to support interns training in topics including cultural competence, cognitive behavior therapy, motivational interviewing, and psychopharmacology. Interns receive clinical supervision along with weekly professional development and research supervision. Interns are encouraged to engage in program development and research projects as part of their training. There are 2 tracks within the internship program. IOL Generalist track has 2 positions (Program Code 205911) and is designated as a generalist position. HRSA Rural Hlth/Generalist Track (Program Code 205912) has 2 positions and is designated as a generalist position with emphasis in rural/underserved health care. Preference for all tracks is given to applicants who have demonstrated interest and experience in provision of services to Native Hawaiian and other medically underserved communities. Native Hawaiian Health Scholarship recipients are encouraged to apply for the program. For the HRSA track, preference is given to University of Hawaii Clinical Studies students. Post doctoral fellowship positions are available and interns are encouraged to apply.

Program Description

The Waianae Coast Comprehensive Health Center serves the federally designated, medically underserved communities on the Waianae coast and surrounding communities in the Leeward and Central regions of Oahu. At the WCCHC campus, integrative medicine is practiced to include primary care, pediatrics, obstetrics, chronic pain management, dentistry, preventative health, a free standing 24-hour emergency department, Native Hawaiian Healing, and a fully integrated behavioral health program that includes psychiatry, psychology, primary care, health psychology, and substance abuse treatment. The population served is culturally diverse, predominantly of Native Hawaiian ancestry, and many have traditional cultural ideologies. Interns will provide assessment and treatment for a wide range of presenting concerns including acute, chronic, severe, and complex psychological, organic, and/or substance related conditions. All interns will receive generalist training and will participate in the Adult Outpatient Rotation, Child and Family Rotation, Assessment Rotation, and Research and Program Development Rotation. They also have the opportunity to request a minimum of 1 and up to 2 of the following rotations: Crisis Intervention and Outpatient Mental Health Rotation, Womens Health Rotation, Kapolei Rotation, and Pediatric Rotation. The Biological Bases of Severe Psychopathology Rotation is currently unavailable, but may become available to interns in the future. Interns receive weekly didactics on various topics and participate in a weekly seminar on psychopharmacology and the biological etiologies of mental illness. They will have the opportunity to provide supervision to a practicum student in professional development and attend a supervision seminar. Applicants with experience or interest in working with the Native Hawaiian population and/or medically underserved populations are encouraged to apply.

Program Description

The Boise VAMC Psychology Internship Program is based on the Practitioner-Scholar model and is committed to training professional psychologists in the intervention and assessment of veterans and veteran families with varying emotional, medical and neurological conditions and applying current scientific research in the practice of psychology. As such, the Clinical Training Committee's (CTC) goals include 1) training well rounded generalists with experience in a variety of identifiable populations (i.e., rural, women, and ethnically and geographically diverse groups) and a range of problems; 2) training future clinicians to inform their practices with extant scientific research, as well as develop their abilities to think critically in addressing areas in which clinical research is limited; 3) encouraging interns to become both consumers of and participants in research; and 4) facilitating overall professional development. Additional program information is available in our training brochure.

Southeastern Idaho Psychology Internship Consortium consists of Pocatello Family Medicine, the principal outpatient teaching clinic of the family medicine residency program at Idaho State University; Allies Family Solutions, a mental health clinic offering a range of psychological and psycho-social rehabilitation services to children, families, couples, and others; and State Hospital South, a 136 bed psychiatric hospital serving Idaho residents 12 years of age through adulthood. The internship program is a 12 month, 2000 hour training program in which consortium interns have the opportunity to provide services in each of these settings. Each of the three interns performs a major rotation consisting of two days per week at a particular site for 12 months along with two minor rotations consisting of two days per week for six months at each of the alternate sites. One day per week is devoted to two hours of group supervision, one hour of didactic teaching, and 1.5 hours of an exercise called multidisciplinary psychiatry rounds. The rest of the day is designated as release time for dissertation work.

Program Description

The Kane County Diagnostic Center is a Department of the Sixteenth Judicial Circuit's Court Services. KCDC provides psychological services to juvenile delinquents and adult offenders. These persons may be at any stage of involvement in the criminal justice system from pre-trial to post-sentencing. KCDC is the designated psychology department for the Court. Direct services to offenders include diagnostic evaluation, crisis intervention and individual, group and family therapy. Interns carry a therapy caseload of 10-12 active therapy clients per week. KCDC provides the Court with expert testimony and consultation and training for Probation and Correctional staff. KCDC also assists the Merit Commission by conducting psychological screenings for Sheriff's Deputy, Correctional Officer, 911 Dispatch and Court Security applicants. Diagnostic evaluations consist of full batteries and consultation reports. The average number of assessments completed during internship is 60. Assessments consist of: risk assessments; sex offender evaluations; drug and alcohol assessments; fitness to stand trial; pre-employment screenings for sheriff deputies, correctional officers, 911 dispatchers and court security guards; treatment recommendations; domestic violence evaluations. Please note that we do not work with victims, only the offenders.

Program Description

The practitioner-scholar model was used in designing our curriculum and training experience. Interns engage in all the activities of a licensed psychologist employed in a university counseling center setting, but to a lesser extent. The program has nine basic competency areas: Legal and Ethical Issues, Professional Behavior, Individual Psychotherapy, Group Therapy, Clinical Assessment, Community Intervention, Social Justice/Diversity, Providing Supervision, and Receiving Supervision. Interns spend approximately twenty percent of their time in supervision and training as a means to support the learning process. The program has training seminars in Provision of Supervision, Community Intervention, Social Justice/Diversity, Clinical and Professional Issues, and Clinical Assessment. Interns meet for three hours per week for individual supervision to support their individual psychotherapy work. No single theoretical orientation characterizes us; we are open to a variety of approaches. Our staff is experienced in both brief and long-term therapy, and we strive to model integrative eclecticism and the application of the practitioner-scholar model to a practice setting. Interns are able to see up to 33% of their clinical caseload in long-term therapy (over 12 sessions). Interns declare an area of concentration during each semester. Areas of concentration can be in any of the following areas: Individual Therapy, Couples Therapy, the Dialectical Behavior Therapy Program, the Eating Disorder Outpatient Program, Alcohol and Other Drugs, Community Intervention, Social Justice/Diversity, Administration/Research.

Program Description

To equip and prepare future psychologists to work competently with underserved populations (children/ adolescents, racial/ethnic minorities, low income individuals, older adults, etc.) from a distinctly Christian perspective. This is accomplished through: EXPERIENCE working with many different underserved persons in a variety of clinical settings (urban, suburban); EXPOSURE to various therapeutic modalities geared to address the specific challenges faced by underserved groups; EXEMPLARS in the profession who share their passion for this work through supervision, mentoring and professional development; ENRICHED service provision through collaborative research projects geared towards cultivating enhanced perspectives in work with marginalized groups; EXTENDING this enriched perspective to foster a greater number of professionals to work competently with the underserved; and in all things, EXEMPLIFYING Jesus Christ in work with these persons. CACTC has been accredited with APA since 2002. In 2007, CACTC was reaccredited for an additional 7 years (next site visit: 2014). CACTCPartners: Cornerstone Counseling Center of Chicago (CCCcC)-Chicago, Lawndale Christian Health Center (LCHC) -Chicago, Outreach Community Ministries (OCM) -Wheaton/Carol Stream, and Wheaton College Graduate School - Dept of Psychology.
Rotations: Interns located at primary site 4 days/wk, secondary site 1 day/wk. Primary and Secondary Rotations are available at all sites (except Wheaton). **Website:** www.cactc.org. Spanish speaking interns would have many opportunities to use/further develop their Spanish skills in a therapeutic context.

Program Description

At the broadest level, our training program is primarily driven by an Identity Development Model. We conceptualize interns as emerging professionals in an ongoing process of identity development with the ultimate goal of a clear and articulated identity as a Psychologist, also integrating various other dimensions of identity (e.g., gender, culture, race, etc.). We see interns moving through developmental stages and tasks both in a larger lifelong process and in the process contained within the internship year. Most identity models emphasize a progression of self-awareness and other-awareness over time with critical junctures and challenges, which result in a movement to another stage. Ultimately, identity development moves toward increasing complexity in worldview. Within the identity development model that guides us, we are further directed by the Local Clinical Scientist model posited by Trierweiler and Stricker (1998). These authors emphasize three broad areas of skills: attitude and judgment, critical thinking, and methodological. They also conceptualize their model as an identity model. In their terms, the focal point of the model is the image of the professional standing alone amid an ambiguous reality that must be explored, understood, and influenced positively by professional action. The development of critical judgment skills is vital in the life of a Psychologist and the local clinical scientist model recognizes this. Our Training Objectives are to provide training and experience in: planning and delivering high quality direct clinical services to clients, outreach and consultation services and activities associated with university counseling centers, forming an integrated professional identity as knowledgeable, skilled, and ethical psychologists.

Program Description

The Adler Community Health Internship program is exclusively affiliated with the Adler School, i.e., only Adler School students are eligible. The program offers 8 full-time positions for Adler students. The primary objective of the program is to prepare interns for entry into the field of professional psychology as socially responsible practitioners. The Adler Internship program provides a well rounded diverse training experience with rotations at rehabilitative/half way houses for formerly incarcerated adults, prison adult work release programs, a community medical center serving homeless and HIV populations, a child, adolescent and young adult program offered at an elementary school, a traditional high school, an alternative high school, an associate degree granting college, and a community mental health program serving persons with severe and persistent mental illness. Training consists primarily of individual and group therapy, with opportunity to do some couples and family therapy. Interns will also provide consultations and psychoeducational programs. Interns will be exposed to individually and culturally diverse populations in an urban setting. Training in various types of psychological assessments include neuropsychological screenings, cognitive, and socio-emotional assessments. Each intern will carry a caseload of 15-20 therapy clients and is expected to complete a minimum of 3 assessment batteries over the course of the training year. All interns are assigned two licensed supervisors who they see weekly. The program offers interns a range of supervisors with varying backgrounds and orientations including Adlerian, Cognitive Behavioral, Psychodynamic, Constructivist, and Humanistic. In addition to providing services to clients, interns are involved in weekly meetings including Director's Meeting, Triage (case disposition) and seminars. Interns are taught to develop supervisory/management skills by managing and training externs (i.e., practicum students). Interns are allowed to augment their training through coursework at the Adler School (at no cost).

Program Description

The internship program at Lurie Children's provides a broad range of experiences in clinical child and pediatric psychology through a year-long outpatient experience and three four-month rotations in consultation-liaison, partial hospitalization, and the psychiatric inpatient unit. Assessment experiences are divided into three rotations as well, including one developmental assessment rotation and two pediatric neuropsychology rotations. The Psychology staff at Lurie Children's is committed to training broadly in behavioral, cognitive-behavioral, and family therapy approaches to treatment with an emphasis on best practices and empirically supported treatments. Involvement in clinically-based research during internship is optional. The primary training goal at Lurie Children's is to train students in both the "art" and "science" of clinical child psychology. At the end of internship successful students will be competent to move into post-doctoral or staff positions in academic medical settings, as well as other outpatient mental health settings.

Program Description

La Rabida offers three full-time internships each year. The internship begins on July 1 and ends on June 30. The internship is designed to meet the growing need for psychologists to work in health care. The program offers a challenging opportunity to develop clinical skills of assessment, treatment, and consultation within three broad areas: pediatric, general child-clinical, and child maltreatment. Training is based on an integrative practitioner model that combines experiential and didactic learning with a solid commitment to providing superior supervision. Theoretical approaches represented among the training staff include cognitive-behavioral, psychodynamic, trauma-focused and family systems. Training is done within a multidisciplinary setting with an understanding of the cultural issues and a respect for the diverse backgrounds of the population we serve.

Program Description

The Adler Juvenile Justice Internship Program involves working with incarcerated adolescent males at the Illinois Youth Center at St. Charles, Illinois. The Adler School itself is located in downtown Chicago but the internship site is approximately 40 miles west of downtown Chicago. Interns also are entitled to audit a course for free on their own time. Interns are sent to paid, offsite professional trainings each year. The program uses a practitioner training model; activities include assessment, group and individual therapy, crisis assessment, consulting, and intake and diagnostic interviewing. Each intern receives a minimum of 2 hours of individual supervision per week. Additionally, group supervision and didactic training occurs every week on grounds. Additional training occurs offsite in a monthly training day at the Adler School campus. Familiarity with Adlerian/Individual Psychology is not required of applicants but interns must demonstrate values consistent with social responsibility, social justice and commitment to working with underserved populations. A post-doctoral position also exists within the Adler Prison Program as well as assessment and advanced practicum positions. Prior correctional or forensic experience is helpful but is not required. Strong foundation in child and adolescent development, assessment and treatment is preferred. Note: This program was part of the Adler School of Professional Psychology Psychological Services Center (program #254) from 1994 until mid-2002. Please refer to program #254 statistics for information about prior years. Intern statistics below reflect the recent intern groups within the Adler Prison Programs. and research and the ability to apply that knowledge and understanding to a variety of clinical situations. The program has a strong psychodynamic influence. The emphasis of the training program is to provide training in core therapeutic skills essential to the practice of clinical psychology; to teach intervention strategies/skills grounded in theory and research; to promote self-examination as a way to understand one's impact on the therapeutic process and the alliance; and to foster the ability to critically examine the efficacy of interventions. The program encourages interns to continually reflect upon the complex relationship among psychological theory, practice, and individual differences, while paying close attention to their own reactions to the client in order to be a self-reflective clinician.

Program Description

The Internship Program in Clinical Psychology at Northwestern University's Feinberg School of Medicine is designed to train the next generation of leaders in clinical psychology. We develop professional psychologists who are clinically perceptive and technically skilled, and who demonstrate a comprehensive and critically minded knowledge of psychological theory, treatment, and applied research. Our internship program is based on a scientist-practitioner model. Training is multidisciplinary, scholarly, and pluralistic. It is designed for individuals who wish to pursue careers in clinical practice, teaching, and research, primarily in academic and medical center settings. Trainees are immersed in clinical programs that emphasize expert diagnosis, early intervention, continuity of care, and access to a broad range of evidence-based treatments; an educational curriculum that is programmatic, integrative, and individualized; and research programs of national standing. Opportunities for generalist training during the internship year abound as the patient population served is demographically, socioeconomically, and diagnostically diverse. Trainees acquire the theoretical, empirical, and methodological knowledge necessary to treat a wide range of complex clinical problems within a multidisciplinary setting. Steeped in a rich tradition of training, and supported by wealth of clinical and scholarly resources, Northwestern, offers trainees an exceptional environment to complete the final preparations for their professional careers.

Our program is organized in two tracks—1) Psychopathology & Psychotherapy and 2) LGBT Health. Each track accepts three interns per year. Interns—must identify their preferred track at the time of application. Interns in the Psychopathology and Psychotherapy Track receive broad and intensive generalist training in assessment, diagnosis, psychological testing, case formulation, consultation, and individual and group psychotherapy with outpatient adults. They receive training in several evidence-based treatments, including CBT, DBT, CBT for Psychosis, CBASP, and Mindfulness-Based CBT/ACT. They also receive training in psychodynamic psychotherapy. Training is provided through the Stone Mental Health Center, a CMHC associated with Northwestern Memorial Hospital, and several multidisciplinary, community-based clinics. Interns in our LGBT Health Track also receive broad and intensive generalist training in assessment, diagnosis, psychological testing, case formulation, consultation, and individual and group psychotherapy. Rotations are completed at the Center on Halsted, a clinic serving Chicago's LGBT community, the Infectious Diseases/HIV Clinic of Northwestern Memorial Hospital, and our Department's Consultation/Liaison Service. LGBT Health interns conduct clinical research with faculty in the Department of Medical Social Sciences (MSS) at Northwestern. All interns participate in a range of didactic seminars, workshops, and case conferences. Participation in research is strongly encouraged and supported. Interns work closely with a research mentor who shares their interests, and are encouraged to apply for post-doctoral fellowship positions with our department. For further information, we invite you to visit our website or to contact us directly.

Program Description

Interns work with the entire age span but may concentrate on work with children, adolescents or adults. The outpatient clinic serves a very diverse population with regard to race, ethnicity, and sexual orientation. There is no dominant theoretical framework. Cognitive, Behavioral, Dynamic, Systems, and Developmental Perspectives are well-represented. The program has a strong team of bilingual (English/Spanish) supervisors and staff. There are opportunities for longer term therapy but outpatient clinics typically adhere to a 20-session model with guidelines for extended therapy. The program is primarily outpatient and community focused with opportunities to work with an extremely diverse psychiatric population as well as medical populations. Extensive experience in the treatment modalities of individual, family, couples and group therapies. To obtain program information and application materials on line, please refer to the following website: <http://www.advocatehealth.com/immc/body.cfm?id=170> Current application information will be available by August 10.

Program Description

Psychology Pre-doctoral Internship (Residency), Rush University Medical Center. Applicants apply to and train in one of the three basic training emphases (tracks) of the program: Health Psychology (4 positions), Child/Adolescent Psychology (2 positions), or Neuropsychology (3 positions). Across tracks, there is a common focus on the roles and functions of clinical psychologists in a general medical setting and a common emphasis on a broad understanding of the life adaptation of children and adults. Each track provides both didactic training and clinical experience aimed at developing professional competence and achieving the goals of training described earlier. This area of emphasis training model dovetails with our training philosophy which highlights both breadth and depth of knowledge. Cross-track and elective experiences can be incorporated into required training. For example, neuropsychology track residents may work with a pediatric neuropsychologist in the child and adolescent service. Health and child track residents can choose electives in the neuropsychology service. In addition, all supervisors are available to each resident for consultation.

Program Description

The internship is designed to provide trainees with opportunities to be engaged actively in the integration of clinical research and practice. We adhere to the principal that psychological practice is based on the science of psychology, which, in turn, is influenced by the professional practice of psychology. There are separate tracks in child and adult, although interns can select training opportunities across tracks. The internship offers a unique and rich training experience with children, adolescents, and adults, special populations, and individuals with cognitive and medical diagnoses. Interns may also work in schools, community agencies, or in the UIC hospital. Trainees gain practical and theoretical understanding of diagnosis, assessment, and intervention of a wide range of mental health concerns within a multidisciplinary urban mental health setting with a variety of patients of multi-ethnic origin. UIC receives referrals from many agencies and schools as well as departments within the University of Illinois Medical School and UIC campus. Individuals are also self-referred for clinical services. As such, we serve a diverse population. Many of our clients are from disadvantaged backgrounds, and many come to us with multiple problems. Our clinical services and clinical research grants provide the means by which we fulfill our primary responsibility for services training and research. The main program goals include: Intensive training in the assessment, diagnosis, and treatment of mental disorders within the scientist-practitioner model, in which clinical practice and research are integrated. Training culturally sensitive psychologists by providing broad clinical experience across a variety of settings and populations with specific attention to issues related to individual differences and cultural diversity. Preparing interns for clinical research careers in academic, mental health, and medical settings, in the public or private sector.

Program Description

This internship is oriented toward individuals seeking to identify primarily as clinical scientists in their careers. Empirically based clinical training and research are emphasized equally for all interns across the four training tracks. We will be recruiting one intern for each of our four tracks: Adult Neuropsychology, Child Psychology/Pediatric Neuropsychology, Eating Disorders, and Adult/Health Psychology. The Adult/Health Psychology track focuses on practice and research, with emphasis on empirically supported assessment and interventions within research-affiliated clinics. CBT for Anxiety and Mood, Substance Abuse, Psycho-oncology, Consultation/Liaison and Sleep are emphasized. The Eating Disorders track emphasizes empirically validated approaches to treating adolescents and adults with Anorexia Nervosa, Bulimia, and Obesity. The Adult Neuropsychology track follows Houston guidelines. Interns complete rotations under the supervision of two adult clinical neuropsychologists. Rotations include Adult Neuropsychology with a medical neuropsychology focus and the Memory Disorders Clinic. Interns may also choose a research rotation or a rotation from the other adult oriented tracks. The Child Psychology/Pediatric Neuropsychology track is oriented to individuals whose primary interests span Pediatric Neuropsychology, Developmental Disorders, and Pediatric Consultation/Liaison. Research and clinical training opportunities are available across tracks. All interns carry a required number of individual psychotherapy cases and are supervised by program faculty in their clinical work. Tracks have required educational experiences, including seminars, attendance at departmental grand rounds, and participation in focused research under a faculty mentor. Interested candidates should view our website for further information. The brochure is updated annually by September 1 for the upcoming training year. <http://psychiatry.uchicago.edu/page/message-program-director>

Program Description

Interns provide individual, group, and couples therapy as well as intakes, supervision for doctoral externs, crisis consultation for the residence halls, and outreach programs. Seminars include multicultural counseling, couples therapy, supervision of supervision, assessment (utilizing the clinical interview as the main assessment tool), psychiatry and college mental health, and a seminar on various professional issues. Rotations are available in community service, Dialectical Behavior Therapy, paraprofessional training (classroom teaching and/or supervision of volunteers on our Chicago-area crisis hotline), group therapy, and/or outreach. Interns receive a minimum of four hours of individual supervision per week. Our student body is extremely diverse with regard to race, ethnicity, age, SES, presenting concerns, and sexual orientation. There is particular emphasis placed upon a multicultural perspective in all aspects of clinical and professional work. Supervisors have a range of theoretical orientations, including psychodynamic, relational, feminist, multicultural, and CBT. We have a 20 session individual therapy model (unlimited for group therapy) with the opportunity for interns to extend services for some clients up to the entire training year.

Program Description

Gateway Foundation is offering 11 internships at 3 sites. The interns provide individual and group psychotherapy, mental health assessments, and some biofeedback treatment. The 4 interns at Lake Villa and the 4 interns at our Chicago West site work with clients who are in residential substance abuse programs. The 3 interns at our Aurora site will see outpatient C&A clients who may or may not have substance use issues, and/or clients in residential substance abuse treatment. The 4 Lake Villa interns do four three-month clinical rotations: Adolescent and young adult males, Men, Women and Admissions. Chicago West has four specialized year-long positions: adolescent boys, Adult Men, Adult Women, or the Dual Diagnosis program. Primary substance abuse treatment is provided by Gateway's substance abuse counselors, who refer some of their clients to the psychology department for psychotherapy. Supervisors' theoretical approaches cover a broad range, including humanistic-existential, psychodynamic, CBT and ACT. Training in Motivational Interviewing and other Evidence-Based Clinical practices will also be provided, and there will be opportunities to learn and practice biofeedback. Interns are supervised by Primary Supervisor Michael Nagelbach at Lake Villa, John Fusco at Chicago West, and Greg Tierney at our Aurora site. Philip Welches is a Second Primary Supervisor.

Program Description

There are seven sites within the LMIC for 2014-15. 1) Streamwood Behavioral Health Center, which serves children and adolescents in an inpatient psychiatric hospital. 2) MacNeal School, which is a therapeutic day school. 3) Argosy University, Chicago Psychological Services Center, which will serve all Chicagoland EDMC students, except those in the clinical psychology graduate program. 4) Smart Love Family Services, which treats children and families from an intrapsychic humanistic orientation. 5) Ada S. McKinley Community Services, which serves primarily children and adolescents in the community - therapy takes place primarily in the homes or school setting. They have 2 internship slots. 6) Chicago Institute for Psychoanalysis Adult Psychotherapy Clinic - intensive training in psychoanalytic theory working with diverse adults. 7) Hope Counseling Center - Located in northwest Indiana, they are a group private practice that serves children, adults, and families. They work with Medicaid and DCS. They have 2 internship slots.***Please see the LMIC Handbook and Brochure on the Argosy student portal under the Clinical Training tab for further information***

Program Description

For more detailed information regarding the internship program, application process, and faq's, please see the internship website and click on the links on the left side of the web page.
Building upon partnerships with Chicago area community agencies and organizations, The Chicago School Community Leadership Internship Consortium (CLIC) offers a 12-month, full-time pre-doctoral internship, consistent with a practitioner-scholar approach, that focuses on community-based clinical practice, and that prepares graduates for leadership roles in community agencies or organizations. The primary goals of the training program are to offer specialty training working with underserved and diverse populations, facilitate opportunities for continued growth in clinical service provision, and expose participants to the social, economic, and other organizational and contextual issues that impact community-based work. Each intern will participate in a major clinical rotation at a single consortium setting. We have three consortium settings, The Forensic Center, Lawrence Hall Youth Services, and Pillars. Within that setting, minor rotation experiences may also be available based on agency needs and intern interests and training goals. Each intern will spend at least four days per week at his/her consortium agency and one-half to one full day per week at the Chicago School campus. Interns will primarily engage in direct clinical services, consultation, outreach, assessment and scholarly activities. Interns will engage in approximately 20-25 hours of weekly face-to-face clinical time. At the outset of the training year, each intern will complete a Training Contract with his/her primary supervisor, outlining the goals, requirements, and activities within the training experience. The Training Contract will also detail the interns weekly schedule. The TCS Forensic Center is fully affiliated with The Chicago School of Professional Psychology, indicating that preference will be given to students of The Chicago School.

Program Description

IPAPIC endeavors to join together training organizations in the state of Illinois to create opportunities for Illinois psychology interns. A vision of IPAPIC is to grow each and every year by joining with new organizations to offer new training prospects. An important mission of IPAPIC is to offer services to underserved communities. By linking agencies, IPAPIC is able to offer such services, since training and supervision responsibilities are shared by the consortium. NOTE: If you are a private/group practice or training program interested in joining the consortium, please contact any of our sites for more information. Currently, Associates in Behavioral Science (ABS) and Psychological Consultations (PC), Child and Family Psychology Center (CFPC), MidAmerican Psychological Institute (MPI), Genesis Therapy Center (GTC), and Winfield Woods Helathcare (WWH) are consortium partners. During the training year, interns will collaborate with other interns in the consortium to participate in various learning activities, as well as an advocacy project with IPA. All programs offer excellent training opportunities in therapy, assessment and supervision. To apply to one of the sites in the IPAPIC, please apply through the APPIC website and directory. The specific Site Program numbers are : ABS 215812 for the Full Time, 215813 For the Part Time, PC 215811, and CFPC 215814, MPI 215815, GTC215816, WWH215817. For general information about the IPAPIC Consortium, please visit the website IPAPIC.com.

Program Description

Our Psychology Training Program, which is accredited by the American Psychological Association for internship training, has the goal of assisting interns in the development of the knowledge, skills and techniques necessary to function as professional psychologists. Ours is a practitioner/scientist program in that the emphasis is placed upon the various supervised activities an intern might perform. That is, patient care activities, such as assessment and intervention, are typically given a higher priority than more academic pursuits, such as research and teaching. This is not because we devalue the latter. Rather, it is because we perceive our site better suited to providing training in patient care functions. With this bias, we look forward to helping interns integrate these areas of training so that each can inform and reinforce the other. The primary method used to achieve this goal is based on the tutorial-apprenticeship model. Interns are assigned primary supervisors from members of the Psychology Training Staff and participate directly in the work of their primary supervisor. While it is possible to sketch the general character of the intern's involvement, the exact nature of the experience depends upon the supervisor-intern mix, for we try to individualize training as much as possible and use our resources to meet unique needs. In achieving individualized training objectives, our program requires that each intern demonstrate an intermediate to advanced level of professional psychological skills, abilities, proficiencies, competencies and knowledge in the areas of: a) theories/methods of assessment/diagnosis and effective treatments/interventions; b) theories/methods of consultation, evaluation, and supervision; c) strategies of scholarly inquiry; and d) issues of cultural/individual diversity relevant to the above. The Committee on Accreditation and Program Consultation can be contacted at 750 First Street, NE, Washington, DC 20002-4242; (202)336-5979.

Other Application Requirements
Per university policy and state law, the official offer of an intern position is contingent on successful completion of a criminal background check (see CSDC internship program website for additional details).

Program Description

The CSDC internship is designed to assist interns in integrating the science and practice of psychology using a developmental mentoring training approach. The internship year focuses on practice as both an art and a science. Our ideal intern is capable of using both paradigms to provide effective services. The first program goal is to provide training in a broad range of skills, including short & long term individual therapy, group therapy, assessment, crisis intervention, outreach, consultation, and supervision. Interns co-lead at least one therapy group and regularly develop and implement outreach presentations. Assessment training is focused on substance use/abuse and eating disorders in our college student population. Interns also provide supervision to a practicum student during the spring semester. We do not provide formal research training, although we support interns in completing their own doctoral research.

The second goal is to assist interns in developing their own professional identities and interests. This goes beyond clarifying a theoretical orientation to developing deepened awareness of individual strengths and areas for growth in a variety of roles. We are committed to providing interns experience with the daily responsibilities of psychologists who work in university counseling centers. One way the program addresses these goals is through a year-long professional specialization in a specific clinical area. The specialization allows interns to develop both breadth and depth of skills in their area of interest. It also provides interns an arena in which to explore the literature base and integrate it into their practice. Each specialization plan also includes a multicultural component focused on a designated student population.

The third goal is to integrate multicultural and ethical awareness into the development of the aforementioned competencies.

Program Description

CAPS employs a developmental-mentoring approach for training which emphasizes the progressive advancement of skills and identity through supportive collaboration with experienced mental health practitioners. Multiple training modalities promote and support intern's development toward essential competencies through increasing levels of responsibility, complexity, and difficulty in professional tasks over the year. The internship offers graduated learning opportunities in individual and group treatment, clinical assessment (triage & intake interviews), crisis intervention, consultation and outreach, preventive psychoeducational intervention, and supervision and training. Training activities include individual and group supervision, consultation, seminar, committee work, group project, and staff meetings. Interns also serve as mentors to practicum students by providing clinical supervision and collaborating on outreach programs. A comprehensive description of the internship program can be found at our website. Our philosophy of professional practice is "local clinical scientist." Our multidisciplinary staff stay current with scientific and theoretical literature in the field of mental health, and also draw from institutional research to understand the academic, social, and cultural composition of the local population and to better identify the developmental and psychological needs particular to Northwestern students. Interns will see clients who are diverse in ethnicity/culture, national origin, gender, sexual orientation and sexuality, physical challenge, and socioeconomic status. Our client population offers a diversity of clinical presentation, including developmental concerns, relationship difficulties, eating disorders, mood disorders, anxiety disorders, and characterological disorders. Interns learn to work with other clinicians, psychiatrists, medical personnel, and various student services in a collaborative model of mental-health service delivery.

Program Description

Grand Prairie Services is a comprehensive family service agency and mental health center providing a variety of services to residents of over 30 South Cook County suburbs. The area served by the Grand Prairie is large in population, and socially, economically and racially diverse. The Mission of Grand Prairie Services is the provision of holistic emotional and behavioral health services for individuals, families and communities of the Southland region of Cook County with an emphasis on recovery and optimal functioning. The goal is for the intern to learn to work as part of a team, and eventually function as a full colleague. The intern will be expected to conduct a minimum of 15-17 face-to-face clinical contacts weekly. The intern will also complete diagnostic batteries throughout the training year. The intern will participate in a variety of training seminars. For a more detail description of goals, please contact Grand Prairie.

Program Description

Our primary goal is to ready graduates for entry-level psychology practice who are professionally well-rounded and knowledgeable in a broad range of psychological skills. This goal includes proficiency in psychological assessment, diagnosis, treatment and consultation. In addition, our goal is to promote the integration of psychological science and theory with psychological practice and encourage understanding of individual diversity as it interfaces practice. Our program is learning and training based, as opposed to production based. Service delivery is subsumed under the training needs and interests of our interns. Interns determine to good measure their rotations, focusing on their training needs and interests. Intensive supervision and education are program priorities. We prefer applicants from scientist-practitioner academic programs. In 2014 Hines will have 5 General Track interns and 2 Specialty Track interns (Neuropsychology and Interprofession Outpatient Mental Health). Please see our brochure on our website for detailed information or contact our program at Caroline.hawk@va.gov to request a e-copy of the 2014-2015 brochure.

Program Description

Training Opportunities: SEVEN interns will be accepted for training. Two interns rotate for 6 months each between the Child and Adolescent Programs. Two interns rotate between the Adult and Addictions Partial Hospital Programs. Two interns rotate between the Eating Disorders and Self Injury PHP, and One intern spends 3 days in Neuropsychology and 2 days in Anxiety Disorders. Along with their primary placement, interns treat clients in the Training Clinic and conduct diagnostic testing; a research option is available for one intern. Intake Assessments: All interns learn the process of initial assessments to recognize level of care decisions. Psychological/Neuropsychological Assessment: Testing is comprehensive and includes a semi-structured interview, Intelligence, Personality, and additional measures as required. Neuropsychological measures are the preview of the neuropsychology intern. The Neurointern emphasizes one population, pediatrics or adult but will be exposed to all ages. Group, Family, and Individual Psychotherapy: Interns conduct group psychotherapy in the assigned intensive program and meet with patients and families on a regular basis. Individual therapy is conducted through the Training Clinic, which serves uninsured patients. All interns are expected to co-facilitate a weekly aftercare or multiple family group. Supervision: Clinical supervision is provided to interns by licensed clinical psychologists according to the following schedule: Two hours of individual, one hour of group, one hour of diagnostic supervision. Didactic Experiences: A series of planned didactic seminars, ProSeminar, is provided for all students. Interns attend a weekly Journal Club discussion of recent and relevant articles. One intern may conduct research with an emphasis on outcome measures. This replaces the diagnostic testing responsibilities. All interns complete a project that is tract specific.

Program Description

Hoffman Estates Health and Human Services Internship Program provides intensive experience and supervision in numerous modes of psychotherapy and testing. It also provides extensive experience in community prevention programming and employee assistance programs. Clinical experiences include: individual, couples and family psychotherapy; psychological test batteries; preventive community mental health programming. Opportunities exist for: employee assistance programming; career counseling; school consultation; community health services; applied research. Caseload: families, couples, individual adults, adolescents and children. Training experience also includes intake assessment, and crisis intervention, only during business hours. SUPERVISION: Supervision experience at Health and Human Services is varied and intensive, totaling approximately 7 hrs/wk. Each intern receives approximately 2 hrs/wk of individual case supervision provided by licensed psychologists. Each student also receives 1.5 hrs. of group supervision involving didactic and experiential family and individual therapy activities as well as case presentation and live supervision. Video and audiotaped case review is used extensively. 1.5 hrs of supervision in cultural diversity issues and 1.5 hrs of supervision is provided for community prevention programming biweekly, and one half hr/wk of supervision is provided for administration and special projects. Assessment activity is supervised 1 hr/wk. Support, encouragement, critical feedback are utilized to help interns develop professional abilities that fit their own interactive style and enhance their therapeutic effectiveness. Interns have a caseload of approximately 12-15 cases; about 15 - 20% of those will be couples and families. Interns will develop and run a community prevention program. Interns provide intake assessments and have the opportunity to work with the employee assistance program.

Program Description

The Behavioral Health outpatient programs of the Will County Health Department serves severely emotionally disturbed children and adolescents ages 3 to 17, adults with chronic mental illness, youth and adult individuals court-ordered due to offenses related to domestic violence, sexual offense, and substance abuse. Services provided in an outpatient setting include comprehensive assessment, individual, group, and family therapy, case management, respite services, crisis intervention, psychiatry, and referral and linkage to other needed services. A satellite of Will County Health Department is the River Valley Juvenile Detention Center. This site serves preadjudicated male and female youth ages 10-17. Services provided within the detention center include individual counseling, group psychotherapy, crisis intervention, and court-ordered psychological evaluations. Please note site preference in your cover letter. Corrections or related experience preferred. All interns structured supervision and training, TCS emphasizes ongoing informal and collaborative relationships with all staff members and an "open-door" policy for consultation throughout the internship experience. Training focuses on the provision of psychotherapy and counseling through various modalities and an increased understanding at a systems level of the complex and valuable role played by a college counseling center at a large, urban university. The mission of TCS includes providing counseling-related services for a broad spectrum of emotional, interpersonal, educational and vocational issues. TCS employs a multidisciplinary team that works with students on a short-term basis. The University's diverse population provides our trainees with a rich multicultural counseling experience. In addition, the TCS staff is diverse in terms of theoretical approach, training, and areas of expertise. TCS is fully accredited by IACS.

Program Description

The internship is designed to train clinical/counseling psychology pre-doctoral interns in providing psychological services in a college counseling center. Interns will have the opportunity to experience the variety of roles that psychologists perform on a small liberal arts campus. The agency is part of the Health and Wellness Center which includes Counseling Services and Health Services. The Health and Wellness Center offers holistic and proactive services aimed at helping students to acquire the necessary skills to lead healthy and productive lives. Interns will have the opportunity to develop programs and workshops that will be part of the Center's mission. The internship adheres to a practitioner-scholar model of psychological training and service delivery. The practitioner-scholar training model emphasizes the integration and application of critical thinking and skillful reflection across a broad range of activities. The primary goal of the internship is to assist interns in their development to become skilled generalist practitioners. The opportunity also exists to develop specialty interests; examples of past specialty interests include eating disorders, AOD, sports psychology, and multicultural programming. The internship attempts to help interns develop the skills necessary to use themselves as an important instruments of change in the counseling relationship. Interns will be encouraged to focus on their personal growth and increasing self-awareness. Interns will gain an awareness and sensitivity to diversity throughout the internship. Interns will be provided with continuous and intensive supervision, as well as multiple training seminars with special emphasis on community psychology, diversity, and clinical practice. Supervised experience is provided for psychotherapy services; intake assessment; psycho-diagnostics; crisis intervention; educational interventions (psycho-educational seminars); and program development/evaluation.

Program Description

The internship program provides training in skills and experiences essential to the practice of clinical psychology (i.e., the core therapeutic skills cited by Wampold-particularly developing a therapeutic alliance) and includes year-long involvement in all three main programs: residential, therapeutic day, and outpatient treatment. The Allendale Association internship program is dedicated to the thorough training of interns in the areas of psychological assessment, diagnosis, intervention, consultation, and professional conduct. It offers intensive training and experience with diverse treatment populations and exposes the interns to a variety of treatment modalities, including individual, group, family, and play therapy. The internship is predicated on the belief that a competent psychologist must have a knowledge and understanding of clinical psychology that is grounded in theory socialization. Focus on professional ethics and multicultural sensitivity and competence is emphasized. 3) To provide training in a variety of activities associated with university counseling centers. Activities include outreach, consultation/liaison, program evaluation, and supervision of pre-professionals. A clear strength of the internship program is the amount and quality of supervision. Each intern receives three hours of individual clinical supervision from two clinical supervisors, one hour each week for case conference, one hour co-leader supervision of group. In addition, interns have the opportunity to interact with and to be supervised by professional staff in group psychotherapy, teaching, supervision of supervision, and crisis intervention. Interns receive supervision in all professional areas which reflects our commitment to training. The program is currently accredited by the American Psychological Association. The Committee on Accreditation and Program Consultation can be contacted at 750 First Street, NE, Washington, DC 20002-4242. (202)336-5979.

Program Description

Connection's Day School (CDS) is a private therapeutic day school, founded in 1998, that serves high-risk children and adolescents who require an alternative school program that is both educational and therapeutic. CDS utilizes therapeutic, educational, family and community connections to promote social/emotional well-being, academic achievement and personal growth. CDS Staff Members employ a variety of methods to support students in their efforts to make academic progress, appropriately manage their behavior, and develop their coping and social skills. Staff Members are able to establish and maintain supportive, nurturing relationships with our students by utilizing a combination of respect, humor, empathy, and kindness balanced with firmness (i.e., maintaining high expectations and ensuring that students adhere to established rules and boundaries).

Program Description

Our agency is a JCAHO-accredited community mental health center that serves the needs of DuPage County residents. An array of office- and community-based services are provided in order to maintain and improve the adaptive functioning of clients. Services also promote the development of community resources in partnership with consumers and their families, and coordination between public and private providers. The clientele is primarily comprised of severely and persistently mentally ill adults, and severely emotionally disturbed youth and their families. Interns are integrated into multidisciplinary outpatient treatment teams serving either the adult population or the child and adolescent population. In addition to individual, group, and family therapy, treatment services include collaboration with psychiatrists, case management, crisis intervention, relapse prevention, psychoeducation, psychological testing, and coordination with medical, legal, occupational, and/or educational professionals. Treatment services facilitate a strength-based approach which involves collaboration with clients and their families during the treatment process. There are numerous training opportunities for interns. Interns participate in a weekly seminar on either psychodiagnostic testing or treatment/professional issues. Interns can attend agency and community-based training events. Integration of the interns into the mental health treatment team provides daily interaction and multiple learning opportunities, both formal and informal, with experienced mental health professionals. Involvement in specialty areas is possible. Please note that interns train throughout the year in only one track, either the Child & Adolescent Track or the Adult Track. Clearly state the Track(s) to which you are applying. CONTACT THE PROGRAM TO OBTAIN THE TRAINING BROCHURE VIA EMAIL. Applicants are required to send one psychological test report with their AAPI application.

Program Description

Linden Oaks is a 94 bed behavioral healthcare facility. We provide inpatient, outpatient, partial hospitalization and intensive outpatient services to the northwestern suburbs of Chicago. Predoctoral students can be placed in one of the following areas: Eating Disorder Unit, Adult Inpatient Unit, Chemical Dependency Unit, Chemical Dependency Intensive Outpatient, Adult Intensive Outpatient, Adolescent Intensive Outpatient, Anxiety Program Intensive Outpatient (Adult), Anxiety Program Intensive Outpatient (Adolescent). It is noteworthy that the availability of predoctoral placements on these and other units change within the year, and therefore might change by the time the placement begins. We are committed to training students in functional contextual behavior therapies. These therapies include Acceptance and Commitment Therapy, Dialectical Behavior Therapy adolescent assessment and psychotherapy, cognitive-behavioral psychotherapy, sleep disorders, neuropsychology, ethics, professional development and advanced personality assessment.

Program Description

Trinity Services, Inc is a non-profit agency located in the southwest suburbs of Chicago that serves persons with serious mental illness and intellectual disabilities. The mission of Trinity is to help people live full and abundant lives. Trinity specializes in the use of third-wave cognitive behavioral therapy models, including Acceptance and Commitment Therapy, Dialectical Behavior Therapy, and Functional Analytic Psychotherapy. An intern's primary rotation occurs at one of Trinity's three psychosocial rehabilitation (PSR) programs. Additional rotations can include the Autism and Family Resource Center, the Illinois Center for FASD, the Illinois Crisis Prevention Network, and an administrative rotation.

Program Description

The Illinois School Psychology Internship Consortium (ISPIC) consists of a number of school districts, hospitals, and mental health agencies offering a broad range of experiences for doctoral interns in school psychology. The four institutions in Illinois granting doctoral degrees in school psychology (Illinois State University, Loyola University Chicago, Northern Illinois University, & The Chicago School of Professional Psychology) partner with the sites with regard to administration, supervision, and training. The program consists of a 2000-hour internship that is completed within a 12-month period. Each setting may provide a number of different rotations for the intern. Supervision, seminars & additional selected learning experiences are an important component of the internship program. NASP requirements for school psychology certification and IL requirements for licensure for independent practice are met. The overarching theoretical orientation represented across sites is the developmental-ecological model. This perspective of understanding human growth, development, learning and maladaptive behaviors is integrated into service delivery and seminar trainings. The sources of problems & potential solutions often lie within the various systems impacting the child and family. Interns are taught to understand behavior, assess, and intervene at various levels. A developmental perspective is provided as the roles of these systems change as children mature. ISPIC is based on the practitioner-scientist model of training. Our goal is to educate psychologists who integrate their knowledge of scientific principles with their applied clinical skills to improve the lives of children and families. This integrated approach to science and practice promotes a career-long process of psychological investigation and intervention based on an understanding of data-based problem solving methods that are equally effective for practice-related issues as well as research.

Program Description

With our developmental-mentoring training model, we are committed to excellence in training in the context of a comprehensive service delivery system that offers clinical, career, training, psychiatric, and developmental services to a diverse university community. The three major goals of the internship training program are: 1) To provide training in the planning, delivery, and evaluation of high quality, professional, and comprehensive psychological services to clients. Activities include training in individual psychotherapy, group psychotherapy, crisis intervention, and assessment. 2) To provide training in the general practice of professional psychology. Activities include intern training seminars and case conferences, diversity seminar, and professional development activities to assist interns in the process of professional identification, integration of learning, and

Program Description

The internship provides individualized supervised training in psychological service delivery. The "hands-on" training experiences are graduated in complexity, build on abilities and previous learning, and are augmented by other forms of learning aimed at expanding interns' theoretical understanding and knowledge, and integrating it with his/her professional practice skills and competencies. The training year is divided into a 3 to 4 week orientation period followed by three 16-week clinical training rotation periods. All interns are required to complete two major (16-week) rotations. The remaining 16-week period may be taken as a third major rotation or as two 8-week long minor rotations. Interns will work primarily with adult and elderly male patients and with younger active duty Navy personnel who suffer from a wide range of physical and mental health problems. Access to training with patient populations not available at CJAL FHCC (children, adolescents, females) is made available for breadth of training or "rounding-out" purposes in the form of an educational detail or extra-VA rotation in properly supervised non-VA settings, for up to 8 work weeks. The program encourages scholarly interests and provides some time and support for scholarly activities. Its primary focus however is on broad and general experiential training in preparation for psychology practice. By nature of its setting and the VA's primary and secondary missions, (service delivery and training), the internship's primary training strengths are in preparing interns for practice in complex comprehensive private and public health service delivery environments such as hospitals and medical centers. 1 year after completing training the intern is expected to be able to sit for and pass the professional psychology licensure, certification or registration examination, and enter the practice of psychology as a beginning professional.

Program Description

INTERNSHIP PROGRAM GOALS AND PHILOSOPHY The JCFS internship program adheres to the philosophy that children, adolescents, and their families benefit from a range of individualized services that are based on assessed needs and strengths. JCFS realizes that client progress can take a long period of time. Therefore, JCFS clinicians have the luxury of doing long-term treatment. JCFS believes clinicians should have a strong generalist foundation in clinical practice prior to specialization. JCFS training reflects this philosophy by offering opportunities to enhance core skills, as well as opportunities to develop specific areas of professional practice and interest. The goal of the JCFS internship program is to prepare interns for future independent practice. This internship hopes to provide interns with a chance to develop a variety of skills related to being a professional psychologist. These skills go beyond clinical practice and include: program planning and development, consultation, supervision, and research. JCFS hopes the interns will leave with a sense of confidence and competence in each of these areas. The primary focus and purpose of the JCFS intern training is to assure breadth as well as quality of training. Interns will be assigned to one of 2 regions within JCFS. The Metro Region serves the North-side of Chicago and Skokie area. The Suburban Region serves Northbrook, Buffalo Grove, and other nearby suburbs. 2-4 hours of dissertation time can be arranged each month with the Director of Training. Interns receive a minimum of 3 hours a week individual supervision, a weekly intern seminar, 9 hours per month of neuropsychology training, and 1.5-3 hours per week of participation in the Psychology Seminar and/or other agency trainings. Dissertation supervision is available as needed. Interns are given the opportunity to serve as a secondary supervisor to an extern.

Program Description

***Site Update: Shared Vision Psychological Services was recently awarded an APA Grant to pursue APA Internship Accreditation; our self-study process is under way, in active pursuit of a site visit for the coming training year.**

Our clinic fosters professional development through balanced and extensive supervision that affords consistent guidance, encouragement for self-reflection and awareness, and support for increased autonomy and growth. The established training program at SVPS maintains the utmost attention to current research and literature, considerations for diversity, effective multidisciplinary collaboration, and professional ethics. We strive to provide the highest quality training environment and rich clinical opportunities that propel trainees into creative, unique, and fulfilling careers in clinical psychology. In order to support the overarching goals of the Clinical Psychology Training Program, our year-long curriculum includes many clinically diverse components. Interns provide a broad range of treatment services at our outpatient clinic, including play therapy, individual psychotherapy, family psychotherapy, group psychotherapy, couples therapy, and parent guidance services, as well as conduct comprehensive diagnostic evaluations incorporating psychological, neuropsychological, and developmental facets of assessment. On a weekly basis, interns assume leadership roles in our intake department, as well as participate in therapy supervision, diagnostic supervision, group supervision, and didactic and experiential seminars that include rotating clinical topics, case presentations, and trainings emphasizing the integration of professional literature and clinical practice. SVPS also offers specialized programming, in which interns are encouraged to engage, including: Developmental & Special Needs Services, Adopt-Adapt-Attach, and School & Community Enrichment. Please note that SVPS specifically offers formal training from a dynamic lens, with a particular emphasis on attachment-based approaches. Thus, only applicants who have had prior experience and/or are interested in acquiring a background working from these theoretical perspectives will be considered for review.

Program Description

We are an APA-accredited pre-doctoral clinical psychology training program located in Oak Lawn and Bolingbrook, IL. Position is 5 days per week with an average of over 45 hours of work per week. Interns are expected to work evenings. We provide outpatient clinical services in our Oak Lawn and Bolingbrook, IL offices. Due to the necessity of driving to different locations, a working car is a requirement. We consider this to be an internship that focuses on providing testing and therapy to children, adolescents, and families that are within the foster care system, have suffered some form of maltreatment or sexual abuse, and may have sexual behavior problems. Many cases are children, adolescents, and their caregivers that are within the foster care system (DCFS). Most patients have suffered forms of sexual abuse, maltreatment, or trauma. Some patients are children (ages 15 and under) that have sexual behavior problems such as sexually touching other children, sexual aggressiveness, sexual reactivity, and other related sexual difficulties. Interns also have additional clinical cases and experiences that provide clinical experiences other than trauma or foster care cases (such as evaluations and brief therapy services for children, adolescents, and families that have a range of behavioral health issues). We encourage and welcome individuals of all cultures, ethnicities, diversities, races, and backgrounds to apply to our program. For additional program information, please go to our website at www.advocatehealth.com/familycarenetwork and select the link for "pre-doctoral clinical psychology training program." Here are the locations of our two practice addresses:
 Oak Lawn Office: 4700 W. 95th Street, Suite LL5/Oak Lawn, IL 60453
 Bolingbrook Office: 391 Quadrangle Drive, Suite N4Bolingbrook, IL 60440
 Please submit internship applications to us via the internet following the APPI Online process.

Program Description

St. James Hospital and Health Centers offers predoctoral training in behavioral health with a focus on consultation services. These training opportunities occur at the Olympia Fields and Chicago Heights hospital campuses and include inpatient clinical work. Training is conducted on all medical/surgical, telemetry, intensive care/cardiac care, rehabilitation, pediatric, maternity/child, and emergency units/departments. The Behavioral Health Department is an integral part of the bariatric surgery, oncology, and cardiology teams. Brief therapy experiences are also available with these inpatient populations. In addition, St. James has both a Comprehensive Cancer Institute, and Heart and Vascular Institute that provide additional behavioral health training, including outpatient treatment opportunities and some group work. As St. James Hospital is a teaching hospital for osteopathic physicians from Midwestern University, Behavioral Health Residents have the opportunity to interact with medical students, interns, residents, fellows, and attending physicians on a regular basis. Our interns are expected to participate in daily medical rounds with medical interns/residents in the above units. Grand Rounds and other hospital-based programs will also be an integral part of the Resident's behavioral health education. Given the medical basis of the program, there is a significant amount of psychopharmacology involved in consultations. Specific training opportunities in assessment, including neuropsychology, are not a specific focus of this training program. Three full-time clinical psychologists will be available to provide supervision. The Chief Psychologist also requires a weekly one-hour group supervision meeting. Additionally, weekly peer supervision time is encouraged.

Program Description

The Pre-Doctoral Internship program in Clinical Psychology at the South Campus Day School has been designed to help interns acquire and refine their clinical skills in key areas of practice, while functioning as a valued member of a multi-disciplinary team. There is an emphasis on training in fundamental clinical skills with a primary focus on individual, group and family therapy. Interns are provided with opportunities to work with frequently challenging/ complicated children, adolescents and their families who often exhibit a wide range of emotional and behavioral issues. Interns also get an opportunity to work with people of all ages, and diverse cultural and ethnic backgrounds. Supervision is provided by Licensed Clinical Psychologists, as well as other training staff. The primary training goal/objective is to promote interns professional growth in such a way that, they feel more confident in their ability to function as Clinical mental health providers, with the ability to practice in accordance with the highest standards of care.

Program Description

NCA is a therapeutic day school for students ages 7-22 years with autism spectrum disorder. Most of the students have a dual diagnosis of ADHD, anxiety disorder, bi-polar disorder, major depression, or other mental health disorders. Therapy includes individual, group and family therapy. The Commission on Accreditation with the American Psychological Association Office of Program Consultation and Accreditation to become an APA-accredited internship. A site visit is planned for December 2013. Inquiries regarding the status of the application may be made at: Office of Program Consultation and Accreditation American Psychological Association 750 First Street, NE Washington, DC 20002-4242 (T) 202-336-5979 (F) 202-336-5978 www.apa.org/ed/accreditation/ E-mail: apaaccred@apa.org

Program Description

Palos Behavioral Health Professionals is an outpatient mental health practice, which combines the services and expertise of psychology, psychiatry, and master level mental health professionals to provide a variety of multidisciplinary mental health services. The organization provides individual, marital, family and group psychotherapies, psychiatric evaluation and medication management, psychological evaluations, school interventions, holistic psychological services in dealing with medical illness, intensive adult and adolescent services, neuro and bio feedback, and TMS therapy. These services reach a population from ages 2 through geriatric.

Program Description

The Forensic Psychology Training Program of Liberty Healthcare functions within Illinois Department of Human Services and provides the Intern with the following learning opportunities: 1. Direct, face-to-face, contact with residents will comprise greater than 30% of the Intern's time; while other clinical activities will represent approximately 60%. Nonclinical activities will be included in the Internship (e.g., administration). Care will be taken to ensure these activities are kept to a minimum; less than 10% of the Intern's time. 2. The Intern will receive two hours of licensed supervision each week: one from the Director of Training & Research and another from a Licensed Psychologist on staff. The format of supervision is trainee focused; addressing services provided and other topics the Intern might bring. The Internship is a 2000 hours training experience involving the following learning opportunities: Treatment: co-facilitate 15 hrs/wk Sex Offender specific groups treatment with a senior staff member; and have a primary caseload of 10-12 residents. A minimum of five (5) psychological batteries will be completed. The Intern will be responsible to prepare detailed treatment plans and bi-yearly treatment plan reviews for the residents on the primary caseload. The Intern will participate in both the bi-weekly team staffing and the weekly case conceptualization. The Intern will receive mentoring from a Post Doctoral Fellow. Didactic training is committed to diversity awareness, knowledge, and the acquisition of skills to increase multicultural competencies. Three Multicultural case presentations will be required. During the training year the Intern will be exposed a broad scope of Forensic issues through various learning methods and opportunities. There will be the opportunity for research at the facility if this is an area of interest for the Intern. Research topics will be provided at the commencement of the training year. See link below for further information. www.libertyhealthcare.com/upload/112.pdf

Program Description

The Meier Clinic of Wheaton offers a pre-doctoral internship in clinical psychology and neuropsychological assessment. This training program provides an opportunity to learn clinical applications with a Christian emphasis. Each year, three students will be selected to participate in the program. This is a 12-month internship that requires 2,000 hours with at least 25% of this time in direct client contact. These hours will be distributed between outpatient, day program, and adolescent IOP or neuropsychological assessment. Clinical interns are trained in individual, marital and group therapy, and mental health programming. Caseloads include individuals, families, adolescents and children. Neuropsych interns are trained in neuropsychological assessment and intervention. Psychodiagnostic testing for several patient populations will be a part of the training experience for all interns. Each intern receives two hours per week of individual supervision with a licensed clinical psychologist. In addition to this, each student receives two hours of group supervision involving didactic and individual therapy activities as well as case presentations. During the year, there are a variety of seminars and in-services for the staff and interns. The primary activities for the clinical internship consist of outpatient counseling, partial programs, and assessments. Interns will see between five and ten outpatients per week in individual, marital, or family therapy. In the partial programs, the intern will manage individual cases, co-facilitate group therapy and participate in staffing. The interns will also provide individual counseling to partial program patients three times per week, and will carry one to two cases at a time. Interns will rotate between process groups, expressive therapy groups in both the adult and the adolescent partial programs. The interns also facilitate the weekly aftercare group for discharged day program patients.

Program Description

The pre-doctoral psychology internship program at MCCHC-IU Health Consortium of East Central Indiana is designed to prepare interns for independent practice in psychology. This goal is achieved through experiential training activities that prepare interns to provide service to a diverse patient population, offering experience in the assessment of psychological disorders and training in the application of empirically supported treatments. Interns at MCCHC-IU Health Consortium have the opportunity to choose from major rotations in school psychology, primary care, and community mental health. In the school psychology rotation, interns will work with children in local school systems. The major rotation in primary care would introduce interns to an integrated care model consistent with the patient centered medical home. In this rotation, consultations with medical patients and their primary medical providers are a primary form of service delivery. In the community mental health major rotation, interns will provide individual and group therapy in the behavioral health department of MCCHC. Currently, a major rotation at the Indiana University Ball Memorial Hospital Family Medicine Residency Center (FMRC) is offered to all interns. At the FMRC, interns would gain experience in medical education, administrative responsibilities, primary care assessment, and primary care psychology.

Program Description

CAPS serves as a counseling and mental health center for the 45,000+ diverse students at Indiana University. The internship emphasizes interpersonal and cognitive therapy and offers abundant clinical opportunities with individuals, couples, and groups. Additionally, the program offers supervised supervision experience and outreach activities. The on-line brochure provides extensive information about the program. We would like to highlight a few of our strengths here. We have consistently received feedback from interns that they have received high quality supervision, many saying it was "the best supervision they have had to date. Interns have also been pleased with the variety of clinical experiences they have had, and that the student population was more clinically diverse than anticipated. Our interns appreciate the warm, interested, and involved staff and the overall positive environment with a minimum of staff issues or office politics to contend with. Finally, interns have "loved" their offices and felt sad to leave them.

Program Description

Park Center is a Community Mental Health Center that primarily serves three counties in Northeast Indiana. Our client population is diverse in terms of presenting complaints, race, ethnicity, and socioeconomic status. Park Center's mission is to restore the lives of clients by facilitating and supporting their journey towards recovery. Our psychology training program adheres to a generalist, Practitioner-Scholar model. Interns will carry a case load of children, adolescents and adults that are served throughout several of our programs at the center. Throughout the course of the year, interns will provide initial intake assessments, individual and family therapy, and psychological testing. Each intern will be required to cofacilitate at least one DBT group and once substance abuse group for the training year. Additionally, interns will provide individual treatment to clients within the DBT program as well as to clients in the home/community through our home based services program. They will also spend one day per week in one of our rural offices providing outpatient services to those communities. Treatment is provided by multidisciplinary teams in most programs. Supervision is provided through both individual and group formats. Each intern will receive 1.5 hours of supervision for clinical cases and 1.5 hours for diagnostic and testing cases. In addition, one hour of professional development group supervision is provided that also covers topics of supervision and consultation. One hour of group supervision with the DBT treatment team is also provided. Psychology staff theoretical orientations include cognitive/behavioral, psychodynamic, and family systems primarily. There is also a weekly seminar provided just for the psychology interns on a variety of topics including issues relate to diversity, ethics, testing and specific therapeutic modalities.

Program Description

This internship is a consortium in which interns split their time each week doing clinical work at Butler University Counseling and Consultation Services and either Aspire Indiana (a CMHC) or Charis Center (for eating disorders). The two programs offered—Generalist and Eating Disorders—are both administered through Butler University and provide generalist training overall, with the latter program emphasizing eating disorders. The Generalist Program has 2 positions and the Eating Disorders Program has 1 position. Applicants can only apply to one program and are asked to specify which program they are applying to in their cover letter. Offers are contingent on applicants successfully completing required background checks. This program is accredited by the American Psychological Association. Questions related to the program's accredited status should be directed to the Commission on Accreditation/Office of Program

Program Description

As a predominantly commuter college campus with a large number of non-traditional students, the clinical experiences at IUPUI CAPS include opportunities to work with clients diverse in age, gender, race/ethnicity, country of origin, sexual orientation, religion, socio-economic status, and presenting concerns. The most prevalent diagnoses of treatment are clinical levels of depression and anxiety. Opportunities to work with individuals presenting with PTSD, bipolar disorder, autism spectrum disorders, relationship concerns, and adjustment issues are also available. Clinical experiences include crisis intervention, intake assessment, and individual/group/relationship counseling. The internship training experience will include training in the assessment and testing for learning disorders and ADHD, in addition to diagnostic assessment of therapy clients. On-site weekly individual supervision is provided by CAPS' licensed professional staff. Additional group supervision is provided during a weekly 2-hour case conference with other pre-doctoral interns, practicum students, post-doctoral fellows, and clinical staff. During group supervision, intake presentations are staffed and one on-going case is discussed in depth. Weekly Didactic Training seminars are provided by staff and community professionals for two hours per week. Interns may also attend Psychiatry Grand Rounds at the Indiana University School of Medicine, located on the same campus.

Program Description

On July 1, 2009, Southlake Center for Mental Health acquired Tri-City Community Mental Health. The legal name of the combined agency will continue to be Southlake Community Mental Health Center, Inc., though we will be doing business as, Regional Mental Health Center. The combined internship program includes primary training in outpatient therapy and assessment, and elective rotations in adult inpatient, adult day treatment, child/adolescent treatment services, addictions treatment, emergency services, primary behavioral healthcare, and assertive community treatment (ACT). Both Centers have had long-standing APA-approved pre-doctoral psychology internship programs. Southlake's pre-doctoral internship program has been APA accredited since 1986. Regional Mental Health Center is a comprehensive community mental health center. The internship includes training in outpatient therapy and assessment with a diverse client population, including children, adolescents, and adults with a wide array of diagnoses. We also offer elective rotations in primary behavioral healthcare, adult psychiatric inpatient, addictions, adult day treatment, assertive community treatment (ACT), child services, and emergency services. This is a generalist program, whose goal is to provide broad based training in clinical work with adults and children in psychotherapy and assessment in a variety of psychotherapeutic contexts. We adhere to a practitioner model of training. In following this model, the program's principal goal is to train competent and ethical psychologists who will be clinically prepared for independent clinical practice. The theoretical orientation of the program is eclectic. Cognitive, behavioral, object relations, interpersonal, and systems orientations are among those represented among supervisory staff. Short-term psychotherapy is emphasized, although long-term cases may be seen at the Center primarily with child/adolescent or family cases.

Program Description

The program is a practitioner developmental/mentoring model. It incorporates theoretical and research foundations of practice and integrates social justice, multicultural knowledge and experience. Focus of training: development of skills and competencies, development of skill in one or two areas of major focus and a focus on personal and professional development. Interns train in and are provided practice opportunities in clinical work (individual, group, and crisis-some couples), outreach and consultation and supervision. Interns choose a major focus area that can be tailored. Interns receive supervision and focus part of their clinical load in area of major focus. May choose group work and outreach team related to major clinical focus. Serve on two outreach teams. Interns serve on clinical teams with their supervisor and two Masters trainees where they provide both individual and group supervision for these trainees over the year becoming their primary supervisor. Interns complete a social justice project. Intern supervision includes weekly: 2 hours individual, 1 hour of major focus area, 1.5 hours of supervision of supervision, 1.5 hours intern case conference, 1 hour meeting with TD, 2-4 hours training seminars, 1/2 hour of supervision for every 1.5 hours of group therapy. Interns meet in clinical teams 1 hour weekly and 1 hour with each outreach team. Interns take on more leadership in all areas of their practice over the year. The program supports interns in the transition to internship, through internship and into the psychology profession.

Program Description

The Youth Opportunity Center is a state-of-the-art, private, non-profit organization that specializes in a full continuum of residential treatment for children, adolescents, and their families. The YOC offers mental and behavioral health services for all levels of care. The campus-style setting features 9 residential cottages, 44-bed co-ed detention center, 28-bed locked secure unit for emotionally disturbed and violent children, independent living program, on-grounds school, day treatment program, on-grounds Delaware County Juvenile Court, Delaware County Probation Department, Department of Child Services, and full psychological assessment services. The facility is located on 57 wooded acres and has been specifically designed to provide optimum residential treatment options for a wide range of mental health needs. The internship program provides interns with opportunities to conduct individual and family therapies as well as comprehensive psychological testing. Numerous training opportunities are provided with psychologists on-campus and psychologists and professionals in the community. Interns are matched to cottage populations to get specialized training in a specific adolescent populations. Interns are exposed to a wide variety of childhood disorders, some in their most severe forms. Interns are encouraged to develop their abilities to provide individual, family and group therapy, make behavior plans to work with the residents and staff, learn to work as a cohesive multi-disciplinary team with others, understand and work with Special Education case conferences, work with probation officers and DCS caseworkers, manage crises, run therapeutic groups, attend and participate in court, provide parent training, and develop their psychological assessment and report writing skills.

Program Description

The internship program strives to train interns in the skills, behaviors, and attitudes of a psychologist working in the context of a university counseling center. These include: <cf3>professionalism,</cf3> <cf3>clinical intervention, outreach and consultation, and supervision,</cf3> <cf3> In addition, attention to <cf3> cultural diversity,</cf3> and <cf3>evidence-based practice,</cf3> are integrated throughout the course of training. Interns will also develop competency in providing clinical and educational skills in a training concentration including substance abuse, eating disorders, or mind/body therapeutic approaches in the course of the internship year. The program has a dual focus on both clinical training and professional growth. It is expected that interns will make significant developmental transitions during the internship year, including consolidation of a professional identity, enhanced confidence in skills, and increased ability to function autonomously. The training program recognizes the inherent stress that accompanies these transitions. It is designed to provide activities, procedures, and opportunities that facilitate optimal professional growth while remaining sensitive to the challenges of that growth. While interns frequently seek counseling center positions as their first employment, the training at the University of Notre Dame's Counseling Center is broad enough to prepare interns well for a variety of employment settings.

Program Description

The Psychology Services department at the Federal Correctional Complex (FCC) in Terre Haute, Indiana appreciates your interest in our pre-doctoral psychology internship program. In March 2009, FCC Terre Haute received approval from the Federal Bureau of Prisons (BOP) Central Office in Washington, D.C., to activate a pre-doctoral psychology internship program, with the first class of interns starting in the 2010-2011 internship year. There are currently four full-time intern positions available. Although not yet accredited, FCC Terre Haute is actively pursuing accreditation through the American Psychological Association. FCC Terre Haute will continue to build on the internship traditions, accomplishments, proven standard operating procedures, and core elements instituted by her sister BOP institutions. The goal of the internship program at FCC Terre Haute is to train entry-level professional psychologists who can also function competently in the correctional environment. Objectives of the program include training interns to be proficient in: assessment & diagnosis; planning & implementing evidence-based interventions; consultation with other disciplines; practicing within ethical guidelines; application of science to practice; awareness & sensitivity to cultural diversity; and involvement in professional activities, including supervision, training, and program evaluation. Interns are required to complete 2,000 hours of training over a 12-month period. For more detailed information about the internship program, applicants are encouraged to visit www.bop.gov/jobs/students/cpdiphx2.pdf.

Program Description

We believe that training future psychologists creates an essential vitality in our agency. Our practitioner-scholar training philosophy emphasizes "learning by doing" while consulting empirical literatures. We offer an interactive process-oriented learning experience coupled with presentations of up-to-date research and theory. The staff utilizes a variety of theoretical approaches including: interpersonal, cognitive-behavioral, multicultural, gestalt/experiential, and psychodynamic. Woven throughout the training program is an appreciation for the diversity of all people. Interns fulfill the multiple roles of a counseling center psychologist including individual and group therapy, training and supervision, crisis services, assessment, research, and outreach and consultation. Our interns are very successful in obtaining counseling center and faculty positions. We offer a broad range of supervision and training experiences to fit the individual and shared developmental needs of the interns. To meet the shared needs of interns, group training experiences are sequential, cumulative, and graded in complexity. To meet the individual needs of interns, interns are given considerable choice regarding their numerous training opportunities and responsibilities (for example: supervisors, types of groups, outreaches, and choice of special emphasis areas). We believe that the greatest growth is facilitated via reciprocal and ongoing feedback in a supportive climate. Staff strives to provide a collegial atmosphere in which interns are offered many opportunities to provide leadership. As the year progresses, interns may assume increasingly independent roles in service provision. Ultimately, we seek to facilitate skill acquisition and professional maturity resulting in persons capable of self-regulated, ethical, and sophisticated work as psychologists.

Program Description

Our on-line Internship Brochure is available at: <http://www.psychologytraining.va.gov/centraliowa/>. It contains additional program information, such as examples of the rotations that either are currently offered or are planned for the coming internship year. If additional information is desired after reviewing the Brochure, our Internship Program Manual is available in electronic format upon request. The program is fully accredited by the Commission on Accreditation of the American Psychological Association (with the next site visit scheduled for 2016), and it offers the opportunity for applied experiences at both the Des Moines and Knoxville campuses of the VA Central Iowa Health Care System. Most rotations are in Des Moines, with a rural mental health rotation offered at the Knoxville facility. We emphasize and promote diversity. Psychology at VA Central Iowa has an active program of minority recruitment and solicits applications from minorities and other historically disadvantaged groups, such as those with physical challenges. Consequently, students from diverse backgrounds (e.g., ethnicity/race, lifestyle, disability) are strongly encouraged to apply. Applications from minorities and other historically disadvantaged groups, such as those with physical challenges. Consequently, students from diverse backgrounds (e.g., ethnicity/race, lifestyle, disability) are strongly encouraged to apply.

Program Description

Scientist-practitioner model. Primary focus is on counseling skill, especially in brief therapy. Strong emphasis on developing skills in the establishment and maintenance of professional working alliances. Interns are trained in evidence-based practices. Interns provide longer-term therapy and facilitate therapy groups. Assessment training focuses on interview assessment; however, MMPI-2 and other paper-and-pencil measures are also integrated. Trainers are diverse in gender, sexual orientation, language, race, ethnicity, and religion, as well as theoretical orientation. Trainers have worked to establish a multi-cultural organization in which differences in people, including our colleagues, trainees, and clients, are prized. Staff are committed to provide ethical, multiculturally competent services and training. Each intern selects an area of outreach emphasis, with a focus on a selected population or setting. During the spring semester, each intern provides clinical supervision for a doctoral student in counseling psychology. Interns participate in Supervision Seminar and meet individually with a supervisor-of-supervision each week. Other seminars include Brief Dynamic Therapy Seminar, Empirically Supported Treatment Issues, Diversity Seminar, Program and Consultation Services Seminar, Professional Issues Seminar, and Assessment Seminar. Each intern will complete a clinical emphasis in which six hours weekly are devoted to the development of specialized skill. Options have included Mindfulness-based Treatments, Acceptance and Commitment Therapy, Treatment of Eating Disorders, and LD/ADHD Assessment. Although some changes may occur in the range of options available, alternatives will be similar.

Program Description

All interns in our program receive broadly-based training at this major academic medical center. Training includes adult inpatient and outpatient psychiatric populations, outpatient child and inpatient child psychiatric populations, and hospital and outpatient-based behavioral medicine. There are two tracks, a comprehensive track and an underserved populations track. Stipends for the underserved track are funded by HRSA. The tracks receive a core of similar experiences, but there is a greater focus on underserved groups in the underserved track. This underserved focus includes additional opportunities such as rural telemedicine, a state mental hospital rotation, and specialized work with other underserved and/or vulnerable populations such as American Indians, underserved medical outreach programs, and HIV populations. The intern must decide among many elective opportunities. The interns also work with a mentor to design and carry out a clinical program evaluation. Didactic training specific to clinical application is extensive. Additionally, there is a strong emphasis on the biological bases of the conditions treated, and the intern will learn a great deal about the neurobiology of psychiatric disorders as well as an excellent knowledge of many medical conditions.

Program Description

The Larned State Hospital (LSH) has three primary rotations: 1) State Security Program (SSP); 2) Psychiatric Services Program (PSP); and, 3) The Sexual Predator Treatment Program (SPTP). On SSP, all interns will be exposed to working with criminally committed patients. Pre-doctoral interns may have the opportunity to assist with various forensic evaluations (e.g., competency to stand trial assessments, mental state at the time of the offense determinations, and pre-sentence evaluations). On PSP, all interns will be exposed to working with patients either voluntarily or involuntarily civilly committed by court for inpatient treatment due to psychiatric issues causing them to be a danger to themselves or others. Pre-doctoral interns will have the opportunity to work with patient populations that range from age 18 to geriatric adults in various units designed to meet the specific needs of patients based on age, current psychiatric functioning, and

Program Description

The mission of the CAPS psychology internship training program is to assist in the development of generalist psychologists. The CAPS philosophy of training is grounded in the practitioner-scholar model. The CAPS internship program emphasizes the practitioner side of that perspective while instilling a scientific attitude in the approach to practice. We believe that the opportunity afforded by our multidisciplinary service agency on the campus of a large university lends itself especially well to the training of generalists who can integrate a number of professional activities influenced by a variety of perspectives. These perspectives are fostered by staff members' backgrounds in psychology, social work, family systems, and psychiatry. Our multidisciplinary staff provides training & intensive supervision in individual & group psychotherapy, supervision, consultation & outreach. Seminars address professional issues, diversity & assessment.

To facilitate their professional development, interns will be expected to:

1. provide clinical service to adult students (primarily ages 18-35) in the treatment of mild to moderate pathology, and with no session limit imposed; 2. provide assistance with developmental concerns, 3. provide preventive psycho-education to the campus community; 4. contribute to the profession through clinical supervision and mentoring of psychologists-in-training at the practicum level; 5. provide consultation to the campus community; 6. establish a professional identity and working relationships with clients and with other professionals guided by professional ethics, adequate legal awareness and sound professional judgment; 7. apply a scientific attitude of critical thinking in the conduct of psychological practice; and 8. develop an ability to understand and apply theory and research findings to clinical practice.

Program Description

The VA Eastern Kansas Healthcare System (VAEKHCS) Psychology Internship Training Program is comprised of two distinct sites (Topeka and Leavenworth) with a long independent history of APA-accreditation, dating back to 1946 and 1974, respectfully, and now officially APA-accredited as a joint program since 2000. The VAEKHCS supports 7 funded one-year predoctoral interns, 3 at the Topeka site and 4 at the Leavenworth site. The basic philosophy of the Internship Training Program is built on the assumption that after nearly a decade of undergraduate and graduate training, interns have attained a certain level of academic, professional, and emotional maturity which prepares them for the final formal educational and experiential step - the internship year. During the internship, students are provided a supportive, supervised environment in which they continue to develop competencies while assuming growing responsibility in preparation for functioning independently. Specific goals targeted during the training year include: 1.) Preparing scientist-practitioner based psychologists, 2.) Preparing competent psychologists, and 3.) Preparing interns for entry-level practice in professional psychology. Specific competencies targeted for training include assessment and diagnosis, intervention, consultation/communication, professional and ethical behavior, human diversity, research and scholarly inquiry, and supervision/program evaluation. While some training opportunities (i.e. Outpatient Mental Health Care, & Neuropsychology) are available at both sites, some opportunities are site specific. For example, Topeka offers major rotation opportunities on inpatient psychiatric units, inpatient and outpatient PTSD units, and geropsych. Leavenworth offers major rotation opportunities with Addiction Treatment Unit, Domiciled Homeless Veterans & Psychiatric Rehabilitation Program. The brochure contains details related to the variety of training opportunities at each site.

Program Description

The internship is located at The Guidance Center, a community mental health center that serves three rural counties in Kansas. All interns are based at our Leavenworth location, and may elect to participate in rotations at the more rural sites located in our other two counties. The Center is composed of a multidisciplinary, integrated treatment team of an entire range of mental health professionals and paraprofessionals. The mission of TGC is to provide quality care to the residents of our three county area, especially including those who have limited or no means to pay for their care and those affected by severe mental illness. TGC is part of a larger network in Kansas that works to minimize placement of those with severe illness outside of their home communities, even in the event of crises and exacerbated symptoms. The internship is designed to provide a generalist background in the practice of professional psychology in a community setting. A varied population with a broad range of psychological treatment needs results in psychologists who can implement various interventions from a stable theoretical base. GOALS* Provide clinical assessment of the psychological functioning of consumers, including the appropriate integration of formal psychological testing procedures. Identify, develop, and apply appropriate psychological interventions, based on empirical data from both scientist-practitioner and local clinical scientist models * Work effectively with a multidisciplinary team of mental health service providers while clearly maintaining the role of psychologist on that team.* Expand and enhance understanding of, facility with, and application of Ethical Principles and Practice Guidelines of the American Psychological Association, as well as issues of diversity in the delivery of psychological services.* Cultivate professional identity while assisting and supporting the identification of his or her particular professional interests

 Three letters of reference; transcripts; list of remaining graduate courses; practicum experience with college students (e.g., counseling center, departmental clinic, etc.).

Program Description

Guided by the scientist-practitioner model of training, our goal is to facilitate the development of competent, ethical, generalist psychologists who are respectful of human diversity, and who will contribute to their communities and the field of psychology. We emphasize the applied practice of evidence-based clinical and counseling psychology. Accordingly, we offer an array of seminars and supervised training experiences, all of which emphasize "learning by doing." Training and clinical work occur in a university counseling center that serves a campus community of 23,000+ students. Our interns gain extensive experience working with a wide range of Axis I and Axis II disorders and developmental concerns. Typical training activities include: individual and group psychotherapy; psychological/clinical assessment; career counseling, assessment, and teaching; supervision (receiving and providing); change and outcome assessment; plus consultation and outreach.

Program Description

Family Service and Guidance Center (FSGC) is a community mental health center with over one hundred years of experience providing services to children and adolescents in the Topeka community. FSGC provides a comprehensive array of clinical services including individual, group, and family therapy, 24 hour crisis services, and after school and in-school programs. In addition, FSGC provides assessment services such as psychological testing, and psychiatric consultation. We emphasize the use of projectives in our psychological testing assessments and training program in addition to objective measures of personality and intellectual functioning. Interns must complete and pass a background check and drug screening prior to beginning at this site. Interns have the opportunity to develop significant skills in working with children and adolescents across a wide range of ages, populations, and diverse economic and diagnostic groups. A large number of the children served come from underserved populations such as low SES, severe psychiatric disorders, and rural and urban environments. Interns provide approximately 15-20 hours of clinical service a week including psychological testing, diagnostic interviewing and intake, individual therapy, family therapy and group therapy. Interns attend a 1 hour a week intern seminar, a 2 hour a week didactic presentation open to all staff, a 90 minute play therapy seminar and a 2 hour family therapy seminar with live supervision behind a one way mirror. Additionally, interns may be requested to provide presentations to the community any where from 1-8 times during the year. There is opportunity for bilingual Spanish speaking interns to have clients who speak Spanish only or whose parents speak Spanish only.

Program Description

WCPIP utilizes the Local Clinical Scientist model (Stricker and Trierweiler, 1995). Our basic philosophy maintains that effective training is accomplished by providing comprehensive experiential opportunities in diverse settings through application of scientific inquiry to clinical problems. Adhering to this philosophy requires on-going respect for what science contributes to practice, and an appreciation of how practice influences science. Being informed and current with respect to the scientific literature results in the application of common practices when appropriate and the development of unique strategies when required by individual needs or circumstances. Training is accomplished in five very different settings. Within each site there is additional variation to the intern experience, depending on training needs and interests. All interns "switch" to an additional site for the equivalent of one day each week. This configuration allows for diversity of settings and breadth of experience. It is the intent of our Program that we produce generalists as practitioners who have entry-level skills by the end of the year. This means that as the year ends, primary interns are expected to provide the same range of services as our permanent staff members at their primary site. As faculty, we are aware of the developmental nature of the intern experience, and strive to provide necessary supervision and support. Early in the year, more time might be spent on modeling, observation, taping, reviewing work samples, or co-therapy. As the year progresses, interns are expected to handle greater caseloads and to expand their skills and thinking about cases, self, and professional issues. Typically, interns operate with increasing autonomy throughout the training year.</p>

Program Description

This internship is housed in an inpatient psychiatric facility located in rural Appalachia. The program is experiential and clinically focused, emphasizing sensitivity to rural issues and working with an underserved/underprivileged population. Interns provide individual and group therapy in an inpatient setting throughout the training year. Inpatient work involves exposure to primarily acute/severe (some chronic) psychiatric patients with the focus of treatment being on crisis stabilization. Interns also provide pre-surgical evaluations of patients in our bariatric clinic who are interested in obtaining bariatric surgery. Interns further conduct support groups for post-surgical patients struggling with weight loss. In the inpatient facility, opportunities are available to gain experience in working with sexual abuse trauma survivors, elderly inpatients having dementia and superimposed psychiatric disorders, substance abusers, and the chronically mentally ill. Interns work in a multidisciplinary treatment team environment and collaborate extensively with other professionals. Inherent to rural clinical settings is the need to function as a generalist, addressing (frequently) complex clinical cases from several perspectives and/or by taking on variable roles as a clinician. Regardless of intervention or setting, interns learn the unique cultural nuances of living and working in Appalachia, including special considerations for conducting valid assessments, diagnostic interviews, and effective psychotherapy with this population. Cultural sensitivity to the region and its people is nurtured through various didactics and supervision throughout the training year.

Program Description

The Kentucky Department of Corrections Division of Mental Health began its internship in 2010. The Department currently supervises 21,000 adult offenders who are incarcerated in institutions, Class D programs and those under community supervision. Interns will be assigned to four rotations throughout the internship year and will have the opportunity to work with a variety of presenting problems, including but not limited to adjustment disorders, mood disorders, thought disorders, complex trauma, chemical abuse and dependency, anger management, neuropsychological disorders, sexual paraphilias, hyperactivity, and characterological problems. Rotations include three major and one minor at up to four facilities located near one another. Interns will become increasingly adept at assessing and treating such disorders with crisis-intervention, individual and group contacts. An application was submitted on August 15, 2011 to and outlier management, clinical development and involvement in applicable regional/state Committee clinical projects.

Program Description

FMC Lexington is a federal prison medical center. We house male inmates in both general population and medical units. We also have a small satellite, minimum security prison camp for female offenders. Interns are an integral part of our very active Psychology Services Department. Interns spend six months in each of two major rotations. All interns are assigned to General Population where they provide a wide variety of mental health intervention and assessment services for male inmates. Interns also spend six months on one of three elective rotations: Substance Abuse Treatment - This is a residential therapeutic community offering extensive group therapy experience and a strong didactic component. Care Level 3 MH - Interns provide clinical services to chronic mentally ill patients within a specialized environment. Forensic Assessment - Interns collaborate in preparation of assessments of competency and criminal responsibility of defendants for the federal court system. Interns are encouraged to take advantage of opportunities to sample experiences in other training rotations and to work with women at the satellite camp. Interns receive sick and annual leave. Support for research and completion of dissertation are provided. Many former interns are currently employed as Psychologists with the Federal Bureau of Prisons.

Program Description

The VAMC Lexington internship program utilizes the practitioner-scholar philosophy. The internship's experiences are intended to provide the aspiring psychologist with opportunities to practice and expand on previously learned skills, to develop new skills and to experience personal and professional growth. Our belief is that these objectives can best be achieved through comprehensive training based upon the following three principles: 1. Training in a breadth of clinical skills central to the practice of psychology. 2. Training emphasizing content areas relevant to the intern's career goals. 3. Training in the ethical and professional standards central to the practice of psychology. Interns will complete two 6 month major rotations and two 6 month minor rotations. Major rotations are available in the following areas: PTSD Clinical Team (Outpatient), Behavioral Health, Residential PTSD Program, OutpatientMental Health Clinic, Family Therapy Program. Minor rotations are available on the following areas: Behavioral Health, Residential PTSD Program, Rural Outreach, Outpatient Family Therapy, Home Based Primary Care, Administration, and Long-Term Psychotherapy.

Program Description

The overall goals of the training program are as follows: Goal 1: To foster clinical competence as an entry level generalist professional psychologist. Goal 2: To cultivate a commitment to diversity and provision of culturally competent services. Goal 3: To develop knowledge, skills, and ability to implement effective outreach, preventative programming, and consultation. Goal 4: To facilitate competence in supervision Goal 5: To develop scientific and professional knowledge, identity, and ethical integrity as psychologists. The training program will achieve these goals through a combination of training seminars, experiential learning, peer consultation and supervision. The experiential-developmental-apprenticeship training model focuses on the developmental nature of intern growth, and utilizes mentoring, experiential learning, and the integration of scholarly work into practice. An essential component of the UKCC training program is to prepare the interns to integrate scholarly knowledge, research findings, and critical thinking into clinical practice and clinical decision-making as part of their regular practice. We encourage the consumption of scholarly research as well as consultation with supervisors and peers during internship, and with peers while moving toward independent licensure. Seminars include Assessment, Clinical and Professional Issues, Multicultural, Outreach, Supervision, and Case Presentations. Interns will co-lead interpersonal process groups and participate in group supervision of group. Interns will have 2 hours of individual supervision each week as well as attend staff meetings, staff inservice trainings and staff case consultation meetings weekly.

Program Description

The U of L Clinical Child/Pediatric Psychology internship program strives to provide trainees with an intense broad-based training experience in child clinical and pediatric psychology. This exposure to the major areas of child and adolescent practice is designed to allow the intern to choose a career path that can lead to directly entering the workforce or pursuing a postdoctoral specialty. The internship program is based in the Division of Child & Adolescent Psychiatry & Psychology, Department of Pediatrics, University of Louisville School of Medicine. Our outpatient clinic, the Bingham Clinic, is the fourth oldest outpatient psychiatry clinic in the US. Trainee experiences include psychological testing, evaluation, individual therapy, and family therapy. Rotations include outpatient therapy and testing, inpatient pediatric consultation-liaison, integrated pediatric primary care, and inpatient child & adolescent psychiatry. Interns also have a year long minor rotation in emergency room assessment/consultation. Three hours of individual, face-to-face supervision are provided weekly, along with 1-2 hours of group supervision. Several seminars are conducted throughout the year, including year-long seminars on Issues in Clinical Child Psychology and Advanced Child and Adolescent Psychopathology. Populations served are diverse ethnically and socioeconomically, with a majority of Medicaid clientele. Clinical problems/disorders typically include attachment disorders, depression, anxiety disorders, ADHD, learning disabilities, PTSD, adjustment disorders, parenting problems, family stress, developmental disabilities, social skills deficits, autism spectrum disorders, bipolar disorder, psychosis, psychological adjustment to chronic and life-threatening illness and trauma, etc. While active involvement in research is not required, interns are invited to participate in some role with ongoing faculty research initiatives.

Program Description

The consortium is a doctoral internship program in psychology offered by LSU and the Eastern Louisiana Mental Health System. The biopsychosocial and scholar-practitioner models are used. Supervision is developmentally sensitive, interpersonal, and allows for mentoring. Supervisors represent a wide variety of theoretical orientations, and interns are supported in the model they choose. The Program's aim is to train competent generalists. See website. Interns function as team members in the interdisciplinary environment in all rotations. The emphasis of the internship year is on training and service. Due to the depth and breadth of training experiences, interns expand the range of employment options available to them after graduation, enabling them to be competitive in the job market. Interns spend time in a university mental health clinic and a state hospital. Interns provide crisis intervention, individual therapy, group therapy, couples counseling, and psychological assessments at LSU. Students are assisted with anxiety, depression, relationship issues, stress disorders, sexual abuse issues, eating disorders, alcohol and drug abuse issues, and personality disorders. Students presenting with schizophrenia, bipolar disorder, suicidality, and various psychoses are also seen at the counseling center. At LSU, in addition to providing clinical services, interns participate in weekly formal training experiences (i.e., seminars). The rotations within the Eastern Louisiana Mental Health System expose interns to inpatient psychological practice in a forensic settings. Interns are exposed to individuals at the interface between the legal system and the psychiatric system. Interns provide individual and group treatments as well as psychological assessment and participate in treatment team meetings. 70% of time is spent at the LSU site. See our website for complete and updated application information.

Program Description

The Southwest Louisiana Pre-Doctoral Internship Consortium is an organized training program in professional psychology. The internship program is an APPIC member site. Training is postpracticum level. The internship consortium provides structured training experiences with the primary focus on the contemporary practice of psychology requiring an ever-broadening range of skills and competencies in order for practitioners to meet the burgeoning demands of today's society. The program consists of 2000 hours of training and experience. Interns work 40-50 hours a week. At least 25% of the intern's time is in direct patient/client contact (minimum 500 hours).
 The primary training site is Counseling Services of Southwest Louisiana, an assessment and therapy center. Consortium member facilities include area hospitals (adult gero-psychological unit, neuropsychological rehabilitation center), outpatient clinics (psychiatric clinical research, addictions center), and Calcasieu Parish intervention services (juvenile detention/intervention center). Doctoral students in clinical and counseling psychology programs are urged to apply. There are two full-time internship positions available for the upcoming internship year. Under supervision of licensed psychologists, interns provide psychological and neuropsychological evaluation, cognitive rehabilitation, consultation, training, individual, family and group counseling, behavioral interventions, and crisis intervention services in a variety of clinical settings. Training assignments are made to assure that each intern has the opportunity to serve various age, cultural, SES, and minority groups, as well as to provide assessment and intervention to patients with various needs and diagnoses. Special effort is made to provide experience with low base rate disorders and a full range of experiences across the life span (child to geriatric).

Program Description

We anticipate recruiting SIX (6) interns for the 2014-15 training year

PROGRAM OVERVIEW

The clinical psychology internship is a year-long, APA accredited predoctoral program, conducted by the Section of Psychology in the Department of Psychiatry at Louisiana State University Health Sciences Center School of Medicine.

CHILD/ADULT & ADULT TRACKS

Child/Adult and Adult interns will have a year-long placement at LSU Behavioral Health adult inpatient psychiatric hospital. Interns work with a multidisciplinary treatment team providing consultation, group and individual therapy, and brief psychological assessments. Child/Adult interns carry a min. of 6 child/adol/family outpt therapy cases at an outpatient mental health clinic. Four to six adult outpt cases are required for Adult track interns. All interns complete a minimum of 10 full outpt assessment batteries. Electives in areas such as neuropsych assessment with children/adults or HIV+ adults, assessment of ADHD/LD, school-based tx, treatment of trauma are available.

INFANT/CHILD TRACK

The focus of the Infant/Child track is assessment and treatment of children 0-18 years, with emphasis on young children. Half time is spent working with 0-5 age range, & other half with children ages 6-18 yrs. Focus is on relationship-based assessments and treatment of infants & toddlers in the 1st 5 yrs of life. Also emphasize traditional play therapy, & family tx/parenting techniques necessary to work with very young children and their caregivers. Components of the Infant/Child track include: 1)Conducting therapy with referred infants and toddlers and their caregivers; 2)Observing normally developing infants; 3)Providing evaluations for juvenile court; 4)School-based assessment, therapy, and consultation on-site to public/parochial schools; 5)Harris Fellowship didactics and multidisciplinary supervision.

Program Description

Interns work with a diverse group of patient populations. Our objective is to bring together trainees from different institutions and with different training backgrounds to enhance personal interchange and professional stimulation. We train interns only in those clinical settings where our full-time faculty are actively involved. The majority of our intern graduates subsequently complete a postdoctoral fellowship. Our program offers two tracks: Adult Psychology and Child Psychology. Within each track, intern applicants also specify an area of concentration. In the Adult Track, the concentration is either Behavioral Medicine or Forensic. In the Child Track, the concentration is either Pediatric Psychology or Infant Mental Health. Applicants may specify an interest in being considered for either concentration within the Adult or Child Tracks, but they should state a preference. Stated preferences will be used for arranging interviews only and for no other purpose. Two Tracks are offered currently: I. Adult Track (applicants may apply for either or both areas of focus (I.1. or I.2.) Focus 1. Behavioral Medicine - one position available in 2014-2015 APPIC Match Number: 131712 Focus 2. Forensic Psychology - one position available in 2014-2015 APPIC Match Number: 131713 II. Child Track (applicants may apply for either or both areas of focus (II.1. or II. 2.) Focus 1. Pediatric Psychology - one position available in 2014-2015 APPIC Match Number: 131715 Focus 2. Infant Mental Health - two positions available in 2014-2015 APPIC Match Number: 131714 PLEASE CONTACT MS. KARLY HUNTER AT khunter1@tulane.edu IF YOU HAVE QUESTIONS.

Program Description

The Louisiana School Psychology Internship Consortium offers a 12-month (2000 hour), school-based internship experience in South Louisiana. The geographic area in and around New Orleans provides a diverse and culturally rich environment in which to learn. Charter schools and school districts, in partnership with the Human Development Center at LSU Health Sciences Center, provide opportunities to practice in urban, rural and/or suburban settings. The choice of training site (school district) is based on a mutual match between the intern's training goals and the opportunities available in the various sites. Interns spend 80% of their time practicing in the schools and participate in training one day each week. Training consists of both didactic and experiential through our interdisciplinary experiential curriculum. Two hours of individual supervision is provided by licensed School Psychologists who have experience working in the schools in South Louisiana. The peer group provides a strong support network for the challenging internship year. Working toward an interdisciplinary approach in the schools, interns have opportunities to build and expand the skills needed to work effectively with students from birth to age 22, and gain experience working with both regular education students and those with a wide range of various needs. Additional opportunities to work with particular age groups or students with specific characteristics or disabilities often occurs during an experiential rotation. Interns are supported in attending the annual meeting of the Louisiana School Psychological Association and each presents a paper or participates in a symposium. Over 60% of interns who have trained with the consortium have stayed in Louisiana for a second year and may obtain post-doctoral supervision in preparation for licensure.

Program Description

We offer and implement competency-based professional psychology training, within a rural psychology context, in accord with a scholar-practitioner model. We aim to train ethically grounded, culturally aware generalists who can thoughtfully apply evidence-based psychological assessment, treatment, and consultation skills for the benefit of persons and organizations, particularly within a rural environment. Training consists of 2080 hours in three full-time four-month rotations and one part-time year-long rotation, including available out-placements up to 346 hours. We are located on spacious wooded grounds five miles east of Augusta, the state capital of Maine.

Program Description

The Pre-doctoral Internship program offered by the Department of Psychology at Riverview Psychiatric Center is designed to provide an intensive professional training experience in acute and chronic inpatient psychiatric care, consultation services, and community re-entry programs. The primary goal of the internship is to help develop competent and skilled clinical psychologists. RPCs internship standards are based on APPICs policies and guidelines. Major rotations for all interns include acute inpatient psychiatry; psychological assessment and consultation; forensic assessment and treatment; group psychotherapy; and individual psychotherapy. Interns work with senior psychology staff as part of multi-disciplinary teams on treatment units and as full colleagues in the professional activities of the department. Interns will be exposed to a comprehensive treatment model, collaborating with medical doctors, social workers, nurses, and psychologists. The internship is individualized to meet the needs and skills of each intern and offers options that may include a rotation on the forensic outpatient Assertive Community Treatment (ACT) team. Interns may participate in hospital research, scholarly writing, or the development of training programs for in-service education or community presentations. In addition to Psychology Department seminars and case conferences, interns participate weekly in Dartmouth Medical School Psychiatry Grand Rounds via interactive teleconferencing. RPC Psychology Department welcomes doctoral level graduate students in clinical/counseling psychology programs. The program runs for 12 consecutive months, and requires 2000 hours of training. Interns work approximately 40 hours per week. A minimum of two hours of individual supervision and two hours of group supervision is provided weekly. A stipend of \$15,000 is provided.

Program Description

The internship consists of training opportunities at Westside NeuroRehab (in Lewiston) and Bayside NeuroRehab (in Portland). The interns will work with transdisciplinary treatment teams providing services to people with a wide range of neuropathology and comorbid conditions. The programs have many different brain injury professionals and ample learning opportunities for interns. Interns have the opportunity to participate in the supervised administration of neuropsychological test batteries, learn case conceptualization, enhance report writing skills, make appropriate recommendations, develop treatment plans, and implement therapeutic interventions. Additionally, interns are encouraged to participate in weekly didactics, brain injury research projects, and activities of program development.

Program Description

Our program is designed to provide intensive professional training experience within an active service-oriented agency. While broad exposure to a variety of clinical activities and delivery systems is advocated, a genuine commitment to intensive supervision and the furthering of the intern's personal and professional growth exists as the foundation of our program. We have a strong commitment to fostering skills in prevention education and community development and a staff well trained in group work. We adhere to a practitioner/apprenticeship model. As a staff, we try to model solid professional practice, while also demonstrating sensitivity, dedication and a sincere commitment to the intern's development. Special attention is paid to an intern's individual needs and preferences. There may be an opportunity to do an external rotation during the summer depending on negotiations with local agencies and hospitals.

Program Description

The Departments of Behavioral Psychology and Neuropsychology provide assessment and treatment services for a variety of pediatric populations and their families and offers training programs at several educational levels. Our training program provides training in applied behavior analysis, developmental disabilities, behavioral pediatrics, pediatric neuropsychology and family therapy. The Departments' philosophy is that the principles and procedures of behavioral science form the basis for effective and ethical clinical services. The Departments strive to provide a model of applied behavioral science in a pediatric medical setting by developing and evaluating the application of behavioral science and technology in health care services for children through its service, training, and research programs.

The philosophy of our internship program is to prepare students to function not only as psychologists in a variety of settings, but also as members of a multidisciplinary team providing health related services to children and their families. Training occurs through supervised experiences in inpatient hospital units and outpatient clinics. Interns completing our program are well qualified to enter clinical, medical or academic settings.

Program Description

Our program's primary educational goal is to provide interns with a comprehensive and structured set of research-informed, clinical, and didactic experiences that prepare them for a wide range of research, policy-making, and clinical roles in psychology. Our training activities are based in the scientist-practitioner model of training located in an integrated health care delivery system that gives interns awareness of current developments and challenges in mental health care. Interns work side-by-side with faculty and staff in interdisciplinary teams to develop the skills and knowledge necessary to respond to an ever-changing health care environment. To achieve the training goals, interns spend 40 to 60% of their time in direct patient contact, receive a minimum of four hours of supervision each week, attend three hours of seminar per week, and may spend approximately six hours per week engaged in non-dissertation research activities. The following training tracks are available at our Consortium: VA-based PTSD, VA-based health psychology, VA-based adult neuropsychology, VA-based serious mental illness, VA-based comprehensive adult psychology, school mental health, early childhood school mental health, adult community psychiatry and child/adolescent psychiatry. More detailed information about our program can be found in the brochure on our website.

Program Description

The purpose of the internship program is to train practitioners who are interested in developing competence and confidence for work as psychologists in a comprehensive university counseling center or other outpatient mental health setting. The training experience includes the supervised practice of intake evaluations, individual psychotherapy, group therapy, crisis intervention (including daytime and after-hours on-call services), consultation and outreach to the university community, and peer supervision with fellow interns. Other opportunities include alcohol and drug assessment and treatment, and the development of preventive programs and interventions for issues or populations of the intern's own interest. Training staff interests and the diverse composition of the student population necessitate interns utilizing a multicultural perspective. Individual supervision is a cornerstone of the program. Interns receive two and a half hours of clinical supervision per week from a primary supervisor who is a licensed psychologist. A primary supervisor is appointed by the program for the first half of the year based in part on information provided by interns. Interns assist in selecting a different supervisor for the second half of the year. Interns have secondary supervisors for group therapy and outreach experiences. Additional clinical supervision is available as necessary. In addition to individual supervision, interns meet with a clinical staff member weekly for one and a half hours in a group format to discuss cases and provide peer supervision to each other. Interns also participate in weekly seminars throughout the year focusing on topics that are relevant to clinical practice in a university counseling center. Interns meet in a support group with the Center social worker for one hour per week.

Program Description

The major goal of our internship program is to contribute to the development of well-rounded and competent pediatric psychologists. This is accomplished by helping interns develop a solid base of skills in the areas of assessment, intervention, and consultation, as well as facilitating the acquisition of specialized skills with a wide range of pediatric populations. We have designed our program to achieve this goal, and we have developed site-specific goals and objectives for our interns that are consistent with our training mission. Mt. Washington Pediatric Hospital is a rehabilitation and specialty hospital that is part of the University of Maryland and Johns Hopkins Medical Systems. Interns in pediatric psychology receive training in inpatient consultation-liaison with patients with medical conditions, outpatient psychological testing and therapy, assessment, therapy and consultation with patients with feeding disorders (inpatient, outpatient, and feeding day program), diabetes (via close work with our multidisciplinary team) autism, and childhood obesity. Interns receive training in individual therapy, group therapy, family therapy, parent training, and interdisciplinary team consultation. Interns work with patients in our inpatient, outpatient, and day treatment programs who present with a wide variety of medical, developmental and behavioral problems. Interns work with pediatric populations from infancy through adolescence, including some work with young adults, as well as extensive experience in parent training. A number of seminars provide interns with didactic experience in the broad core areas of training, as well as in a variety of specialized areas. Throughout the year, interns work with patients from many different backgrounds, and issues of diversity are addressed in didactic training and in supervision. Upon completion of our internship program, graduates are equipped to pursue positions in a variety of settings.

Program Description

The Counseling Center at UMBC offers a one-year, full-time internship within a highly diverse university setting. Based on the Practitioner-Scholar model, the internship offers training and experience in intake assessment, individual and group therapy, crisis management, outreach, consultation, and supervision. The primary focus of the internship is on developing counseling skills for short-term individual and group therapy with an emphasis on multicultural competency. Interns can expect to have 3-4 intakes, 10-12 individual sessions, and 1 therapy group per week. Interns receive 4-5 hours of supervision by licensed psychologists. An average of 3 hours of didactic training per week is provided, including Intern Seminar, Case Consultation meetings, and other professional development programs, including Case Conference. Interns are given progressively more challenging clinical responsibilities and autonomy over the course of the internship. For example, interns begin covering day-time emergencies and providing consultation to parents, faculty and staff in the Fall semester. By the Spring semester, they will also cover after-hours emergencies. Interns have the opportunity to clinically supervise practicum students and meet for Supervision of Supervision meetings. Interns meet monthly with a Community Director in a consultative relationship. Outreach opportunities include presenting Skills for Success workshops on topics such as Stress Management and Test Anxiety and then training practicum students to present them. Other outreach programs include mental health screenings and presentations to campus groups on mental health topics. Interns are required to complete an Intern Project, which will present an opportunity to further develop a particular area of interest for each intern. Training in career counseling and alcohol and other drug assessments is available. Throughout training at the Counseling Center, the emphasis is on developing and enhancing clinical and professional skills in an ethical, legal, and culturally competent manner. We are actively seeking APA accreditation.

Program Description

US ARMY INTERNSHIP. The model stresses exposure to multiple theoretical orientations and techniques. Rotations include Outpatient, Primary Care, Basic Elements of Cognitive Evaluation, and Assessment. The outpatient rotation involves supervised interview assessments and short-term treatment-cognitive-behavioral, short-term dynamic, group therapy and other techniques. Training in military specific evaluations and PTSD treatments are also provided. The primary care rotation is embedded within the medical clinic and involves brief evaluations of medical patients with recommendations and interventions aimed at symptom reduction and functional outcome. The assessment rotation involves personality testing [Objective and Projective measures] for diagnosis, treatment planning and disposition. The basic elements of cognitive evaluation rotation involves an introduction to cognitive assessment principles, basics of traumatic brain injury evaluation, and exposure to acutely injured polytrauma patients. A long-term individual case is carried throughout the year with weekly supervision. A range of seminars are presented. Seminars range from 3 hours to two-day workshops and may include Rorschach, MMPI-2, MCMI III, PAI, Psychodynamic Theory and Practice, Assessment and Treatment of Suicidal Patients, Family Therapy, Models of Group Therapy, Ethics, Operational Psychology, Introduction to Neuropsychology, Cognitive Remediation of Brain Dysfunction, Psychotherapy and Neuroscience, Cultural Competence, and Dialectic Behavioral Therapy. The internship faculty recognizes that it is essential to begin at each intern's level of professional development and provide opportunities through which existing skills can be refined and new skills assimilated. The goal of this internship is to train clinical psychologists who are capable of functioning with professional autonomy in a variety of applied settings in the Army. The Navy and Army Internship programs will maintain separate APA accreditation, but be co-located at Walter Reed National Military Medical Center in Bethesda, Maryland.

Program Description

The APA-Accredited internship program at Spring Grove Hospital Center (SGHC) is a generalist psychology pre-doctoral internship which employs a practitioner-scholar model of training. There is an emphasis on incorporating evidenced-based/empirically validated clinical skills with a diverse SMI inpatient adult and adolescent population. There are two primary clinical rotations over the course of the year. Possible rotations include: Admissions- adult or adolescent and Continued Care-adult. Opportunity for enhanced/specialized training one-day per week (e.g., pre-trial forensic evaluations, substance abuse) is available during the second rotation. While forensic populations are dispersed throughout the hospital the primary focus is on general clinical services (i.e., psychological assessment, individual and group interventions). Didactics include cultural diversity, supervision, and evidenced-based cases, it is not uncommon for interns to continue to provide psychotherapy in some cases across rotations, with supervision from a licensed psychologist throughout the course of psychotherapy. Finally, didactic training opportunities in a variety of areas provide exposure to numerous topics, including mental health case law, forensic psychological assessment techniques, psychopharmacology, and cultural diversity. The twelve staff psychologists are licensed, and all participate in the supervision of interns. Staff members represent a variety of theoretical paradigms and supervision styles.

Program Description

Our internship program provides training experiences for individuals interested in pursuing employment and careers in a college or university counseling center setting or teaching as a member of a university faculty in the field of psychology or counseling. The scientist-practitioner training model serves as the over-arching educational philosophy of our internship program. We ascribe to a scientist-practitioner philosophy and we use an apprenticeship method to accomplish this training. The internship involves the provision of individual and group counseling, outreach and consultation, supervision of practicum students, alternative treatment modalities, research and program evaluation. Participation in staff meetings, committees, case conferences, seminars, and involvement in administrative functions is expected and encouraged.

Program Description

Malcolm Grow Medical Clinic (MGMC) is a scientist-practitioner program offering exceptional training and unparalleled benefits. Extensive training and experience is provided in empirically based assessment and intervention methods within required rotations in adult outpatient mental health, clinical health psychology, primary care integration, basic neuropsychological assessment, and substance abuse. Interns also gain experience in emergency on-call consultation and complete two elective rotations including options such as advanced biofeedback or neuropsychology, personnel selection, virtual reality assisted treatment, research, and dedicated dissertation work time (required if dissertation not completed). Extensive supervision is augmented by weekly didactics, case conferences, journal clubs and several 1-2 day workshops conducted by nationally recognized experts (see internship brochure for list of previous experts). MGMC trains generalists to conceptualize problems from a biopsychosocial perspective and solve them utilizing scientific thinking. An overarching vision of our program is to transition interns from students to autonomous professionals. We emphasize competencies in the efficient (short-term, cost-effective, high quality) delivery of clinical services to our base population. In addition, interns gain an extensive understanding of military and deployment related psychology. All interns' clinical and consultation services support a broad range of military patients and beneficiaries, health professionals, units and the community. The military provides a rich exposure to people and patients from diverse cultural and ethnic backgrounds, further enhancing the training experience. Interns begin active duty service at the rank of Captain and have a 3 year post-internship commitment (a guaranteed job with moving costs paid!) in which they continue to develop as professionals and officers and receive annual pay increases.

Program Description

JLG-RICA is a community based residential and day treatment center for seriously emotionally disturbed children and adolescents ages 11-18. We have been fully accredited by the Joint Commission on Accreditation of Healthcare Organizations (JCAHO) since 1981. We are an interagency program operated by the State of MD in partnership with Montgomery County Public Schools. We offer milieu, individual, family, and group therapy and a fully-accredited Special Education school, with academic and vocational programs. The clinical staff is comprised of 5 psychiatrists, 10 psychologists, 4 licensed clinical social workers, and 4 expressive therapists. In addition, we have a large staff of registered nurses and residential counselors. JLG-RICA is highly committed to the training of doctoral interns in psychology. The training model used to achieve this goal closely fits the practitioner-scholar model. Accordingly, interns are treated as professional colleagues who are expected to function as "primary" clinical therapists and fully integrated members of their respective treatment teams. They are guided and supported throughout their internship year by intensive supervision, mentoring, and a planned sequence of relevant training activities. Interns are exposed to the role of psychologists as scientist-practitioners through their involvement in a year-long clinical research or program evaluation project. The scholarship component of the training model is manifested through the didactic seminar series, the intern research project, and immersion in evidence based theory of clinical practice as well as other disciplines of psychological and behavioral intervention.

Applicants must be enrolled in an accredited psychology doctoral program. 500 TOTAL face to face AAPI hours required. 1 testing report required with AAPI. Background check and pre-employment physical/TB test required at hire. Illegal substance testing if reasonable suspicion once hired.

Program Description

The internship is based on the Practitioner-Scholar model, and is designed to prepare entry-level psychologists who practice ethically and with sensitivity to diversity. Training goals include knowledge of theories, research, and methods of psychology related to models of psychotherapy, assessment, supervision, evaluation, and consultation. Rotations are offered on admission and long-term care units within the hospital. Interns may spend 1 day per week during the internship year at an outplacement. The program employs diverse didactic training to complement the clinical work performed by the intern. While we offer a generalist training program, the majority of current admissions are patients with forensic involvement. Group therapy is a primary treatment modality in the hospital. All interns conduct comprehensive psychological assessments.

Program Description

The Counseling Center functions on a contract system, allowing each intern to establish an individual contract to reflect training expectations. We believe that this system enables the intern to learn about and seek a balance between the various roles and functions of the developing psychologist, maintain a sense of priority regarding professional/personal demands, and allow individualization of emphasis. The activities are divided into core components and electives. Examples of core components include: individual and group counseling, intake and crisis intervention, providing supervision, intern seminars, outreach and consultation, and research. Electives include full apprenticeship opportunities, where interns can work closely with a Counseling Center staff member and learn more about their role (e.g. training director, clinical director, multicultural coordinator, etc.) or can choose electives instead in an "a la carte" fashion. Examples of possible a la carte elective opportunities (some of which would also be included in an apprenticeship where appropriate) include: specialized training in substance abuse counseling (beyond that provided through the core experiences), administrative opportunities including participation on the Center's Diversity Committee or Intern Selection Committee, additional research (beyond that provided through the core experiences), teaching an undergraduate Personal Life and Career Planning class, etc. Additionally, interns may develop their own ideas for electives in consultation with the training director. Intensive supervision is provided for all activities, core or elective.

Program Description

Our training philosophy is focused on developing highly competent clinical practitioners in a university-based managed care setting. Our goal is to produce very competent multi-modal practitioners who will successfully transfer treatment skills to a variety of outpatient settings within the rapidly evolving world of health care. The core of this model lies in the mentor-apprenticeship supervisory relationship. Intern applicants would fit well here if they are prepared for, and interested in, a therapy-intensive, multiculturally sensitive environment, crisis assessment, training with multidisciplinary senior therapists and treating the full range of psychiatric diagnoses. The strengths of this internship include training in brief individual, couples and group therapies, behavioral medicine, crisis intervention, CISD, psychological testing and community consultation. Our staff has been together for many years and is very supportive of interns' growth and creativity.

43- 24 hour oncall shifts (where trainee must be within 20 mins of University), occasionally nights and weekend outreach required

Program Description

FMC Devens is a 1,100-bed federal prison that houses adult male inmates. Psychology staff provide services for inmates with severe mental illnesses undergoing inpatient and outpatient mental health treatment, inmates with chronic medical problems, inmates with substance dependence and abuse problems, defendants referred by the federal courts for forensic evaluations, inmates participating in an intensive residential sex offender treatment program, and inmates mandated for sex offender management services. The goal of our predoctoral internship program is to train entry-level professional psychologists who function competently in a correctional environment. Our program subscribes to the Practitioner-Scholar model of training and therefore emphasizes direct service training opportunities. Our internship year is divided into three four-month trimesters, which affords interns the opportunity to gain experience with every population served by the Psychology Department. Interns complete two full-time and two part-time (part-time rotations occur simultaneously) rotations over the course of the training year. Available rotations are as follows: Severe and Persistent Mental Illness, Forensic Assessment, Sex Offender Management/Treatment, and Drug Abuse Treatment. Within rotations and other training activities, interns gain experience with psychological assessment tools, documentation and report-writing, intake/mental health screening and triage, suicide risk assessment, crisis intervention, individual therapy, group therapy (both psychoeducational and process), sexual assault prevention/intervention, and consultation with other disciplines. In addition, interns have the opportunity to provide clinical supervision to practicum students (typically 1st, 2nd, or 3rd year doctoral students). Two weekly didactics focus on correctional and clinical psychology, mental health case law, clinical case presentations, and the treatment and management of sex offenders.

Program Description

The internship program integrates clinical training in three content areas: psychotherapy; assessment and evaluation; and a specialty rotation. Specialty rotations occur in the following areas: outpatient therapy, psychosocial rehabilitation, geropsychology, addiction treatment, and neuropsychology. Staff represent a range of therapeutic orientations (integrative, cognitive-behavioral, psychodynamic, and experiential) and research/clinical interests. The internship program benefits from a broadly comprehensive array of treatment venues available to the veteran. Specifically, the Psychology Service and its internship program are actively involved in all of the following clinics and services:- Acute inpatient psychiatry unit;- Substance abuse intensive day treatment and outpatient services- Hospital-wide smoking cessation program- Compensated Work Therapy, the largest in the VA system- Four-month "Domiciliary treatment- Six-month community-based Transitional Residence Program - Center for Psychotherapeutic Change, directed and staffed by Psychology Service, offering introductory and advanced groups as well as individual and couples psychotherapy- Six community-based outpatient clinics- Mental Health Outpatient Clinic- Psychology Assessment Center- Five nursing home care units- A thirty day 20-bed Geriatric Evaluation and Management unit Psychology staff direct five of the above services, and three other programs that were awarded the 1999 VA Undersecretary of Health "Innovations in Service Delivery". Additional opportunities exist for both program development and consultation training. A Psychology-run Mental Illness Research, Education and Clinical Center (MIRECC) offer interested students a number of opportunities to become involved in research. Frequent seminars, grand rounds and other didactic training opportunities round out the training.

Program Description

The primary objective of the Boston Consortium is to provide a comprehensive predoctoral training program that assures the development of adequate levels of proficiency across the basic core competencies of clinical psychology including assessment, behavior change and psychotherapy, consultation, attention to issues of diversity, professional ethics, and scholarly inquiry / clinical research. We view the internship year as critical in the transition of the individual from graduate student to professional psychologist. We encourage the development of a professional identity, professional values, and a professional demeanor along with these competencies in the practice of psychology. The expectation is that by the end of the training year, an intern will be able to function competently and independently (i.e., entry level practice or better) in the core competencies, listed above. Within the training program, general skills are emphasized. However, when feasible and appropriate to training needs, the development of specialist skills also is encouraged. We provide training in professional psychology in the following rotations for 2013 - 2014: Clinical Child Psychology; General Mental Health; Ctr for Returning Veterans (OEF/OIF); Adult Trauma - (Behavioral Sciences Div. and Womens Health Sciences Div. of the National Ctr for PTSD); Medical Psychology / Behav Med; Substance Abuse Treatment Programs Resid & Outpt; Dual Diagnosis (PTSD/Substance Use Disorder); Inpatient Mental Health - Therapeutic Recovery; Neuropsychology; Geropsychology; Rehabilitation Psychology; Our rotations are located at the Boston Medical Center (Child rotation); VA Boston Healthcare System - Brockton, Jamaica Plain (Boston), and West Roxbury campuses; plus, a child clinical externship at Boston University (Center for Anxiety & Related Disorders). Our internship is a member of the Academy of Psychological Clinical Science (APCS), and we encourage applications from APCS programs.

Program Description

Seeking applicants who have strong academics in clinical or counseling psychology and a demonstrated commitment to working with diverse populations/multicultural psychology. Our aim is to train leaders in the field of multicultural psychology. Our training is oriented toward the culturally competent practice of professional psychology. CMTP utilizes the APA mentored-practitioner-scientist training model. Through this model, we provide mentoring, dissertation/research support-related activities(i.e. didactics), access to Networks of multicultural psychologists and others, inpatient and outpatient (child and adult) placements sites, forensic placements, medical/mental health interface (behavioral medicine) and community-based experience. Focus on evidence-based practices. CMTP has a 40+ year history of training leaders in the field of multicultural psychology. For additional information, please see our Web-site atCMMH-CMTP.org, or you are welcome to email (cmtmp@bmc.org) or call (617-414-4646) for Program Description and Overview. Thank you for your interest in CMTP.

Program Description

Internship represents the first year in a two-year training track; the second year is a postdoctoral fellowship that provides additional training in our areas of specialization and hours toward licensure. —We want applicants who want a two year experience (note that you must complete your degree and internship to participate in the postdoctoral fellowship).

Internship at the Danielsen Institute at Boston University is a one-year full-time program focusing on the development of clinical skills (psychotherapy, assessment, case consultation) and the integration of psychological perspectives with religious/spiritual/existential perspectives. The primary theoretical orientation of the training program is psychodynamic, with an emphasis on relational theories and approaches, but also drawing from multicultural perspectives, religious/spiritual/existential traditions and perspectives, developmental theories, and neuroscience. The internship is based upon a reflective practitioner model of training which emphasizes critical, collaborative reflection upon clinical activities and attention to personal formation in addition to knowledge and skill development. Interns will be asked to reflect upon their personal history and identity as relevant to developing their capacity to work effectively with issues of identity and diversity.

Program Description

The HMS/MGH Psychology Internship offers generalist training within five elective areas: Adult, Child, Neuropsychology, Cognitive-Behavioral Therapy and Behavioral Medicine. The program adheres to the scientist-practitioner model of training and therefore, interns participate in a range of training experiences oriented towards fostering their knowledge of clinical practice and research.

Program Description

The Massachusetts Mental Health Center (MMHC), affiliated with the Harvard Medical School Department of Psychiatry at the Beth Israel Deaconess Medical Center Department, is both a DMH mental health facility and an academic center of excellence, combining public service with outstanding clinical and research programs. The program aims to develop reliable competencies in evaluation and treatment planning, psychotherapy, and psychodiagnostic testing through supervised clinical experience, seminars, and relevant readings. This training requires a substantial time commitment to the core curriculum for psychology interns in the Psychology Department as well as two half time clinical placements. Applicants may apply to any of three tracks: 1) General Track: the MMHC Partial Hospital, DBT and CBT teams. 2) Prevention and Recovery in Early Psychosis (PREP) program, working with young people (ages 16-30) who have recently developed a psychotic disorder. 3) Neuropsychology: Neuropsychological assessment at the MMHC and the BIDMC Department of Psychiatry. All interns are assigned to one of the outpatient teams serving adult DMH patients including specialized treatment in DBT and MI/PSB (Mentally Ill people with problematic sexual behaviors) as well as the Southard training clinic serving higher-functioning members of the community. Psychology has substantial representation at MMHC. There are the members of the internship faculty, the clinical psychology interns and fellows, the psychologists on the clinical and administrative staff, and other psychologists engaged in research. Psychologists enjoy mutually respectful and responsible relationships with other mental health professionals. The program is located within a community of remarkable cultural diversity, including African Americans, Asians, Southeast Asians, and Hispanics from many different countries. It attempts to recruit interns and faculty to reflect that diversity.

Program Description

The internship at The Cambridge Hospital prepares doctoral candidates to understand and treat persons suffering with a broad spectrum of emotional distress. The curriculum emphasizes a biopsychosocial approach to the understanding of people. Our multidisciplinary faculty teaches trainees about psychodynamic, developmental, and relational principles through didactics and comprehensive individual and group supervision. With close faculty-trainee interaction, we provide a solid grounding in psychodynamic, relational, developmental theories and integrative (cbt, dbt, mentalization-based) approaches that stress the understanding of ethnic and cultural influences. We also teach interns clinical formulations and to integrate a variety of treatment modalities while working with persons with an array of psychological problems, including persons diagnosed with major mental illness and severe personality disorders. Applicants must select a "track" to which to apply: Adult/Acute Services Track, Adult/Child Outpatient Services Track, Adult Asian Team or Latino Team/Acute Services Track or Adult Asian Team or Latino Team/Child Outpatient Services Track. In the coming year, we will have a ninth internship position (CHA/Weill Foundation Intern) which requires 75% clinical time in child outpatient services and 25% clinical time in adult outpatient services. Psychology is a Division of the Department of Psychiatry, and we strive to provide comprehensive mental health and addiction services to traditionally underserved populations. Our affiliation with Harvard Medical School has brought together a community of talented trainees, and accomplished faculty. We aim to train leaders for the profession of Psychology and emphasize attention to the larger context in which treatment is offered and accepted. We also have an affiliation with the Austen Riggs Center. Interns participate in two intensive learning experiences at the Austen Riggs Center in Stockbridge, MA.

Program Description

Comprehensive Outpatient Services, Inc. is an outpatient community mental health agency. We have clinics with small and dedicated staffs with many clinical talents and areas of expertise. We work with clients of all ages, with a wide range of diagnoses. Our clients include many children and families, as well as adults. We have a unique emphasis on staff working together as a collaborative community. We have had training programs for doctoral level interns since 1990. The internship training program is committed to developing mental health clinicians who are competent in the assessment and psychotherapeutic treatment of individuals, couples, and families. Interns maintain a caseload of clients, and are expected to spend approximately 50% of their time in direct contact with clients. Formal training seminars are: 1 hour/week child psychotherapy seminar, 2 hours/week Advanced Clinical training covers a number of topics, including ethics, substance abuse, trauma, and couple therapy. 1 hours/week staff meeting which includes in-service training and case presentations. TRAINING AND SUPERVISORY STAFF: Cathy Auth, LICSW, Child Seminar instructor, ongoing. Meredith Kassoy, PhD, Licensed Psychologist, Director of Training, supervisor, seminar instructor, ongoing. Jim Barron, Ph.D., Licensed Psychologist, supervisor, ongoing. Bruce Mermelstein, Ph.D. President COSI, Licensed Psychologist, supervisor, ongoing. Marlene Davis, Ph.D., Licensed Psychologist, supervisor, 2011-12 and prior years. Irene Bryan, Ph.D., Licensed Psychologist, supervisor, 2012-13.

Program Description

The Internship Program is divided into two distinct tracks: Child and Adult. Interns in each track have two placements. Interns in the Adult track have an outpatient and inpatient placement. The latter at McLean Hospital SouthEast (a private Psychiatric facility). Projective testing experience (specifically, the Rorschach) is necessary in all internship positions. Interns in the Child track have an outpatient placement and either an adolescent inpatient placement (ART at McLean Hospital SE), a placement in a school based educational collaborative, or a placement at the In Home Therapy Program, which is a flexible support program for children and adolescents with serious emotional problems. Projective testing is most necessary for work in the ART, whereas the educational collaborative requires more cognitive and achievement testing experience. The In Home Therapy Program has the least amount of testing opportunity. All interns are required to complete a minimum of 6 testing batteries with integrated reports in order to graduate from the internship. Beginning in 2013 there is also an Early Childhood Track which also consists of 2 half-time placements: one outpatient and one in the Step One Early Intervention Program working with infants with delays from birth to age 3.

Program Description

Scientist-practitioner training program with strong emphasis on behavioral approaches and intervention that is guided by empirical literature. Number of training tracks open. Applied Behavioral Services track provides training opportunities in applied behavior analysis, ABA research, brain injury, autism, and child and adult MR/DD. Behavioral Health Services track provides training at a couple of outpatient clinics serving a range of severity, presentations, and ages. One clinic specializes in adolescent and family presentations and outreach. The other clinic specializes in general outpatient with more severe client?x9Fx92????le and cross-cultural population. Pediatric Health Services track provides training in a community-based outpatient hospital program focusing on pediatric and child psychological services. National Autism Center track provides training in an Autism Spectrum Disorders assessment clinic serving children 18months to 21 years of age. We value the training we provide and are committed to making the May Institute a career path for the interns who are trained in our program. Strong behavioral, research, and empirical orientation preferred. Behavioral and applied behavior analysis experience, presentations or publications ideal. Psychodynamic orientation not a strong fit.

Program Description

Devereux MA provides residential treatment and educational services to seriously emotionally and behaviorally disordered children ages 9 to 21 years-old. Interns receive supervision in individual, family, and group treatment, psychological testing, and consultation with residential, educational, and nursing staff. Interns play a leadership role on multi-disciplinary treatment teams, conduct functional behavioral assessments, and design individualized behavior plans. The internship program focuses not only on developing the intern's clinical assessment and treatment skills, but also on teaching the intern how to effectively navigate both the internal and external systems that impact our clients' lives. The foundation of our overall approach to residential treatment is a therapeutic milieu that is a safe, predictable, empathic learning environment. We use a blend of positive behavioral support and relational approaches to create an environment in which clients can develop new social and communication skills to replace problem behaviors. Residential, clinical, educational, and medical staff work together to create an integrated therapeutic environment. Our theoretical orientation to clinical work is cognitive-behavioral, integrated with concepts and strategies from relational and family systems approaches. Since many of our clients have a history of trauma, our work is informed by a trauma framework based on recent empirical findings about the neurodevelopmental effects of abuse and neglect. Historically, the primary placements for interns have been in the Boys' Program and Girls' DBT Program. However, interns may have the opportunity for a primary placement in one of our specialty program areas that include the Integrated Treatment Unit (comorbid axis I and substance abuse diagnoses) and the Pervasive Developmental Disorder program. Please see www.devereuxma.org for additional information

Program Description

The Multicultural Psychology Internship Program is a training site based in a community mental health center serving primarily a minority population (Latino/as). Our primary mission is to provide services that are clinically-sound, culturally-responsive, and linguistically-appropriate. Supervision is offered from numerous perspectives, including cognitive behavioral, family systems, psychoanalytic, and dialectical behavior therapy. The client population covers the full spectrum of ages and diagnostic categories. Many of our clients have a history of trauma. Interns are expected to participate in a weekly training seminar which include didactic instruction and case presentations throughout the year. Interns also participate in the weekly Multidisciplinary Team Meetings and the Family Reflecting Team, which tend to focus on challenging cases in the clinic. Supervision is offered in weekly individual and group meetings for all psychotherapy cases and psychological testing assignments. The clinic and internship program staff strive to maintain a respectful and supportive training environment.

Program Description

CSI provides high quality services to ethnically diverse and economically disadvantaged children, adolescents, and families. Most CSI clients have experienced psychological trauma related to child maltreatment, domestic violence, or exposure to community violence. We are single-mindedly obsessed with The Other as a clinical discipline, and guided by Anna Freud's notion of The Best Interest of the Child. Interns provide clinic, school and in-home outpatient psychotherapy services. CSI's philosophy embraces the local clinical scholar-practitioner model of training, aiming to integrate current research and best-practices with community-targeted clinical services. CSI emphasizes understanding the eco-psychological context that impacts families, including prejudice and oppression. Interns are engaged in the integration of care through interdisciplinary collaboration & consultation-both inside and outside our agency-with psychiatrists, pediatricians, social workers, mentors and school personnel. Our agency emphasizes psychodynamic thinking but faculty is intentionally eclectic in theoretical orientation, creating a stimulating learning environment. Trainers are supportive and emotionally available, modeling honesty and directness. CSI wants Interns to grow as people, and to tolerate the ambivalence generated by working with this multi-challenged population. We expect interns to advocate not only for their clients, but also for themselves, in an effort to meet their learning needs. Our goal is to graduate client-oriented, self-reflective, emotionally intelligent and humble psychologists who are multi-culturally competent and sensitive to ethno-cultural countertransference. CSI offers a unique opportunity to apply to an international team currently studying school violence; During the 2012-13 year study takes place in Jamaica during the late winter. Spanish-language fluency and interest and/or practicum experience w/children and families is desirable.

Program Description

Tewksbury Hospital is a 339-bed public health hospital for chronic medical disease and neurological conditions. In addition, it also has a 116 bed inpatient psychiatric unit for seriously and persistently mentally ill adults. It is located on a large public health state hospital campus in a Boston suburb. On the seven medical units, clinical training activities are provided for patients experiencing psychological disorders/stress in combination with traumatic brain injury, stroke, Huntington's disease, multiple sclerosis, dementia and other chronic neurological and physical diseases. The stay for many of the patients on these units is long-term. On the four intermediate care mental health units, patients are typically admitted due to civil commitments transferred from brief private hospitalizations who have serious and persistent mental illness and comorbidities, and some criminal forensically involved patients who may also need evaluations from Courts as well as further treatment. Psychodynamic, cognitive behavioral, supportive therapy, cognitive rehabilitation and other supervision for individual and group therapy are the focus. Neuropsychological and psychological consultation and assessment. Predoctoral Clinical Internship Training program, APA-Accredited. 2000 hours. This internship site agrees to abide by the APPIC policy that no person at this training facility will solicit, accept, or use any ranking related information from any applicant.

Program Description

The overarching goal of the Doctoral Internship in Professional Psychology is to prepare interns to develop a knowledge base, skills, and attitudes which will further their development as competent and ethical psychologists, with a special understanding of the mission and concerns of community mental health. The training model that we subscribe to has at least 3 dimensions: 1) competency-based / developmental, 2) practitioner-scholar, and 3) multiple roles.

1) The developmental model: In terms of the professional development of psychologists, we believe that the internship serves a vitally important function in facilitating the transition from doctoral student to psychologist. 2) The practitioner-scholar model: Our training program is based on a practitioner-scholar model. We place practitioner first to reflect our priority in training interns to be competent, first and foremost, in clinical practice, including assessment, treatment planning, and intervention. We train our psychology students in a number of evidence-based treatments, including Dialectical Behavior Therapy (Linehan), Panic Control Therapy (Barlow), Relapse Prevention (Marlatt), Motivational Interviewing (Miller & Rollnick), OCD (Foa) and PTSD (Resnick). With our emphasis on psychotherapy integration, we strongly encourage interns to value and draw on a multiplicity of theoretical perspectives to guide their clinical work (including cognitive, behavioral, narrative, systemic, humanistic, and interpersonal) and to find their own blend or integration. 3) Multiple roles: The third precept upon which our training is based is the strong conviction that current and future psychologists need to be trained in multiple roles (Peterson, Peterson, Abrams, & Stricker, 1997) and to develop both foundational and functional competencies (Rodolfo et al., 2005). Although our primary emphasis is on training in individual and group psychotherapy with adults, our program also provides training in assessment, clinical supervision, training/consultation, & program evaluation. We take a team approach to treatment and you will participate on two or more teams (e.g. DBT, Diagnostic / Treatment Team).

Additional Information About Training Opportunities

Given the population seen in our CMHC, you will have supervised experience working with people with a broad range of problems and disorders - from adjustment problems to persistent mental illness and severe personality disorders. Also, we provide a substantial amount of training in working effectively with clients with co-occurring mental health and substance use disorders, as they applies to 30-50% of the clients we serve.

Program Description

APA accredited internship in Clinical Psychology. Public sector focus assessing and treating individuals with severe and persistent mental illness. Inpatient rotations with both adults and adolescents. State hospital and medical school inpatient training rotations. Variety of outpatient rotations including community mental health center, outpatient therapy (adults, children, and families), domestic violence, health psychology and adult consult-liaison, adolescent outpatient testing and treatment, neuropsychology, primary care and family medicine, cognitive, neuropsychological, and personality testing. A year-long didactic training seminar series and grand rounds presentations at the medical school are provided. Interns participate in both individual and group supervision. Interns dedicate time each week to work on their own research and/or become involved in ongoing research at the internship. The Internship trains students in six core competencies, i.e., Assessment, Evidence-based interventions, Multicultural Diversity, Multidisciplinary Team Consultation, Supervision, and Professional Development. Please check our webpage for a detailed description of the training opportunities available: www.umassmed.edu/psychiatry/internship

Program Description

Our APA accredited Internship Program is dedicated to the development of clinicians who are able to apply a range of theoretical perspectives and clinical strategies in working with children and their families. Espousing a Practitioner-Scholar model, our clinical practice is informed by empirically based research. We offer a collaborative approach in intervention and the assessment and treatment of families. We strive to maintain a challenging yet supportive learning environment that enables our interns to use new training experiences to grow as professionals and as people. The internship program is organized into several components: outpatient psychotherapy, assessment, and a 16 hour/week specialty placement. Seminars include Working with Families, Psychological Assessment and a weekly topical seminar. Interns participate in weekly treatment teams and staff training. In addition to weekly individual clinical supervision, interns are supervised by a specialty placement supervisor. Placement options currently include Victim Services or early childhood consultation. There is also an option to provide treatment at a nearby young adult job training program. The number and type of psychological assessments conducted will be determined by the coordinator of psychological testing and the intern(s). After Match Day in February, the four matched interns will be contacted to express their ranking in terms of preference for their specialty placement. Preferences and prior experience will be taken into consideration in making these assignments. Each specialty placement involves approximately 16 hours per week throughout the training year. Further information about each of the specialty and the internship experience in general may be found online in the Internship Program Brochure. If not a US citizen, one must have permanent residency status.

Additional Information About Training Opportunities

Interns will participate a Quality Management project, with the support of a supervisor. The interns will meet with agency director of QM and review potential projects proposed by managers. The developmnet of the QM project takes place in the late Spring. Interns have an opportunity to recieve specialty training in CPP, TF-CBT and/or ARC. There is also an oppotunity to see transitional aged youth at a local Job Corps. We are developing a team which specializes in the treatment of children on the PDD spectrum.

Program Description

Interns provide clinical services in this organized training program on Starr's 350-acre Albion, Michigan campus to residents of Montcalm School - Starr's family referral, therapeutic boarding school - and residents in the public residential program. Interns gain experience and are supervised in individual, group, and family therapy. They also provide psychological assessments for Montcalm students and the broader population of Starr, including youth from its court-referred programs, school-based evaluations and day treatment programs. The internship experience is not limited to office-based settings, as interns spend 10-15 hours of face-to-face direct service to clients in the residential milieu and school, collaborating with colleagues on an interdisciplinary team. Those with an interest in research and publication may spend a portion of their time with journal editorial staff or Starr's research department. Interns serve youth and their families across a range of clinical challenges. Youth currently placed at Starr have diagnoses including Autism Spectrum Disorders, mood disorders such as Major Depression and Pediatric Bi-Polar Disorder, Conduct Disorder, Oppositional Defiance Disorder, trauma-related disorders such as PTSD, Attention-Deficit Hyperactivity Disorder and other disruptive behavior problems, substance abuse disorder and learning disabilities. Interns benefit from Starr's vast array of training seminars in areas of resilience, relationship trauma, assessment, cultural competence, crisis intervention, developmental psychopathology, neuroscience, evidence-based practices and professional conduct. This experience integrates science, practice, values and self-reflection to best meet the needs of children and families. Supervision is provided by three licensed psychologists who bring an accumulated 78 years of experience in the profession.

It is strongly recommended that interns have a car. Interns matching with our site will be required to have a background check, and employment will be contingent upon the background check.

Program Description

The Grand Valley State University Internship Program reflects the belief that the internship year is a pivotal time for an intern to gain the clinical and consulting skills needed as a professional psychologist. The program is developmentally-based and is designed to provide both support and challenge for the interns. Interns are encouraged and expected to become actively involved in Center activities including: short and long-term individual and group counseling for a wide variety of psychological problems/diagnoses, assessment, outreach and consultation, research, and administrative functions. Interns will also receive specialty training and experience in crisis intervention. The internship program seeks to provide a training environment which allows the interns to be well prepared for employment in a university counseling center or any other setting requiring similar professional skills. The Training Model used in this internship is entitled "The University Community Model of Training." This model incorporates a systems approach with the Center being embedded, interdependent, and independent within the university community. The fourth component of this model is evolution which insures that interns are prepared for the many challenges and changes in the profession of psychology. There is a strong staff commitment to diversity, and the Center hosts a Multicultural Conference each year. All staff members are highly invested and involved in our training program and represent a variety of theoretical orientations including Interpersonal, Cognitive Behavioral, Humanistic/Existential, Relational, Feminist/Humanistic, Systems Theory, and Psychodynamic.

Program Description

Our program provides multicultural, multidisciplinary, and multi-theoretical training based in a scholar-practitioner model. The intern cohort may include a half-time UM Consortium intern and up to four half-time UM Social Work interns. We also have two Post-Doctoral Fellows, two Post-MSW Fellows and three half-time Psychology Practicum trainees. Staff members are diverse in identities and therapeutic approaches; we share a love of training and a focus on providing quality brief therapy, outreach and consultation services to support the University of Michigan student communities. Further information is available on our web site:<http://www.umich.edu/~caps/training.html>.

Program Description

The full time internship program is based in two training-centered units of the University of Michigan Institute for Human Adjustment: a child/family program (University Center for the Child and the Family) and an adult outpatient program (Psychological Clinic). Interns work half time in each unit for the year. Both units offer strong supervision and seminar programs. Both programs are integrative & evidence-based. The child program works with a wide group of clients in assessment, parent and family treatments, individual therapy, and psychoeducational groups and community consultation; the adult program works with individuals & couples using a range of therapeutic approaches, including CBT, ACT, IPT, psychodynamic, systems, & other models. Both units provide experience in test administration and in group work. Staff are primarily psychologists, with social workers and consulting psychiatrists. Training occurs in a multidisciplinary context that includes psychology practica and social work students, MSW fellows and psychology postdoctoral fellows.

Program Description

VPIC consists of Community Mental Health organizations in a Prepaid Inpatient Health Plan. Summit Pointe is located in Battle Creek and provides training in an array of mental health and disabilities services and supports, including assessment, psychological testing, and clinical services/interventions for mental illness, serious emotional disturbance (children) and developmental disabilities. Crisis intervention, individual, family, group therapy and Assertive Community Treatment (ACT) are examples of intervention activities in which interns will be trained. Summit Pointe provides evidence-based treatments, including Dialectical Behavior Therapy, Cognitive Therapy, Family Psychoeducation, Integrated Dual Disorders Treatment and Behavioral Analysis. Riverwood Center is a behavioral health agency with offices in Benton Harbor, Niles and Saint Joseph, Michigan. Riverwood offers psychiatric, outpatient, home-based, and outreach programs as well as a broad array of services for the developmentally disabled and severe mental illness. Riverwood Center provides training in a comprehensive array of mental health and disabilities services and supports, including assessment, psychological testing, and clinical services/interventions for mental illness, serious emotional disturbance (children) and developmental disabilities for residents of Berrien County, Michigan. Crisis intervention, individual, family and group therapy and Assertive Community Treatment (ACT) are examples of intervention activities in which interns will be trained. Venture Behavioral Health (VBH) is a Prepaid Inpatient Health Plan providing Medicaid benefits management for mental illness, serious emotional disturbance (children), developmental disabilities, and substance use disorder treatment. Training opportunities include utilization importance we place on providing collaborative outreach and consultation to our campus community. Finally, we support and encourage the ongoing process of professional development, recognizing the significance of self-awareness and productive self-reflection throughout this process. Our program is grounded in a strong emphasis on the development of practitioners who have a working knowledge of accepted ethical and legal standards of practice, and who conduct themselves and their practice within these guidelines. In addition, our program has the goal of increasing competence in the following six areas: 1. Generalist Clinical Practice 2. Providing Brief Therapy 3. Multicultural Counseling and Working with Diverse Populations 4. Crisis Intervention 5. Professional Development Issues and Processes 6. Providing Outreach and Consultation Please see our website for a detailed description of our program.

Program Description

The overriding goal of the LSPS-IP is to provide (through supervised internship training) experiences that substantially contribute to the development of entry level competence as a professional psychologist. The internship program is designed to help prepare the doctoral student intern to become a competent, socially responsible psychologist capable of effectively meeting the needs of an increasingly diverse society. The LSPS-IP has as its primary mission providing a supervised training experience that helps interns develop the knowledge and skills necessary for ethically competent entry level professional practice as a psychologist. The psychologist will ultimately embrace a socially relevant practice committed to lifelong learning and scholarship. The senior level pre-doctoral internship is an integral part of LSPS' mission to provide quality psychological services to children, adolescents, and adults in a manner that respects with understanding of and sensitivity to cultural and individual diversity, that includes but is not limited to race, ethnicity, religion, gender, age, sexual identity and orientation, physical and mental challenges, socio-economic status, and national origin.

Program Description

Goal: prepare interns for entry-level work as pediatric psychologists. Two 6-month rotations: (1) Hospital-based rotation- 1 of the following 2 blocks of pediatric specialty clinics: (1) Renal, Endo, Diabetes, and Sickle Cell; or (2) Myelomeningocele, Asthma, and HIV. Intern preferences honored when possible. Participate in multidisciplinary teams. 2) Outpatient rotation includes-(a) Pediatric Neuropsychology assessment & consultation (6 mo);(b) AD/HD Clinic - evaluating children suspected of having AD/HD, learning, and behavior problems (3 mo); (c) Autism/DD Service - diagnostic evaluations/ consultations for children suspected of having autism spectrum conditions/ developmental disabilities (6 mo); (d) Rehabilitation- behavioral programming and intervention with a multi-disciplinary team on the Rehab. Unit (3 mo). Optional research elective. New electives in pain management, Autism research and advocacy. Throughout the entire 12 months, interns provide inpatient consultation liaison services in response to requests from hospital physicians. Typical cases: Adjustment to chronic illness, adherence difficulties, pain management, somatoform/ conversion disorders. Throughout 12 months, interns devote 3-4 hrs/ week to therapy cases-individual, family, and pediatric psychology therapy cases. 1 case from Adolescent Medicine Clinic. Throughout the entire 12 months, interns participate in weekly Pediatric Psychology and Neuropsychology seminars, weekly Family, Individual, and Peds Psych Therapy group supervisions, & monthly core Professional Issues seminar, case conference, & Grand Rounds. Interns present at case conference and submit case for publication. Interns receive 5-6 hours of supervision per week, 3 hours in a group and 2-3 hours individually. Interns learn supervision skills working with practicum students. Optional research elective available working with faculty. See <http://www.med.wayne.edu/psychiatry/>

Program Description

For website: http://www.henryford.com/body_program.cfm?id=38453 For information on Henry Ford Hospital, please see www.henryford.com. This is a tracked internship with concentrations in Adult Neuropsychology (2), Pediatric Neuropsychology (1) or Health (Consultation-Liaison) Psychology (3), and Medically Complex Patients (3). Interns must specify for which track they are applying. Health psychology interns will be considered for each of the relevant health psychology tracks. Each intern spends approximately one day per week in the outpatient clinic. Health psychology interns split their time between the internal medicine clinic, the transplant service, and outpatient mental health. Medically complex track interns spend time in the Emergency Department, surgical trauma service, and cardiology. Adult neuropsychology interns spend almost all their time on the neuropsychology service or in related activities. Pediatric neuropsychology interns spend some time in the Autism clinic in addition to their work on the neuropsychology service and one day a week in a pediatric mental health clinic. Neuropsychology is focused on assessment and report writing using a flexible battery approach. Staff members have particular interest in executive dysfunction, stroke, epilepsy, head injury, and pediatric neuropsychology. Stroke, epilepsy, dementias, learning disabilities, and psychiatric disorders form the core of the referrals. Health psychology interns focus on the relationships among medical illnesses, psychiatric disorders, and other behavioral problems. Patients often have life threatening conditions or behavioral problems secondary to their medical problems or the treatments for those problems. The outpatient service provides mental health services to general psychiatric population. The clinic uses an open access model of care in which interns will work with other providers to provide comprehensive assessment, treatment planning, and care on a walk-in basis. Interns will also see more traditional psychotherapy patients using evidence based interventions. Applicants must be eligible for a limited license in Michigan, and must apply for that license before starting the internship.

Program Description

The Psychology Staff at the John D. Dingell VA Medical Center has offered training programs for graduate students in clinical psychology for over fifty years. Currently, the Internship Program emphasizes a practitioner-scholar model of training. The Program is designed to contribute to the development of a "clinical attitude," the desire to understand people in order to help them. Its primary goal is the development, through practical experience and didactic presentations, of those skills necessary for providing a variety of psychological services within a general medical center setting. This is achieved by presenting the student with the opportunity to work with a variety of patients and a diversity of psychological approaches to patient care and assessment. A secondary goal of the Program is to contribute to the Mission of the medical center in providing high quality psychological services to patients and their families. The metropolitan Detroit area is a cosmopolitan community that is home to an extremely diverse population with social, cultural, and academic activities reflective of that diversity. Many people are pleasantly surprised to learn that the area is home to a large professional community, many colleges and universities, varied entertainment venues, extensive cultural resources, and a great number of outstanding restaurants. The Training Program is concerned with the multi-dimensional richness of all the identities that a person (client, intern, staff member) brings to the setting, including ethnicity, sexual role, race, cultural attitudes, and individual personality within those factors. The Psychology Section staff and students are a diverse group of people. This cultural diversity is a synergistic source of strength, creativity, and liveliness. Students from diverse cultural backgrounds are strongly encouraged to apply.

Post Match Requirement: In compliance with the Michigan Mental Health Code, after matching but before securing employment with the Michigan State University Counseling Center, the doctoral intern must pass a criminal background check conducted by the university at no charge to the doctoral intern. Refer to the following website for more information. <http://www.hr.msu.edu/documents/facacadpolprocr/CriminalCheckFAQ.htm> Applicants who match to our program but do not successfully pass this background check will be dismissed from the internship (see APPIC Match Policy 4a).

Program Description

This year we continue our tradition of training in the fundamental modalities of professional psychology utilizing a scientist-practitioner model with an emphasis on "multiple ways of knowing". Training occurs primarily through interactive seminars, supervision and mentoring that attends to evidence based practice, interdisciplinary collaborations, assessment, providing supervision, outreach and research in the context of a multicultural environment. Adherence to the American Psychological Association's Code of Ethics and relevant state laws are woven into all aspects of training. Preferred applicants have a passion for working with underserved students, respect for the value of assessment/testing, exposure to evidence based treatments and interest in supervising. See the internship program web site for details: <http://www.counseling.msu.edu>
This internship has been continuously accredited by APA since 1979. American Psychological Association Office of Program Consultation and Accreditation 750 First Street, NE Washington, DC 20002-4242(202) 336-5979(202) 336-6123 TDD

Program Description

The Pre-Doctoral Psychology Internship at Pine Rest Christian Mental Health Services offers the highest quality training to prepare interns for the professional practice of psychology. The training program utilizes the Practitioner-Scholar Model, with an emphasis on developing skills to work with persons' spirituality, as appropriate. Our mission is to provide excellent clinical training in psychological assessment, intervention and consultation within a variety of settings (i.e. outpatient, inpatient, medical, and urban outreach). This training will equip graduates with the competencies needed to obtain employment in a variety of applied clinical settings. Interns will be challenged to further their understanding of how personal history and worldview impact their ability to develop rapport, choice of interventions, and treatment outcomes. We believe that that best clinical work arises from clinicians who are self-aware, and appropriately use their personal awareness and belief system to assist their patients in making important life changes. Our training philosophy emphasizes an environment that simultaneously nurtures and challenges interns, both as professionals and as people. We encourage collaboration among training faculty and interns. We view interns as junior colleagues who are valued member of our staff. In sum, Pine Rest strives to equip interns with the ability to integrate science, practice, and faith values, while constantly evaluating their appropriateness and effectiveness with the patients they serve. Pine Rest is passionate about training Doctoral Psychologists who can make a difference in this world. To that end, we focus on an intern's clinical skills as well as the development of self awareness and sensitivity to matters of diversity, especially with regard to matters of spirituality.

Program Description

The BRAINS Predoctoral Psychology Internship Consortium offers 3 training positions. Two interns are placed at BRAINS outpatient clinic, a dynamic multidisciplinary agency. The third intern is placed at Ottawa County Community Mental Health. All training focuses on pediatric and young adult neuropsychological and psychological testing. Services also include comprehensive assessment, child/family services, and developmental disabilities. Interns attend didactic training and group supervision together at BRAINS. All sites emphasize child/pediatric and family systems with a neuropsychological perspective infused throughout the training modules.

Program Description

The Clinical Psychology internship at Hawthorn Center emphasizes Child/Adolescent Clinical Psychology, and provides interns with a comprehensive, well-supervised clinical experience with children, adolescents and families. Interns are involved in inpatient and outpatient assessment and treatment, consultation, and seminars. Inpatient treatment involves long-term and short-term cases, along with milieu and inter-disciplinary team functioning. Consultation with hospital, school personnel and community mental health caseworkers is also an important component of the program. Opportunities for specialized assessments include differential diagnosis, autism spectrum disorder, and trauma evaluations. Outpatient rotation services provide an opportunity to conduct treatment and assessment with children and families in a community based setting. Treatment approaches include cognitive-behavioral, psychodynamic and play therapy, as well as parent child management training.

Program Description

Internships are offered at four correctional facilities:—The Stillwater facility is an older, close custody facility. The Psychology Department operates in many ways like a CMHC within a correctional facility.
 The Lino Lakes facility is a medium custody campus with large CD and SO treatment programs; however, the internship is with the Psychology Department and does not provide CD or SO specific treatment. The Psychology Department is responsible for providing assessment, therapy, and crisis intervention services at the facility. As an intake facility, the focus is often on assessment, both mental health and cognitive. Therapy services are typically brief and solution focused, though some clients may receive more long-term therapy. Additionally, the Psychology Department has a residential program for offenders who are psychiatrically and/or cognitively lower functioning.
 —The Shakopee facility is the only MN state prison housing female offenders. The psychology department offers a range of services including assessment, crisis intervention, group and individual therapy.
 —Oak Park Heights is a maximum security prison. The facility houses the DOC's inpatient psychiatric unit. Every Friday the interns meet for didactic training. Interns work closely with their on-site supervisors to develop competency in assessment, group and individual therapy, crisis intervention, clinical supervision, and consultation. We emphasize quality training with the explicit goal of ensuring that our interns become competent and confident of their ability to practice independently upon completion of the internship. To achieve this goal, the interns and supervisors prioritize growth areas and focus on developing these areas into strengths.

Program Description

We offer two predoctoral internships here at APC, one that is more focused on children and adolescent areas and one placement that is more of a generalist position. Arrowhead Psychological Clinic is a private outpatient mental health clinic with 5 doctoral licensed psychologists and 2 post docs and 2 masters level clinicians. It is located within the heart of downtown Duluth, blocks from Lake Superior. We serve a wide variety of clientele from the preschool to geriatric ages. We have specialized services in the area of couples counseling, preschool assessments and interventions, sports psychology and anger management. We are not a community mental health center that offers multiple outreach services to serious and persistently mentally ill, however, we do provide outpatient services to this population. We have been offering a doctoral internship for the past 6 years and the students involved have provided positive feedback about our placement. If you are interested in our site I would encourage you to call and speak with one of our current interns to get feedback on their experience here. We offer two predoctoral internships here at APC, one that is more focused on children and adolescent areas and one placement that is more of a generalist position.

Program Description

Four agencies are members of the consortium: 1. Ramsey County Mental Health Center is a Rule 29 clinic and a Community Mental Health Center. Multiple services are housed at the Center and a diverse population of Ramsey County residents is served, especially those with public or no health insurance. Psychologists perform forensic and other psychological assessments, individual and group therapies, and a variety of supervisory functions. 2. Fraser Child & Family serves children with mental health and autism spectrum disorders and their families. The Fraser Autism Program provides evaluation and treatment services for children with autism spectrum disorders and their families. The program provides support to families through consultation, education, parent/child guidance and therapeutic support. The Fraser Child and Family Mental Health Program provides services to children whose parents or caregivers have concerns about their developmental, behavior, and/or emotional well-being. 3. Argosy Counseling Service (ACS) provides mental health services for matriculated undergraduate and graduate students of Argosy University and members of their immediate families. The mission of the ACS is to provide mental health services which will support students in successfully completing their program of choice at the University. Services include individual, couples, family, and group therapy, formal psychological evaluations, consultation available to the University Community. 4. Relate Counseling Center provides hands-on training to potential clinical psychologists through real world experience and committed supervision. Students with an interest in working with children, adolescents, and their families are encouraged to apply. Consortium interns remain with one agency throughout their internship. Applicants indicate preferred site when they apply to the consortium.

Program Description

The mission of the Pre-Doctoral Psychology Internship Program at Mental Health Systems, PC (MHS) is to train and teach interns to be effective clinicians in the practice of clinical psychology in a community mental health setting. A majority of services provided by MHS use DBT. The goals of training are to assist interns in developing their own therapeutic style backed by theory while acquiring the skills of an effective clinician. Additionally, MHS emphasizes the development of interns as the part of a therapeutic team. Interns will be trained in consultation within the MHS team, as well as in consultation with individual therapists, case managers, ARMHS workers, psychiatrists and other professionals at other agencies. MHS subscribes to the Local Clinical Scientist model of training. As such, interns are trained to provide evidence based services and apply information gained by science and research to each unique client. Interns are trained to identify how social, biological and psychological factors impact a client's mental health symptoms as well as to use this information in the application of effective therapeutic interventions. An important part of training is identifying transference and counter transference issues, and how this impacts clinical interventions. Finally, as a part of training at MHS interns are given an opportunity to provide supervision to practicum students with the guidance of seasoned clinical supervisors.

Program Description

Interns will spend approximately 24 hours/wk of his/her time in outpatient services. Sixteen hours/wk of the intern's time will be spent in a series of three, three month long rotations through the following services: 1. Community Support Programs and/or Partial Hospitalization Program, Residential chemical dependency program, and Psychological Testing in the Outpatient Program. Three months will be spent in the Outpatient Program full-time, 40 hours a week. During the CD rotation, the intern will lead psychoeducation groups with a focus on mental illness and the needs of the current residential treatment group. The intern will provide a mental health screening on each of the patients entering the residential program. He/she will conduct diagnostic evaluations and provide individual therapy on an as needed basis. The intern will learn about and co-lead treatment groups with primary CD counselor. During the PHP and CSP rotation, duties include co-leading therapeutic groups (DBT, anger management, MI/CD) depending on site needs and intern training goals. The Hibbing interns will participate in 16 hours of face to face contact total, combining PHP groups and co-leading a DBT group. During the Psychological Testing rotation, interns will spend two days per week completing 1 1/2 full psychological batteries per week in the outpatient program. Four out of the sixteen hours a week are dedicated to learning new test instruments. Interns will receive two hours per week of individual supervision from the training director and other assigned supervisors. There is one, four hour didactic seminar provided per month. Interns will participate in group supervision for 2-3 hours (depending on the rotation) per week for the entire year. Interns will have a combined total of 16-18 hours of individual and group supervision per month. A total of 2000 hours of training will be accrued by interns including vacation time and holidays.

Program Description

General clinical child psychology internship in a Children's Hospital, with specialty training offered in both Pediatric Psychology and Neuropsychology. All interns will have involvement in all services but those desiring postdoctoral fellowships will gain additional experience to be competitive for these programs. Non-rotational internship: interns will be involved with outpatient therapy/assessment, and inpatient consultation-liaison all year long, changing placements and/or supervisors at six months to include other experiences. Interns also participate in a community placement for additional consultation experience, which may include an inner-city high school medical clinic, parent education/training, and private practice pediatric clinics (placements vary each year). Interns are expected to complete four formal presentations each year: psychology topic presentation, research presentation, multicultural case presentation, and community presentation. We have two primary campuses, with two interns in Minneapolis and one in St. Paul, interns travel between campuses for didactic seminars and have frequent contact with each other (mileage is paid).

Program Description

Hennepin County Medical Center has been a psychology training site since 1965. It is a large teaching hospital and a Level I Trauma Center. Our internship program is accredited by the Commission on Accreditation (CoA) of the American Psychological Association (APA). While we emphasize a strong foundation in assessment and intervention as well as consultation to our medical services, we also strive to individualize the internship experience. Our setting offers interns the opportunity to work with an ethnically, culturally, and socioeconomically diverse patient population. In addition, being part of a large teaching hospital and trauma center provides our interns many unique training experiences.

Program Description

Our new Amplatz Children's Hospital and outpatient clinic opened in 2011. We are committed to promoting interns' professional development in diverse competency areas so as to prepare them for rewarding careers as psychologists in healthcare, academics, and other organizational settings. We provide broad training in child psychology with a relative focus on psychological assessment. Interns complete two 6-month rotations associated with 2 of 3 Medical School divisions: (a) Child & Adolescent Psychiatry; (b) Pediatric Neuropsychology; and (c) Pediatric Psychology. The internship has been APA-accredited since 1965, making it one of the longest continuously accredited programs in this region. Interns gain exposure to complex medical (e.g., transplant, diabetes) and psychiatric patients from early childhood through adolescence, both outpatient and inpatient. Intensive didactics and supervision are strengths of the internship. It is a clinically rich, stimulating setting with strong emphasis on quality assessment and improvement and excellent interdisciplinary collaborations. Didactics are child-focused and include: Assessment Seminar, Psychotherapy Seminar, Professional Development Seminar, Topical Seminar and other training in Pediatrics and Psychiatry Departments. Interns participate in case conferences, multiple rounds, and work collaboratively with interdisciplinary teams. We also provide two 1-day workshops on supervision and on cultural diversity in conjunction with other local internships (through MAAPIC). Faculty are active clinicians involved in a range of clinical, research, educational, administrative and professional activities who are committed to training and supervision. The internship provides excellent preparation for postdoctoral fellowships and licensure. The University of Minnesota Medical School also has a postdoctoral fellowship in Pediatric Neuropsychology. Postdocs are also available some years in Child & Adolescent Psychiatry. Interns get exposure to psychiatric emergency room. Each intern works with a mentor through the year.

Program Description

This internship has been accredited by the APA since 1972 and has been engaged in training for over 50 years. We provide services to the University community, primarily serving the student body. Significant strengths of the program are intensive training in the provision of clinical supervision, opportunities to facilitate groups, and supervision of outreach activities. UCCS uses a brief counseling model. Clients and counselors set mutually agreed-upon goals following the initial assessment process and work toward achieving those goals. While it is anticipated that most clients will be served in a time-limited approach, some clients may be seen over a longer period of time. Our training philosophy emphasizes the application of scientific inquiry to clinical practice, building on existing competencies of interns, continuous improvement of the program via regularly scheduled evaluation and providing the conditions to foster ongoing professional learning. Please see our website for greater detail.

Program Description

The Indian Health Board of Minneapolis, Inc. (IHB) is a Federally Qualified Health Center (FQHC). It is a nonprofit, culturally specific health care agency that provides medical, dental, mental and chemical health services to children, adolescents, and adults. Within the outpatient mental health department, clients served include about 73% American Indian, 14% Caucasian, 7% African American, and 6% other races. Training within Counseling & Support is based on a practitioner model with a primary goal of equipping emerging mental health professionals with the highest quality skills for addressing the health disparities and mental health needs of the American Indian community in a culturally sensitive and proficient way. Theoretical orientations of staff are varied and include conceptualization from object relational, systemic, interpersonal, psychodynamic, feminist and cognitive behavioral perspectives. The two primary rotations are outpatient, with adults and children, and in vivo services provided within a magnet school setting one morning weekly. The mental health department, called the Counseling & Support Clinic, serves roughly 70% adults and 30% children and families. Individual and family therapy, group therapy, child and adult assessment, chemical health assessments, social work, and psychiatric services are provided on-site. The department participates with the IHB Medical Clinic in a collaborative effort to reduce health disparities, and opportunities for consultation with Medical Clinic providers are also available. The department also prides itself on training students in cultural proficiency skills aimed toward the urban American Indian community. The agency provides trainees with a wealth of diverse clinical experiences and training opportunities, including urban outpatient treatment, psychological evaluations, collaborative opportunities with culturally-specific schools and other agencies, and topic- or diagnosis-specific group therapy. Many interdisciplinary resources are available to interns, both onsite and in collaboration with other agencies and organizations. Staff is committed to working with urban and culturally diverse children and families, with specialized focus and services on the urban American Indian community.

Program Description

The Predoctoral Psychology Internship program at Washburn Center for Children provides training in assessment and intervention with children, adolescents, and families from diverse urban and suburban populations in the Outpatient Department within a well-established community mental health center. Clinical experiences include: diagnostic intakes and individual, family, and group therapy within the Outpatient Department; and, psychological evaluations on clients referred from all of Washburn's programs (e.g., Outpatient, Day Treatment, Crisis Stabilization). The Predoctoral Psychology Internship provides broad-based clinical training, with the opportunity to explore in more depth potential areas of specialization such as multicultural treatment or treatment of clients who have experienced trauma. Training seminars provide Interns with a general background in many areas such as development, specific interventions (e.g., play therapy, TF-CBT, DBT, EMDR), varied clinical topics, multicultural issues, and supervision. Weekly individual supervision is provided by two staff psychologists, as well as a postdoctoral fellow. Two hours of group supervision/week with the Intern cohort are facilitated by staff psychologists. Interns also have the opportunity to develop supervisory skills through providing weekly supervision to a predoctoral practicum student. Interns spend approximately 50% of their time in direct clinical service; the remainder of their time is spent in training seminars, team case consultations, support activities (e.g., care coordination, consultation, clinical documentation), and individual/group supervision. At the onset of Internship, Interns are asked to identify their training interests, goals, and skills. In this way, their supervisors can, as much as possible, refer therapy and assessment cases to Interns that are commensurate with their skills and clinical interests.

Program Description

The Minneapolis Internship Consortium internship is a full-time, 12-month clinical experience which typically begins in August. The training program is firmly rooted in providing community mental health service to underserved populations. In addition, interns have the opportunity to develop and fine-tune skills as a practitioner-scholar. The primary method of training used is experiential, i.e., learning by doing. § INTERNSHIP SITES The Consortium has two separate programs, corresponding to its two participating agencies. In the APPIC match process, prospective interns apply to their preferred agency. Subsequently, they spend the majority of their training week at that agency. One day per week, the interns rotate to the other agency for specialized training at that site. Park Avenue interns rotate one day per week to the Interprofessional Center for Counseling and Legal Services (IPC). In this setting, they have the opportunity to learn how to administer, score, and interpret a variety of assessments that might address the areas of personality, emotional/behavioral functioning, cognitive, career, neuropsychological screening, and/or ADHD/LD concerns. As part of the internship assessment experience, while at the IPC, interns attend didactic seminars which include supervision of supervision, assessment, and diversity. They are also assigned, on average, one to two clients per week for whom they conduct a clinical interview and interpret test results. IPC interns rotate one day per week to Park Avenue Center. During that day, they will lead or co-facilitate a group. Typically, the intern has a caseload of 2-3 clients for individual therapy. In addition, the intern will occasionally assist with crisis intervention for clients when the assigned student therapist is unavailable. Finally, the intern attends the weekly therapy seminar with the other doctoral interns. A full description of each site is available at www.angelfire.com/psy/parkavenuecenter/intern.pdf

Program Description

The MSOP Psychology Pre-doctoral Internship Program is best suited for students seeking experiences within a secure program providing sex offender treatment to civilly committed clients that will compliment their previous training. Successful applicants will possess a solid foundation in psychological assessment and therapeutic intervention, will have completed or be in the process of completing a formal dissertation, and must have successfully defended the dissertation proposal prior to the internship start date. Doctoral students from Clinical and Forensic Psychology programs who have obtained approval from their faculty and are internship-eligible may apply. Students from APA-approved programs are preferred. MSOP is an Affirmative Action and Equal Opportunity Employer.

Program Description

Nystrom & Associates, Ltd. is a Rule 29 mental health clinic that offers a wide variety of services including outpatient therapy, group therapy, adult day treatment, Dialectical Behavior Therapy, chemical dependency treatment and groups, sessions with a nutritionist, psychiatric services, Adult Rehabilitative Mental Health Services, and home-based family therapy. There are seven Nystrom & Associates, Ltd. clinics in Minnesota and two in the state of Washington. Each clinic mirrors the other and provides the above listed services to individuals of all ages, gender, ethnicity, and spiritual background. The goal of Nystrom & Associates, Ltd. internship training program is to provide interns with opportunities to learn about and implement a variety of clinical psychological services. The internship will consist of opportunities to gain experience in the area of psychological assessment and intervention. One goal that this internship focuses on is learning about and implementing a clinical psychological evaluation, including conducting new patient diagnostic assessment interviews with a variety of clients from the ages of 3 and up, evaluating clients using a variety of psychological assessment tools, creating comprehensive psychological evaluation reports, sharing psychological evaluation results and recommendations with clients, and making appropriate recommendations and referrals based on the client's unique issues. The objective is to give interns experience and knowledge in the area of psychological evaluations that implement the use of clinical interviews and a variety of psychological assessment tools that help with clarifying and diagnosing mental health disorders and personality disorders, help with assessing cognitive ability and adaptive functioning, evaluate for the presence of attention and learning disorders, screen for possible cognitive or memory impairment, evaluate for pervasive developmental disorders, assess for ability to emotionally deal with surgery, and help in identifying any possible emotional or behavioral issues. NAL also offers individual and group psychotherapy for individuals struggling with a variety of issues including anger management, grief and loss, depression, anxiety, chemical dependency, and more. NAL mental health professionals are committed to meet with individuals to best serve a wide variety of populations and diagnoses. Our goal is to meet individuals where they are in their own journey, valuing their individual strengths, viewpoints, and challenges. We work together with the individual, child and family to find the paths that lead to the most successful outcomes. Group therapy provides individuals with a peer support system that allows them the opportunity to share and discuss issues with those going through similar situations themselves, all the while being directed and led by a highly qualified mental health professional. Another goal of the internship is to provide the interns with the opportunity to learn about the process for co-leading and/or creating a group therapy experience, work on creating a therapeutic group of their own, consulting with supervisors, Nystrom & Associates, Ltd. mental health professionals, and peers to help identify needs and ideas for the focus of the therapeutic group, consult with supervisors in getting approval for the group and helping with marketing the group, and co-facilitate this group and/or other already created groups with other interns and licensed mental health professionals. In addition to providing interventions through a group therapy experience, interns will also work with clients on an individual basis in a therapeutic session. Interns will work with children, adolescents, and adults in providing psychotherapy and creating treatment plans that best meet the client's area of need and concern. Interns will have opportunities to observe and shadow a therapist in a psychotherapy session, act as a co-therapist in a psychotherapy session with another therapist, and have clients of their own that they see regularly for individual psychotherapy sessions. Each psychotherapy client will have an initial new patient diagnostic assessment (intake interview) followed by regularly scheduled weekly individual psychotherapy sessions. An additional goal of this internship is to provide the interns with a breadth of opportunities to learn about all of the services offered at Nystrom & Associates, Ltd., observe sessions related to these services, consult with other healthcare professionals, and to learn about a number of healthcare services that can be helpful to continue the client's care and meet their needs. Other goals of this internship experience are to provide opportunities for clinical case consultation, clinical supervision, socialization with other mental health professionals and interns, and to provide an opportunity for frequent clinical didactic trainings on a variety of mental health topics.

Program Description

We are a behavioral health CMHC with a broad level of community involvement and many innovative programs. The staff enjoy training and interns are accepted as valued colleagues. They get to play important roles in the assessment and treatment of a broad range of persons. Canvas Health has a strong role in evaluation services to the court and social services system, and interns are trained in doing many types of evaluations used by county departments, as well as for other internal and community needs. Interns are involved in the assessment and treatment of persons with a broad range of conditions and functioning, serve the emergency services system, crisis clinic and the jail. Canvas Health trains interns to serve persons with serious and persistent mental illness and children with severe emotional and behavior disturbance. Child interns do a 6 month rotation in a home-based family therapy program serving seriously emotionally disturbed children and adolescents, and adult interns serve a 6 month rotation in an outpatient day treatment program. Other experiences include a year long assessment rotation and outpatient rotations, and year long DBT rotations. Canvas Health has a growing FASD and neurodevelopmental clinic and a developing integrated care program that interns may receive supervised training in. Canvas Health uses many evidence-based treatments and assessments. A large base of clinical data from the agency's outcomes instruments is available for research projects. Interns and staff presented research using this database at APA in 2010, 2011 and 2012. In 2013, an intern and staff will present at the Collaborative Family Healthcare Association conference. Canvas Health welcomes applicants from diverse racial, ethnic, and cultural backgrounds. We have developed all documentation in Spanish. We are growing programs into other metro counties and serving a broader range of diverse persons. The psychologist group and the training program have a creative and committed focus on diversity and equity training.

Program Description

FMC Rochester serves federal inmates with significant medical and mental health needs. We offer a variety of treatment modalities. Interns have a year long rotation in mental health (half time) and spend approximately four months on three different rotations(half time): drug abuse treatment, assessment (e.g., forensic, neuro-psychological, and personality/intellectual), and general population. Please see our website for additional information, www.bop.gov/

Program Description

The basis of our training program is an integrated sequence of learning opportunities within a developmental focus, and our training model is practitioner-scholar. The internship has a dual focus on both clinical training and professional growth. We believe that people learn and work best in a supportive, collegial atmosphere; therefore we provide an environment in which we expect interns to stretch, take risks and grow into confident, competent, ethical psychologists who are able to empower their clients and colleagues. We expect that each intern will finish the training experience with competencies in the following areas: Individual Therapy, Career Counseling, Group Therapy, Consultation and Outreach, and Supervision. Diversity and multiculturalism are key values for our counseling center, in addition to professionalism and ethical practice. Within the competency areas, there are opportunities for working with special populations of interest to the intern. One of the strengths of our program is the breadth of supervision interns receive: up to 8 hours per week in both individual and group formats with a variety of supervisors. Interns and supervisors set learning contracts at the beginning of each semester, and use these actively to ensure that interns' needs and desires are met. A highlight of the interns' training week is the Intern Seminar, and most weeks we are joined for seminars by interns from the University of Minnesota's counseling center. Specialists from both within and outside the two universities are invited to speak on various topics, including but not limited to ethics, empirically-supported treatments, assessment, diversity issues and multicultural counseling, and counseling students with specific psychological disorders. We also provide seminars on job search and licensure procedures, and we encourage interns to visit psychologists in various local agencies to learn more about practice in a variety of settings.

Program Description

The internship emphasizes clinical work with a major focus on diagnostic assessment and individual psychotherapy. The MMPI-2 and other assessment tools are used. Familiarity with MMPI-2 is required. Students learn and experience the role of a clinical psychologist in an outpatient setting; providing psychotherapy, doing personality testing and test interpretation, providing test result feedback to patients and therapists, attending consultation meetings and seminars, maintaining written records, collaborating on medication management with on-site psychiatrists, arranging referrals to other agencies, and learning the ethical and legal considerations involved in service delivery to a diverse patient population. Students receive intensive supervision throughout their training including: two hours/week of individual supervision, one hour/week of discipline-specific group supervision and one hour/week of group consultation in a multidisciplinary team format. Education for students includes weekly seminars on various psychotherapy topics. Past offerings have included: Basic Psychodynamic Theory and Therapy, Attachment and Empathy, Transference, Countertransference, Personality Disorders, Couples Therapy, Cross-Cultural Competence, Resistance, The Grief and Loss, Working with Seniors, and other clinical and theoretical issues of importance. The clinic is committed to cultural diversity in populations served and in all hiring and training practices.

Program Description

The Emily Program provides comprehensive psychological, nutritional, and medical care for individuals with eating disorders within outpatient and residential settings. The multidisciplinary staff includes psychologists, social workers, marriage & family therapists, dietitians, and physicians. Psychological Assessment Training Interns initially observe a licensed psychologist conducting the assessment battery in conjunction with weekly supervision with this psychologist. Upon seeking services at the Emily Program, each client completes an evaluation process that consists of the following assessment dimensions: diagnostic interview, personality assessment, eating disorder inventories, depression and CD screening. After observing and then practicing this assessment process with the supervisor, Interns then conduct and write-up the assessment process under supervision. Skills in the interview process, assessment interpretation, DSM-IV diagnosis, and treatment planning are enhanced through this progressive process. Psychological Intervention Training The Emily Program believes that eating disorders are multi-determined problems. Effective treatment requires awareness of the genetic, biological, psychological, social, and cultural impacts on each person. Our holistic and humanistic approach is based on the belief that individuals are unique and that they intuitively seek meaning, value, and creativity in life. We believe that individuals have choices to make and responsibilities to uphold for themselves and in the context of community. We do not believe that eating disorders are a choice or a moral failing. We believe that given a supportive and understanding environment, individuals can make healthy choices about their recoveries and the future directions of their lives. Please see The Emily Program website for the Internship Brochure for further program description.

Program Description

SOFS is an APA-Accredited internship site, initially accredited in 2012 for a period of 7 years. The Psychology Department at State Operated Forensic Services (SOFS) offers an internship program for students completing their doctoral degree from Clinical and Counseling Psychology Programs. SOFS is comprised of secure and semi-secure inpatient psychiatric facilities. Patients come to SOFS on an involuntary basis, and are sometimes committed by the courts for evaluation or treatment. SOFS also serves as a statewide treatment facility for persons found not guilty or unable to stand trial by reason of mental illness. SOFS treats a patient population that is both clinically and demographically diverse. Our patients have a very wide range of diagnoses, covering virtually all the major categories of the DSM-IV-TR. The most common primary diagnoses include Schizophrenia-spectrum disorders, affective disorders (primarily Bipolar Disorder), and Antisocial and Borderline personality disorders. Many of our patients have committed sexual offenses, and have corresponding diagnoses of paraphilias. Additionally, many patients have primary or secondary diagnoses of substance abuse, borderline intellectual functioning, and anxiety disorders. SOFS consists of eleven programs and training experiences are available in several of these, including the Minnesota Security Hospital, Forensic Transition Services, and Good Lives Day Treatment Program, with additional experiences with young adults, sex offense, and competency restoration being offered based on intern interest and staffing availability. The program brochure is available on our website and any additional questions regarding the program may be emailed to the training director.

Program Description

Our APA-accredited predoctoral Internship training program adheres to a generalist training model offering a broad range of training opportunities. Our goal is to help Interns become competent, ethical and thoroughly trained professional psychologists who will go on to distinguished careers. We have a diverse training faculty and adult patient population situated in a large medical center setting. In addition to assessment and intervention training and supervision, interns will consult and work with a variety of other disciplines who particularly value psychological input. Interns attend weekly seminars (cognitive and neuropsychology, diagnostics and psychopathology, EBTs and special topics, psychological assessment and professional issues) and other educational activities designed to broaden and hone their professional development. Four three-month rotations including inpatient psychiatric, outpatient mental health (including women's mental health), outpatient PTSD program, health psychology/behavioral medicine, geropsychology, home based primary care, integrated primary care, and residential PTSD treatment program. Part-time rotations in neuropsychology, research, and administration may be selected with prior approval of the supervisor and Training Director. At the end of each rotation, comprehensive written competency evaluations are required with supervisors rating Interns and Interns rating the rotation and supervisor. For more detailed information about rotations, seminars, training faculty, etc., please visit our website. In 2010, we received another 7 years of continuous accreditation. In 2003, an APA Site Visitor indicated our program is "one of the better kept secrets in the VA." In reference to that comment, a recent APA Site Visitor stated, "the word must be getting out." During the 2010 site visit, the site visit team noted a total of nine exemplary practices. You will find a team of dedicated training faculty at our facility.

Other Application Requirements

Once hired, interns must provide documentation of vaccinations and pass a background check (with fingerprinting) and physical exam (including drug screen). Failing any of these means forfeiting the internship position.

Program Description

The Pine Grove Behavioral Health & Addiction Services' Doctoral Internship in Professional Psychology (PG-DIPP) is an APA accredited program (accredited to 2018) which operates from a practitioner-scholar model. Our internship is committed to providing excellent training and supervision. Our training year consists of three rotations, each one lasting four months. The rotations are (1) Professional Enhancement Program (PEP), an intensive outpatient treatment program for impaired professionals where chemical dependency is not the primary focus; (2) Gratitude, a residential treatment program for compulsive sexual behaviors; and (3) Outpatient Services (OS) which provides psychological assessment and therapy services to adults, children and adolescents. On the OS rotation, the intern also has opportunities to assist with evaluations in our Evaluation Center which conducts comprehensive evaluations for impaired professionals who are typically referred by professional licensing boards or professional assistance programs. These rotations provide a broad range of experiences, and offer unique opportunities for specialized experiences with personality disorders, addictive disorders and treatment of disruptive behavior problems. Our interns perform psychological assessments and provide psychotherapy (which is primarily group therapy, with some opportunities for individual and/or family therapy). Our interns are active members of the multidisciplinary treatment team on each rotation, so they have opportunities to interact with physicians, social workers, case managers, family therapists and nurses. We believe the intensity and depth of training received in these treatment programs provides early career professionals with a strong foundation of core clinical competencies that are applicable and generalizable to other settings and populations.

Interns get a generalist training and are exposed to a variety of supervisory orientations during the year. Our interns get experience with a diverse patient population, and they get experience with a wide range of disorders (including mood, anxiety, addiction and personality disorders). Trauma and addictions receive attention in all of our treatment programs.

The interns receive weekly supervision (individual and group) with Mississippi Licensed Psychologists. We also provide didactic training sessions focused on strengthening a broad array of core competencies. These include evidence based/supported treatment, psychological assessments, professional ethics, working with trauma and other professional issues. In addition, a special project is required and due by June 15th. The purpose of this project is to provide interns with the opportunity to develop or strengthen their professional competencies in the areas of consultation, outreach, professional presentations and program development or evaluation.

Hattiesburg is a small city with a population of approximately 45,000. It has a historic downtown, two universities (University of Southern Mississippi and William Carey University) and a park with a small zoo. It is also the regional center for medical treatment in this area of Mississippi with 2 hospitals, a large medical clinic and many specialized medical facilities. Hattiesburg has easy access to air travel, entertainment, sporting events, recreational facilities and cultural opportunities because it is within driving distance to the Gulf Coast, New Orleans LA, Jackson MS and Mobile AL. Hattiesburg has friendly and diverse population, affordability, good restaurants, shopping, scenic countryside and warm climate. See our website (www.pinegrove/treatment.com) for more details.

Program Description

Our APA-accredited predoctoral residency program endorses a cognitive-behavioral orientation within a scientist-practitioner model. Interest in and experience with this approach are important selection criteria. The residency year is divided into four three-month clinical rotations. Rotations available at UMC include: Adult Outpatient, Anxiety and Mood Disorders, Pediatric Psychology, Child Health Outreach, Child Inpatient, Neuropsychology, Insomnia, and Psychophysiology Disorders. Rotations at the VAMC include: Health Psychology, Trauma Recovery Program, Chemical Dependence Treatment, and Addictive Behaviors Consultation & Intervention. Additional clinical opportunities are available in the adult, child, and specialty clinics whereby residents gain experience working with longer-term cases. Although clinical training activities play a paramount role in our program, residents are required to actively maintain involvement in research as well. Continuing education and professional development didactics comprise an additional important component of training. *** INFORMATION MAY BE OUTDATED. PLEASE CONTACT PROGRAM DIRECTLY FOR INFORMATION.***

Program Description

The Missouri Health Sciences Psychology Consortium (MHSPC) is located near the campus of the University of Missouri. This internship, with its scientist-practitioner model, is intended to enhance current skills, develop new skills, and encourage personal and professional growth. The primary objective of the internship is to provide integrated and flexible learning experiences to assist in the emergence of competent, ethical, and professional psychologists. This objective is achieved through the following methods: (a) training in a breadth of clinical skills central to the practice of psychology; (b) training in content areas relevant to an intern's career goals; and (c) training in the ethical and professional standards that form the basis of psychological practice. The MHSPC is organized as a Consortium involving three separate agencies which provide major/minor block training experiences. The agencies are the Harry S. Truman Memorial Veteran's Hospital, Missouri Psychiatric Institute, and University of Missouri School of Health Professions Department of Health Psychology. They are all located in reasonably close proximity which permits interns to design an internship experience uniquely relevant to their particular interests and goals. The Consortium provides supervision from a diverse group of psychologists with specialized areas of expertise. Toward strengthening diversity awareness, the training program recognizes and cherishes the dignity of each individual regardless of age, culture, faith, ethnicity, race, gender, sexual orientation, disability or social class. The training program is motivated to expose the intern to depth and breadth of training opportunities while further promoting a culture of learning, appreciation, and understanding. The multicultural experience is an important part of the training year and the array of activities throughout the year adds to an internship experience that is beneficial in years to come.

Program Description

At FSH, we offer two internship programs, General Treatment (program code 178311) and Forensic Evaluation (program code 178312). Each program is organized into two, six-month major rotations and two, six-month minor rotations (i.e., Program Evaluation and Psychological Assessment). In the General Treatment program, interns receive training in innovative, evidenced-based treatment and best practices within nationally recognized treatment programs targeting specific populations. Offered programs involve individuals with 1) intellectual/developmental disabilities, 2) severe mood & behavioral dysregulation (New Outlook Program for Behavior and Mood Self-Management), 3) moderate & long-term mental disorders with resultant symptoms & behavior challenges (Program for Recovery & Self-Motivation), 4) illegal/inappropriate sexual behaviors (Sex Offender Treatment Services), 5) those who have been civilly committed as Sexually Violent Predators (Sex Offender Rehabilitation & Treatment Services), and 6) serious mental illnesses resulting in significant functional impairment (Social Learning Program). For the Forensic Evaluation program, interns gain exposure to the legal system and the interaction between the courts and the mental health system, develop an advanced understanding of DSM diagnoses, and gain experience with both structured and unstructured psychological assessments within a forensic context (i.e., malingering, neuropsychological screening, intelligence, etc.). Interns are exposed to various Court-ordered evaluations including, but not limited to competency to stand trial, criminal responsibility, and sexually violent predator evaluations. This program also involves a six-month major rotation in a treatment program (1-6 described above). Throughout the year, all interns will also participate in a weekly seminar series covering a wide range of relevant topics. They will also participate in the hospital's research team for the required Program Evaluation minor. During this rotation, interns will receive real-world experiences in ongoing program improvement processes throughout the hospital to enhance client service delivery. FSH has extensive databases used to inform clinical decision-making process throughout the hospital. Finally, interns will also gain experience in various types of psychological assessments during the required Psychological Assessment minor.

Program Description

CMH is a tertiary care pediatric medical center. The psychology internship is within the division of Developmental and Behavioral Sciences which incorporates psychology, psychiatry, developmental pediatrics, and social work. The internship program offers two separate tracks. The Clinical Child Track includes a year long outpatient experience and three clinical specialty rotations: behavioral pediatrics/ADHD, special needs/autism, eating disorders. The Pediatric Track includes a year long inpatient consultation/liaison with outpatient follow-up and three medical specialty rotations: pain management, neuropsychology, and a selected medical subspecialty clinic. For general outpatient clinical experiences we serve a diverse population with a wide variety of presenting problems, including ADD, LD, behavioral problems, affective disorders and developmental disabilities/autism. The pediatric populations are served by the following clinics: Endocrine, GI, Hematology/Oncology, Rehab. Medicine, Pain management, Pulminology, Nephrology, and others. Interns are part of multidisciplinary teams that include a variety of medical and mental health professionals. An individualized research experience is offered and tailored to each intern's needs and interests and is supplementary to the intern's clinical focus during the year.

Program Description

The overall goal of the internship at the UMKC Counseling Center is to prepare competent, culturally sensitive professionals with knowledge, skills, and competencies necessary for successful employment as practicing psychologists. Our Developmental-Apprentice-Practitioner (DAP) model emphasizes purposeful, developmental, challenging hands-on experiences with mentorship and increasing autonomy throughout the year. We view our interns as colleagues and enjoy getting to know them as individuals. We value diversity and incorporate it into all aspects of training. Furthermore, diversity is reflected in the clients seen at our center with a large non-traditional population of varying racial and ethnic backgrounds who are in undergraduate, graduate, and professional programs (e.g., law, medical, dental, pharmacy). While many students do present with developmental concerns, our clients often present with significant mental health issues. Interns engage in the delivery of traditional counseling center services in an urban university setting including individual, couple, and group therapy as well as outreach and consultation. In addition, interns participate in year-long seminars and direct experience in assessment, multiculturalism, and supervision of trainees. Our model allows our interns the flexibility to individualize their experience through special focus rotations each semester; examples include eating disorders, administration, outreach, or special populations. Please visit our website and click on Doctoral Internship for a complete program description.

Program Description

The internship program is located at the Robert J. Murney Clinic at Forest Institute, a training clinic associated with The School of Professional Psychology at Forest Institute. The internship program provides a variety of training opportunities: individual therapy for children, adolescents, and adults; pre-marital, marital, and couple therapy; family therapy; group therapy; primary care psychology; psychoeducational groups; and psychological evaluations. In addition, Forest Institute is affiliated with numerous other mental health facilities in the greater Ozarks area that provide additional training opportunities. Mandatory experiences include outpatient treatment, crisis intervention, assessment services, exposure to diverse clientele, community and outreach activities, program development and delivery, and education/consultation. Interns are also required to supervise beginning practicum students, while receiving intensive supervisor training. As their interests dictate, interns may assume teaching assignments in the academic program with The School of Professional Psychology at Forest Institute. Additional experiences in administration, program development, and consultation can be elected. As Forest Institute internship faculty maintain a strong focus on fostering the development of interns, supervision and training are priorities. Supervisor backgrounds and theoretical orientations are varied, including cognitive-behavioral, psychodynamic-interpersonal, family systems, and primary care psychology. Exposure to empirically validated treatment models is valued and is incorporated in training and delivery of professional services. At the same time, understanding "self-as-instrument" is emphasized and becomes a focus in the intern supervision group. Moreover, internship faculty emphasize mentorship, encouraging intern-supervisor collaboration across a range of psychological functions, including teaching, supervising, consulting, assessment and psychotherapy.

Program Description

The objective of the internship is to provide each intern with training experiences under the supervision of experienced psychologists in a variety of patient care settings. To attain this objective, each intern has a sequence of rotations at the U.S. Medical Center in addition to several treatment and didactic activities that run for the entire year. Interns complete three major four-month rotations which focus on 1) inpatient psychiatric treatment, 2) psychological assessment, with some emphasis on forensic evaluation, and 3) behavioral medicine and neuropsychology. Interns also complete three secondary, four-month rotations, in which they work six to eight hours per week running inpatient groups, working in the Work Cadre Unit (that is, the general prison population), and working in the Residential Drug Abuse Treatment Program/Substance Abuse Program. Because much can be learned from long-term psychotherapy beginning of the year. Neuropsychology track interns spend their first 2 quarters of training in neuropsychology and neurorehabilitation clinics. Interns attend all of our Psychology Grand Rounds and Psychology Service meetings and many participate on psychology service councils (Practice Council, Cultural Competency Council) or hospital committees. Didactics include case presentations and intern-selected special topics. Enrichment seminars focus on instruction in 5 EBP therapy models and clinical supervision.

We have 5 general internship positions and 1 neuropsychology track position. Our training clinics include: PTSD 1 (veterans from era 2000 and before), PTSD 2 (recent eras), polytrauma/TBI rehabilitation, mental health clinic, inpatient psychiatry, primary care mental health integration, health promotion/disease prevention, mental health intensive case management (SMI case management), psychosocial recovery (SMI rehabilitation services), spinal cord injury, senior veterans clinic, and neuropsychology. We have at times offered a select rotation in the women's clinic as well as home-based primary care. We continue to expand our training programs with new VA initiatives and local partnerships. We anticipate future programs in our pain clinic and the homeless veterans program, and we are actively working toward a collaborative position with a local oncology hospital.

Our psychology staff works within a collegial environment where relationships and leadership are valued. Supervision is viewed to be a developmental process whereby interns are supported and challenged toward achieving benchmarks in competencies recommended by APA. All of our psychology supervisors are licensed doctoral psychologists.

We are looking for accomplished intern applicants for whom our model of training appeals, who will inspire our discipline, and who are excited at the possibility of treating veterans within our richly diverse St. Louis community.

Program Description

The Heart of America Psychology Training Consortium (HAPTC) is a collaborative consortium consisting of psychological service centers throughout the Midwest focused on provision of services in rural health care. In 2013, HAPTC split into two regions, the Central Region, comprised of sites in Missouri and Arkansas, and the Great Lakes Region in Indiana. The Executive Training Office for HAPTC is located in the Central Region at Forest Institute in Springfield, Missouri.

HAPTC seeks to train entry-level clinicians in how to integrate the discipline and practice of clinical psychology employing an empirically-informed competency-based practitioner-scholar model. The program provides experiences in clinical learning environments that are responsive to the diverse and changing needs of the human community. HAPTC provides psychology interns the opportunity to take substantial responsibility for fulfilling major professional and psychological functions in the context of appropriate supervisory support and professional role modeling. HAPTC also partners with various organizations including academic programs, community agencies, private hospitals, and independent practitioners to provide a graded, cumulative and sequential training environment. The objective of the internship is to prepare entry-level practitioners to function effectively in a variety of mental health settings and to provide services to a variety of populations in rural health care.

HAPTC believes that the competent practice of psychology requires an integration of scientific and professional knowledge, skills, and attitudes. Thus, HAPTC's internship training incorporates diverse psychological theories, approaches, and perspectives that are designed to prepare psychology interns for a broad range of professional roles, activities, and settings. The program is sequenced and organized around integration of science with professional practice. The training program is also attuned to the continually expanding scope and evolving nature of the field and the likelihood that Clinical Psychologists will engage in multiple roles over the course of their professional careers.

Applicants can apply to as many sites within the Consortium as they wish, but due to the restrictions of the application, only one cover letter can be submitted. Please be specific in your cover letter as to which site(s) you are applying and why you feel you are a good fit.

Program Description

This nationally recognized integrated healthcare system is a beacon for regional healthcare in Southwest Missouri, Northwest Arkansas, Northeast Oklahoma, and Southeast Kansas. Delivering mental health care services for over 60 years has resulted in high quality services that have a multidisciplinary base. Inpatient services to adults and geriatrics include psychiatric and psychological assessment, various psychological therapies using individual, marital, family, and group formats. Rotations with neuropsychology, addictions, pain, and ethics are available.

Program Description

Our APA accredited internship at the VA St. Louis Health Care System is designed to offer interns with extensive experience in providing care to an adult veteran population with particular emphasis upon evidence-based treatments oriented within a recovery, rehabilitation, and wellness framework. Our health care system includes two main campuses and other community-based facilities within St. Louis and the surrounding metro areas. Nearly all of our training rotations offer experiences with multidisciplinary teams. The weekly structure for internship includes 3 days spent on major rotations for 3 months, 1 day spent in a year-long concentration, independent therapy cases (2-3 cases carried on an ongoing basis), didactics, supervision with rotation/concentration and preceptor supervisors, and allotted time for group professional development at the

Please provide two samples of your written professional work. One should be a psychological evaluation; the other should be a therapy case summary that includes a case conceptualization and a summary of the course of treatment.

Program Description

The St. Louis Psychology Internship Consortium (SLPIC) offers exceptionally rich and in-depth learning opportunities for interns. As junior staff members, interns become immersed in providing psychological services to populations in which the full range of psychopathology is exhibited. SLPIC is unique in offering three inpatient rotations (both adult and child), two distinct forensic placements (inpatient and maximum security sex offenders treatment center) and opportunities to work in outpatient mental health settings. Because of the breadth and depth of training received, SLPIC interns develop superb capabilities to work effectively within multidisciplinary treatment teams in various milieus and to generalize their skills across settings, making them competitive contenders for post-doctoral positions and career paths of many kinds. As a direct result of SLPIC's strong commitment to training, interns benefit from abundant and in-depth supervision from multiple supervisors at the various sites throughout the training year. We invite you to visit our website (www.umsl.edu/slpic) to learn more about us and how we can meet your individual training needs. The program adheres to the University of Missouri Collected Rules and Regulations Policy #320.010: "The Curators of the University of Missouri do hereby reaffirm and state the policy of the University of Missouri on Equal Employment/Educational Opportunity. Equal Opportunity is and shall be provided for all employees and applicants for employment on the basis of their demonstrated ability and competence without discrimination on the basis of their race, color, religion, sex, sexual orientation, national origin, age, disability, or status as a Vietnam era veteran."

Program Description

Practitioner-scholar training model informed by theory, scholarship and research. Strong emphasis on enhancement of clinical skills under close supervision. Opportunities for guest lecturing, assessment, outreach, diversity. Optional rotation at State Psychiatric Hospital or outpatient department at Crow IHS Hospital.

The training program at CPS is highly focused on advancing clinical skills. It affords interns an opportunity to refine already developed therapy skills in a number of arenas (individual, couples, group). Extensive and in-depth supervision is provided to facilitate this process. Other components of the training program include: diversity (e.g. clients of differing racial/ethnic, religious/spiritual, national/language, sexual orientation, mental/physical ability, age, or socioeconomic status, and other diverse backgrounds), assessment, outreach/consultation, provision of supervision, crisis intervention, and a variety of training seminars. The unique 13 week summer rotations at the Crow Indian Reservation or Montana State Hospital provide intensive opportunities in working with American Indian people or patients with serious mental illness. The internship allows for some flexibility to individualize the training year. All of this is done in a challenging and highly supportive environment. The staff is very invested in interns' training and professional development, and values the interns' contribution to the Center as well. Former interns have consistently evaluated the program as being collegial, supportive, growth promoting, and transformative in the transition to becoming autonomous professionals.

Program Description

The NICPP adheres to a scientist - practitioner approach to psychological practice within an ecological-developmental framework. Although the exact goals of each of the agencies may differ to some extent, all are committed to a training philosophy that emphasizes ethical problem solving; evidence-based assessment and intervention practices; access to supervision that facilitates reflective, scientifically-based practice and to other resources supportive of this goal; access to diverse clients; research activities; and to a training plan that combines experiential learning with other modes of education. Specific training objectives include assisting interns to: (a) apply ethical decision making to complex clinical and research activities; (b) deepen their understanding of the role of psychology as a science and a practice in many professional settings; (c) refine their commitment to life-long scholarship and contributions to the science and practice of psychology; and (d) develop competencies to evaluate the efficacy of work with diverse clients and systems.

Program Description

NMHC-PIP offers an internship program that is designed to offer a structured experience covering not only a wide variety of psychological services across diverse populations, but also the business and administrative knowledge necessary for today's practitioners via dynamic and service oriented agencies. NMHC has grown to be one of Nebraska's largest providers of mental health services with three offices covering eastern and southeastern Nebraska. The central office is a 5,400 square foot facility in Lincoln, offering coordinated care with an adjoining family medicine clinic. NMHC's philosophy has led to the steady growth. NMHC has experienced and is fueled by work ethic and top quality services provided by its employees. It is with much enthusiasm that NMHC offers an internship to new psychologists providing them with the same knowledge, acumen, and personal characteristics that have led NMHC to become one of the premier psychological service providers of the Midwest. Web Site: www.nmhc-clinics.com.

Program Description

Our training program espouses the local clinical scientist model and prepares interns for clinical practice in community mental health settings. Interns will have the opportunity to develop expertise in providing treatment to children and adults with severe emotional disturbances, and families challenged by complex, multi-systemic issues. Interns serve on multi-disciplinary teams that offer a broad range of mental health services and emphasize inter-agency collaboration. We are interested in ensuring that interns develop competency in the basic clinical activities required of psychologists and preparing them for the multiple roles required of future psychologists. The training program is housed at Riverbend Community Mental Health, Inc. Intern positions involve year-long primary and secondary placements. The sites include the Children's Intervention program (ChIP) and our Franklin office in a rural community approximately 30 miles away. The ChIP rotations focus on intervention with children and families with severe emotional disturbances and include training in school-based mental health clinics. Three different foci are offered: Young Children and ASDs, Trauma and Assessment, and DBT. Our Franklin site epitomizes our commitment to accessible services for underserved populations. The Child and Adult teams at the site are secondary rotations for interns. Our affiliation with Concord Hospital includes intern placements in integrated primary care settings at the hospital clinic and rural satellite office. Interns participate in a weekly seminar training series addressing the assessment and intervention of individuals, families, and systems with a particular focus on their application to our community settings. The seminars emphasize the ethical and professional development of interns by encouraging self-reflectivity. Supervision involves videotape review of sessions including faculty case presentations.

Program Description

The Counseling Center offers a comprehensive training experience for interns working toward doctoral degrees in counseling or clinical psychology. The internship program provides supervision in individual and group therapy, crisis intervention, outreach and consultation, supervision, learning disabilities assessment, administration, and program development. Members of the professional staff represent various theoretical orientations and provide numerous opportunities for supervision. Interns receive a minimum of two and one half hours of individual supervision and two hours of group supervision weekly as well as participate in specialized training seminars, which complement the intern's clinical experience. Interns are highly valued members of the professional staff and are expected to participate in the business and staff development activities of the Center. Our program is based on a practitioner-scholar model and apprenticeship process of intern training in which staff and interns work collaboratively. While each staff person maintains their own theoretical orientation, all staff value and acknowledge the importance of relationship in all aspects of their work. The supervisor/mentor serves to facilitate the learning of clinical and therapeutic skills, and advancement in psychology as a profession. During the first few weeks of internship, interns and supervisors share tasks such as intake and emergency coverage, with interns assuming more responsibility and autonomy as they are ready. Other shared activities may also include co-therapy and co-facilitating seminars and workshops. Although the internship program is relatively structured, there is enough flexibility to individualize training activities to meet interns' specific needs and interests.
