Program Description

The Indian Health Board of Minneapolis, Inc. (IHB) is a Federally Qualified Health Center (FQHC). It is a nonprofit, culturally specific health care agency that provides medical, dental, mental and chemical health services to children, adolescents, and adults. Within the outpatient mental health department, clients served include about 73% American Indian, 14% Caucasian, 7% African American, and 6% other races. Training within Counseling & Support is based on a practitioner model with a primary goal of equipping emerging mental health professionals with the highest quality skills for addressing the health disparities and mental health needs of the American Indian community in a culturally sensitive and proficient way. Theoretical orientations of staff are varied and include conceptualization from object relational, systemic, interpersonal, psychodynamic, feminist and cognitive behavioral perspectives. The two primary rotations are outpatient, with adults and children, and in vivo services provided within a magnet school setting one morning weekly. The mental health department, called the Counseling & Support Clinic, serves roughly 70% adults and 30% children and families. Individual and family therapy, group therapy, child and adult assessment, chemical health assessments, social work, and psychiatric services are provided on-site. The department participates with the IHB Medical Clinic in a collaborative effort to reduce health disparities, and opportunities for consultation with Medical Clinic providers are also available. The department also prides itself on training students in cultural proficiency skills aimed toward the urban American Indian community. The agency provides trainees with a wealth of diverse clinical experiences and training opportunities, including urban outpatient treatment, psychological evaluations, collaborative opportunities with culturally-specific schools and other agencies, and topic- or diagnosis-specific group therapy. Many interdisciplinary resources are available to interns, both onsite and in collaboration with other agencies and organizations. Staff is committed to working with urban and culturally diverse children and families, with specialized focus and services on the urban American Indian community.

Program Description

The Predoctoral Psychology Internship program at Washburn Center for Children provides training in assessment and intervention with children, adolescents, and families from diverse urban and suburban populations in the Outpatient Department within a well-established community mental health center. Clinical experiences include: diagnostic intakes and individual, family, and group therapy within the Outpatient Department; and, psychological evaluations on clients referred from all of Washburn's programs (e.g., Outpatient, Day Treatment, Crisis Stabilization). The Predoctoral Psychology Internship provides broad-based clinical training, with the opportunity to explore in more depth potential areas of specialization such as multicultural treatment or treatment of clients who have experienced trauma. Training seminars provide Interns with a general background in many areas such as development, specific interventions (e.g., play therapy, TF-CBT, DBT, EMDR), varied clinical topics, multicultural issues, and supervision. Weekly individual supervision is provided by two staff psychologists, as well as a postdoctoral fellow. Two hours of group supervision/week with the Intern cohort are facilitated by staff psychologists. Interns also have the opportunity to develop supervisory skills through providing weekly supervision to a predoctoral practicum student. Interns spend approximately 50% of their time in direct clinical service; the remainder of their time is spent in training seminars, team case consultations, support activities (e.g., care coordination, consultation, clinical documentation), and individual/group supervision. At the onset of Internship, Interns are asked to identify their training interests, goals, and skills. In this way, their supervisors can, as much as possible, refer therapy and assessment cases to Interns that are commensurate with their skills and clinical interests.

Program Description

The Minneapolis Internship Consortium internship is a full-time, 12-month clinical experience which typically begins in August. The training program is firmly rooted in providing community mental health service to underserved populations. In addition, interns have the opportunity to develop and fine-tune skills as a practitioner-scholar. The primary method of training used is experiential, i.e., learning by doing. § INTERNSHIP SITES The Consortium has two separate programs, corresponding to its two participating agencies. In the APPIC match process, prospective interns apply to their preferred agency. Subsequently, they spend the majority of their training week at that agency. One day per week, the interns rotate to the other agency for specialized training at that site. Park Avenue interns rotate one day per week to the Interprofessional Center for Counseling and Legal Services (IPC). In this setting, they have the opportunity to learn how to administer, score, and interpret a variety of assessments that might address the areas of personality, emotional/behavioral functioning, cognitive, career, neuropsychological screening, and/or ADHD/LD concerns. As part of the internship assessment experience, while at the IPC, interns attend didactic seminars which include supervision of supervision, assessment, and diversity. They are also assigned, on average, one to two clients per week for whom they conduct a clinical interview and interpret test results. IPC interns rotate one day per week to Park Avenue Center. During that day, they will lead or co-facilitate a group. Typically, the intern has a caseload of 2-3 clients for individual therapy. In addition, the intern will occasionally assist with crisis intervention for clients when the assigned student therapist is unavailable. Finally, the intern attends the weekly therapy seminar with the other doctoral interns. A full description of each site is available at www.angelfire.com/psy/parkavenuecenter/intern.pdf

Program Description

The MSOP Psychology Pre-doctoral Internship Program is best suited for students seeking experiences within a secure program providing sex offender treatment to civilly committed clients that will compliment their previous training. Successful applicants will possess a solid foundation in psychological assessment and therapeutic intervention, will have completed or be in the process of completing a formal dissertation, and must have successfully defended the dissertation proposal prior to the internship start date. Doctoral students from Clinical and Forensic Psychology programs who have obtained approval from their faculty and are internship-eligible may apply. Students from APA-approved programs are preferred. MSOP is an Affirmative Action and Equal Opportunity Employer.

Program Description

Nystrom & Associates, Ltd. is a Rule 29 mental health clinic that offers a wide variety of services including outpatient therapy, group therapy, adult day treatment, Dialectical Behavior Therapy, chemical dependency treatment and groups, sessions with a nutritionist, psychiatric services, Adult Rehabilitative Mental Health Services, and home-based family therapy. There are seven Nystrom & Associates, Ltd. clinics in Minnesota and two in the state of Washington. Each clinic mirrors the other and provides the above listed services to individuals of all ages, gender, ethnicity, and spiritual background. The goal of Nystrom & Associates, Ltd. internship training program is to provide interns with opportunities to learn about and implement a variety of clinical psychological services. The internship will consist of opportunities to gain experience in the area of psychological assessment and intervention. One goal that this internship focuses on is learning about and implementing a clinical psychological evaluation, including conducting new patient diagnostic assessment interviews with a variety of clients from the ages of 3 and up, evaluating clients using a variety of psychological assessment tools, creating comprehensive psychological evaluation reports, sharing psychological evaluation results and recommendations with clients, and making appropriate recommendations and referrals based on the client's unique issues. The objective is to give interns experience and knowledge in the area of psychological evaluations that implement the use of clinical interviews and a variety of psychological assessment tools that help with clarifying and diagnosing mental health disorders and personality disorders, help with assessing cognitive ability and adaptive functioning, evaluate for the presence of attention and learning disorders, screen for possible cognitive or memory impairment, evaluate for pervasive developmental disorders, assess for ability to emotionally deal with surgery, and help in identifying any possible emotional or behavioral issues. NAL also offers individual and group psychotherapy for individuals struggling with a variety of issues including anger management, grief and loss, depression, anxiety, chemical dependency, and more. NAL mental health professionals are committed to meet with individuals to best serve a wide variety of populations and diagnoses. Our goal is to meet individuals where they are in their own journey, valuing their individual strengths, viewpoints, and challenges. We work together with the individual, child and family to find the paths that lead to the most successful outcomes. Group therapy provides individuals with a peer support system that allows them the opportunity to share and discuss issues with those going through similar situations themselves, all the while being directed and led by a highly qualified mental health professional. Another goal of the internship is to provide the interns with the opportunity to learn about the process for co-leading and/or creating a group therapy experience, work on creating a therapeutic group of their own, consulting with supervisors, Nystrom & Associates, Ltd. mental health professionals, and peers to help identify needs and ideas for the focus of the therapeutic group, consult with supervisors in getting approval for the group and helping with marketing the group, and co-facilitate this group and/or other already created groups with other interns and licensed mental health professionals. In addition to providing interventions through a group therapy experience, interns will also work with clients on an individual basis in a therapeutic session. Interns will work with children, adolescents, and adults in providing psychotherapy and creating treatment plans that best meet the client's area of need and concern. Interns will have opportunities to observe and shadow a therapist in a psychotherapy session, act as a co-therapist in a psychotherapy session with another therapist, and have clients of their own that they see regularly for individual psychotherapy sessions. Each psychotherapy client will have an initial new patient diagnostic assessment (intake interview) followed by regularly scheduled weekly individual psychotherapy sessions. An additional goal of this internship is to provide the interns with a breadth of opportunities to learn about all of the services offered at Nystrom & Associates, Ltd., observe sessions related to these services, consult with other healthcare professionals, and to learn about a number of healthcare services that can be helpful to continue the client's care and meet their needs. Other goals of this internship experience are to provide opportunities for clinical case consultation, clinical supervision, socialization with other mental health professionals and interns, and to provide an opportunity for frequent clinical didactic trainings on a variety of mental health topics.

Program Description

We are a behavioral health CMHC with a broad level of community involvement and many innovative programs. The staff enjoy training and interns are accepted as valued colleagues. They get to play important roles in the assessment and treatment of a broad range of persons. Canvas Health has a strong role in evaluation services to the court and social services system, and interns are trained in doing many types of evaluations used by county departments, as well as for other internal and community needs. Interns are involved in the assessment and treatment of persons with a broad range of conditions and functioning, serve the emergency services system, crisis clinic and the jail. Canvas Health trains interns to serve persons with serious and persistent mental illness and children with severe emotional and behavior disturbance. Child interns do a 6 month rotation in a home-based family therapy program serving seriously emotionally disturbed children and adolescents, and adult interns serve a 6 month rotation in an outpatient day treatment program. Other experiences include a year long assessment rotation and outpatient rotations, and year long DBT rotations. Canvas Health has a growing FASD and neurodevelopmental clinic and a developing integrated care program that interns may receive supervised training in. Canvas Health uses many evidence-based treatments and assessments. A large base of clinical data from the agency's outcomes instruments is available for research projects. Interns and staff presented research using this database at APA in 2010, 2011 and 2012. In 2013, an intern and staff will present at the Collaborative Family Healthcare Association conference. Canvas Health welcomes applicants from diverse racial, ethnic, and cultural backgrounds. We have developed all documentation in Spanish. We are growing programs into other metro counties and serving a broader range of diverse persons. The psychologist group and the training program have a creative and committed focus on diversity and equity training.

Program Description

FMC Rochester serves federal inmates with significant medical and mental health needs. We offer a variety of treatment modalities. Interns have a year long rotation in mental health (half time) and spend approximately four months on three different rotations(half time): drug abuse treatment, assessment (e.g., forensic, neuro-psychological, and personality/intellectual), and general population. Please see our website for additional information, www.bop.gov/

Program Description

The basis of our training program is an integrated sequence of learning opportunities within a developmental focus, and our training model is practitioner-scholar. The internship has a dual focus on both clinical training and professional growth. We believe that people learn and work best in a supportive, collegial atmosphere; therefore we provide an environment in which we expect interns to stretch, take risks and grow into confident, competent, ethical psychologists who are able to empower their clients and colleagues. We expect that each intern will finish the training experience with competencies in the following areas: Individual Therapy, Career Counseling, Group Therapy, Consultation and Outreach, and Supervision. Diversity and multiculturalism are key values for our counseling center, in addition to professionalism and ethical practice. Within the competency areas, there are opportunities for working with special populations of interest to the intern. One of the strengths of our program is the breadth of supervision interns receive: up to 8 hours per week in both individual and group formats with a variety of supervisors. Interns and supervisors set learning contracts at the beginning of each semester, and use these actively to ensure that interns' needs and desires are met. A highlight of the interns' training week is the Intern Seminar, and most weeks we are joined for seminars by interns from the University of Minnesota's counseling center. Specialists from both within and outside the two universities are invited to speak on various topics, including but not limited to ethics, empirically-supported treatments, assessment, diversity issues and multicultural counseling, and counseling students with specific psychological disorders. We also provide seminars on job search and licensure procedures, and we encourage interns to visit psychologists in various local agencies to learn more about practice in a variety of settings.

Program Description

The internship emphasizes clinical work with a major focus on diagnostic assessment and individual psychotherapy. The MMPI-2 and other assessment tools are used. Familiarity with MMPI-2 is required. Students learn and experience the role of a clinical psychologist in an outpatient setting: providing psychotherapy, doing personality testing and test interpretation, providing test result feedback to patients and therapists, attending consultation meetings and seminars, maintaining written records, collaborating on medication management with on-site psychiatrists, arranging referrals to other agencies, and learning the ethical and legal considerations involved in service delivery to a diverse patient population. Students receive intensive supervision throughout their training including: two hours/week of individual supervision, one hour/week of discipline-specific group supervision and one hour/week of group consultation in a multidisciplinary team format. Education for students includes weekly seminars on various psychotherapy topics. Past offerings have included: Basic Psychodynamic Theory and Therapy, Attachment and Empathy, Transference, Countertransference, Personality Disorders, Couples Therapy, Cross-Cultural Competence, Resistance, The Grief and Loss, Working with Seniors, and other clinical and theoretical issues of importance. The clinic is committed to cultural diversity in populations served and in all hiring and training practices.

Program Description

The Emily Program provides comprehensive psychological, nutritional, and medical care for individuals with eating disorders within outpatient and residential settings. The multidisciplinary staff includes psychologists, social workers, marriage & family therapists, dietitians, and physicians. Psychological Assessment Training Interns initially observe a licensed psychologist conducting the assessment battery in conjunction with weekly supervision with this psychologist. Upon seeking services at the Emily Program, each client completes an evaluation process that consists of the following assessment dimensions: diagnostic interview, personality assessment, eating disorder inventories, depression and CD screening. After observing and then practicing this assessment process with the supervisor, Interns then conduct and write-up the assessment process under supervision. Skills in the interview process, assessment interpretation, DSM-IV diagnosis, and treatment planning are enhanced through this progressive process. Psychological Intervention Training The Emily Program believes that eating disorders are multi-determined problems. Effective treatment requires awareness of the genetic, biological, psychological, social, and cultural impacts on each person. Our holistic and humanistic approach is based on the belief that individuals are unique and that they intuitively seek meaning, value, and creativity in life. We believe that individuals have choices to make and responsibilities to uphold for themselves and in the context of community. We do not believe that eating disorders are a choice or a moral failing. We believe that given a supportive and understanding environment, individuals can make healthy choices about their recoveries and the future directions of their lives. Please see The Emily Program website for the Internship Brochure for further program description.

Program Description

SOFS is an APA-Accredited internship site, initially accredited in 2012 for a period of 7 years. The Psychology Department at State Operated Forensic Services (SOFS) offers an internship program for students completing their doctoral degree from Clinical and Counseling Psychology Programs. SOFS is comprised of secure and semi-secure inpatient psychiatric facilities. Patients come to SOFS on an involuntary basis, and are sometimes committed by the courts for evaluation or treatment. SOFS also serves as a statewide treatment facility for persons found not guilty or unable to stand trial by reason of mental illness. SOFS treats a patient population that is both clinically and demographically diverse. Our patients have a very wide range of diagnoses, covering virtually all the major categories of the DSM-IV-TR. The most common primary diagnoses include Schizophrenia-spectrum disorders, affective disorders (primarily Bipolar Disorder), and Antisocial and Borderline personality disorders. Many of our patients have committed sexual offenses, and have corresponding diagnoses of paraphilias. Additionally, many patients have primary or secondary diagnoses of substance abuse, borderline intellectual functioning, and anxiety disorders. SOFS consists of eleven programs and training experiences are available in several of these, including the Minnesota Security Hospital, Forensic Transition Services, and Good Lives Day Treatment Program, with additional experiences with young adults, sex offense, and competency restoration being offered based on intern interest and staffing availability. The program brochure is available on our website and any additional questions regarding the program may be emailed to the training director.

Program Description

Our APA-accredited predoctoral Internship training program adheres to a generalist training model offering a broad range of training opportunities. Our goal is to help Interns become competent, ethical and thoroughly trained professional psychologists who will go on to distinguished careers. We have a diverse training faculty and adult patient population situated in a large medical center setting. In addition to assessment and intervention training and supervision, interns will consult and work with a variety of other disciplines who particularly value psychological input. Interns attend weekly seminars (cognitive and neuropsychology, diagnostics and psychopathology, EBTs and special topics, psychological assessment and professional issues) and other educational activities designed to broaden and hone their professional development. Four three-month rotations including inpatient psychiatric, outpatient mental health (including women's mental health), outpatient PTSD program, health psychology/behavioral medicine, geropsychology, home based primary care, integrated primary care, and residential PTSD treatment program. Part-time rotations in neuropsychology, research, and administration may be selected with prior approval of the supervisor and Training Director. At the end of each rotation, comprehensive written competency evaluations are required with supervisors rating Interns and Interns rating the rotation and supervisor. For more detailed information about rotations, seminars, training faculty, etc., please visit our website. In 2010, we received another 7 years of continuous accreditation. In 2003, an APA Site Visitor indicated our program is "one of the better kept secrets in the VA." In reference to that comment, a recent APA Site Visitor stated, "the word must be getting out." During the 2010 site visit, the site visit team noted a total of nine exemplary practices. You will find a team of dedicated training faculty at our facility.

Program Description

The Pine Grove Behavioral Health & Addiction Services' Doctoral Internship in Professional Psychology (PG-DIPP) is an APA accredited program (accredited to 2018) which operates from a practitioner-scholar model. Our internship is committed to providing excellent training and supervision. Our training year consists of three rotations, each one lasting four months. The rotations are (1) Professional Enhancement Program (PEP), an intensive outpatient treatment program for impaired professionals where chemical dependency is not the primary focus; (2) Gratitude, a residential treatment program for compulsive sexual behaviors; and (3) Outpatient Services (OS) which provides psychological assessment and therapy services to adults, children and adolescents. On the OS rotation, the intern also has opportunities to assist with evaluations in our Evaluation Center which conducts comprehensive evaluations for impaired professionals who are typically referred by professional licensing boards or professional assistance programs. These rotations provide a broad range of experiences, and offer unique opportunities for specialized experiences with personality disorders, addictive disorders and treatment of disruptive behavior problems. Our interns perform psychological assessments and provide psychotherapy (which is primarily group therapy, with some opportunities for individual and/or family therapy). Our interns are active members of the multidisciplinary treatment team on each rotation, so they have opportunities to interact with physicians, social workers, case managers, family therapists and nurses. We believe the intensity and depth of training received in these treatment programs provides early career professionals with a strong foundation of core clinical competencies that are applicable and generalizable to other settings and populations. Interns get a generalist training and are exposed to a variety of supervisory orientations during the year. Our interns get experience with a diverse patient population, and they get experience with a wide range of disorders (including mood, anxiety, addiction and personality disorders). Trauma and addictions receive attention in all of our treatment programs. The interns receive weekly supervision (individual and group) with Mississippi Licensed Psychologists. We also provide didactic training sessions focused on strengthening a broad array of core competencies. These include evidence based/supported treatment, psychological assessments, professional ethics, working with trauma and other professional issues. In addition, a special project is required and due by June 15th. The purpose of this project is to provide interns with the opportunity to develop or strengthen their professional competencies in the areas of consultation, outreach, professional presentations and program development or evaluation. Hattiesburg is a small city with a population of approximately 45,000. It has a historic downtown, two universities (University of Southern Mississippi and William Carey University) and a park with a small zoo. It is also the regional center for medical treatment in this area of Mississippi with 2 hospitals, a large medical clinic and many specialized medical facilities. Hattiesburg has easy access to air travel, entertainment, sporting events, recreational facilities and cultural opportunities because it is within driving distance to the Gulf Coast, New Orleans LA, Jackson MS and Mobile AL. Hattiesburg has friendly and diverse population, affordability, good restaurants, shopping, scenic countryside and warm climate. See our website (www.pinegrove/treatment.com) for more details.

Program Description

Our APA-accredited predoctoral residency program endorses a cognitive-behavioral orientation within a scientist-practitioner model. Interest in and experience with this approach are important selection criteria. The residency year is divided into four three-month clinical rotations. Rotations available at UMC include: Adult Outpatient, Anxiety and Mood Disorders, Pediatric Psychology, Child Health Outreach, Child Inpatient, Neuropsychology, Insomnia, and Psychophysiology Disorders. Rotations at the VAMC include: Health Psychology, Trauma Recovery Program, Chemical Dependence Treatment, and Addictive Behaviors Consultation & Intervention. Additional clinical opportunities are available in the adult, child, and specialty clinics whereby residents gain experience working with longer-term cases. Although clinical training activities play a paramount role in our program, residents are required to actively maintain involvement in research as well. Continuing education and professional development didactics comprise an additional important component of training. *** INFORMATION MAY BE OUTDATED. PLEASE CONTACT PROGRAM DIRECTLY FOR INFORMATION.***

Other Application Requirements**Program Description**

The Missouri Health Sciences Psychology Consortium (MHSPC) is located near the campus of the University of Missouri. This internship, with its scientist-practitioner model, is intended to enhance current skills, develop new skills, and encourage personal and professional growth. The primary objective of the internship is to provide integrated and flexible learning experiences to assist in the emergence of competent, ethical, and professional psychologists. This objective is achieved through the following methods: (a) training in a breadth of clinical skills central to the practice of psychology; (b) training in content areas relevant to an intern's career goals; and (c) training in the ethical and professional standards that form the basis of psychological practice. The MHSPC is organized as a Consortium involving three separate agencies which provide major/minor block training experiences. The agencies are the Harry S. Truman Memorial Veteran's Hospital, Missouri Psychiatric Institute, and University of Missouri School of Health Professions Department of Health Psychology. They are all located in reasonably close proximity which permits interns to design an internship experience uniquely relevant to their particular interests and goals. The Consortium provides supervision from a diverse group of psychologists with specialized areas of expertise. Toward strengthening diversity awareness, the training program recognizes and cherishes the dignity of each individual regardless of age, culture, faith, ethnicity, race, gender, sexual orientation, disability or social class. The training program is motivated to expose the intern to depth and breadth of training opportunities while further promoting a culture of learning, appreciation, and understanding. The multicultural experience is an important part of the training year and the array of activities throughout the year adds to an internship experience that is beneficial in years to come.

Program Description

At FSH, we offer two internship programs, General Treatment (program code 178311) and Forensic Evaluation (program code 178312). Each program is organized into two, six-month major rotations and two, six-month minor rotations (i.e., Program Evaluation and Psychological Assessment). In the General Treatment program, interns receive training in innovative, evidenced-based treatment and best practices within nationally recognized treatment programs targeting specific populations. Offered programs involve individuals with 1) intellectual/developmental disabilities, 2) severe mood & behavioral dysregulation (New Outlook Program for Behavior and Mood Self-Management), 3) moderate & long-term mental disorders with resultant symptoms & behavior challenges (Program for Recovery & Self-Motivation), 4) illegal/inappropriate sexual behaviors (Sex Offender Treatment Services), 5) those who have been civilly committed as Sexually Violent Predators (Sex Offender Rehabilitation & Treatment Services), and 6) serious mental illnesses resulting in significant functional impairment (Social Learning Program).

For the Forensic Evaluation program, interns gain exposure to the legal system and the interaction between the courts and the mental health system, develop an advanced understanding of DSM diagnoses, and gain experience with both structured and unstructured psychological assessments within a forensic context (i.e., malingering, neuropsychological screening, intelligence, etc.). Interns are exposed to various Court-ordered evaluations including, but not limited to competency to stand trial, criminal responsibility, and sexually violent predator evaluations. This program also involves a six-month major rotation in a treatment program (1-6 described above).

Throughout the year, all interns will also participate in a weekly seminar series covering a wide range of relevant topics. They will also participate in the hospital's research team for the required Program Evaluation minor. During this rotation, interns will receive real-world experiences in ongoing program improvement processes throughout the hospital to enhance client service delivery. FSH has extensive databases used to inform clinical decision-making process throughout the hospital. Finally, interns will also gain experience in various types of psychological assessments during the required Psychological Assessment minor.

Program Description

CMH is a tertiary care pediatric medical center. The psychology internship is within the division of Developmental and Behavioral Sciences which incorporates psychology, psychiatry, developmental pediatrics, and social work. The internship program offers two separate tracks. The Clinical Child Track includes a year long outpatient experience and three clinical specialty rotations: behavioral pediatrics/ADHD, special needs/autism, eating disorders. The Pediatric Track includes a year long inpatient consultation/liaison with outpatient follow-up and three medical specialty rotations: pain management, neuropsychology, and a selected medical subspecialty clinic. For general outpatient clinical experiences we serve a diverse population with a wide variety of presenting problems, including ADD, LD, behavioral problems, affective disorders and developmental disabilities/autism. The pediatric populations are served by the following clinics: Endocrine, GI, Hematology/Oncology, Rehab. Medicine, Pain management, Pulminology, Nephrology, and others. Interns are part of multidisciplinary teams that include a variety of medical and mental health professionals. An individualized research experience is offered and tailored to each intern's needs and interests and is supplementary to the intern's clinical focus during the year.

Program Description

The overall goal of the internship at the UMKC Counseling Center is to prepare competent, culturally sensitive professionals with knowledge, skills, and competencies necessary for successful employment as practicing psychologists. Our Developmental-Apprentice-Practitioner (DAP) model emphasizes purposeful, developmental, challenging hands-on experiences with mentorship and increasing autonomy throughout the year. We view our interns as colleagues and enjoy getting to know them as individuals. We value diversity and incorporate it into all aspects of training. Furthermore, diversity is reflected in the clients seen at our center with a large non-traditional population of varying racial and ethnic backgrounds who are in undergraduate, graduate, and professional programs (e.g., law, medical, dental, pharmacy). While many students do present with developmental concerns, our clients often present with significant mental health issues. Interns engage in the delivery of traditional counseling center services in an urban university setting including individual, couple, and group therapy as well as outreach and consultation. In addition, interns participate in year-long seminars and direct experience in assessment, multiculturalism, and supervision of trainees. Our model allows our interns the flexibility to individualize their experience through special focus rotations each semester; examples include eating disorders, administration, outreach, or special populations. Please visit our website and click on Doctoral Internship for a complete program description.

Program Description

The internship program is located at the Robert J. Murney Clinic at Forest Institute, a training clinic associated with The School of Professional Psychology at Forest Institute. The internship program provides a variety of training opportunities: individual therapy for children, adolescents, and adults; pre-marital, marital, and couple therapy; family therapy; group therapy; primary care psychology; psychoeducational groups; and psychological evaluations. In addition, Forest Institute is affiliated with numerous other mental health facilities in the greater Ozarks area that provide additional training opportunities. Mandatory experiences include outpatient treatment, crisis intervention, assessment services, exposure to diverse clientele, community and outreach activities, program development and delivery, and education/consultation. Interns are also required to supervise beginning practicum students, while receiving intensive supervisor training. As their interests dictate, interns may assume teaching assignments in the academic program with The School of Professional Psychology at Forest Institute. Additional experiences in administration, program development, and consultation can be elected. As Forest Institute internship faculty maintain a strong focus on fostering the development of interns, supervision and training are priorities. Supervisor backgrounds and theoretical orientations are varied, including cognitive-behavioral, psychodynamic-interpersonal, family systems, and primary care psychology. Exposure to empirically validated treatment models is valued and is incorporated in training and delivery of professional services. At the same time, understanding "self-as-instrument" is emphasized and becomes a focus in the intern supervision group. Moreover, internship faculty emphasize mentorship, encouraging intern-supervisor collaboration across a range of psychological functions, including teaching, supervising, consulting, assessment and psychotherapy.

Program Description

The objective of the internship is to provide each intern with training experiences under the supervision of experienced psychologists in a variety of patient care settings. To attain this objective, each intern has a sequence of rotations at the U.S. Medical Center in addition to several treatment and didactic activities that run for the entire year. Interns complete three major four-month rotations which focus on 1) inpatient psychiatric treatment, 2) psychological assessment, with some emphasis on forensic evaluation, and 3) behavioral medicine and neuropsychology. Interns also complete three secondary, four-month rotations, in which they work six to eight hours per week running inpatient groups, working in the Work Cadre Unit (that is, the general prison population), and working in the Residential Drug Abuse Treatment Program/Substance Abuse Program. Because much can be learned from long-term psychotherapy beginning of the year. Neuropsychology track interns spend their first 2 quarters of training in neuropsychology and neurorehabilitation clinics. Interns attend all of our Psychology Grand Rounds and Psychology Service meetings and many participate on psychology service councils (Practice Council, Cultural Competency Council) or hospital committees. Didactics include case presentations and intern-selected special topics. Enrichment seminars focus on instruction in 5 EBP therapy models and clinical supervision. We have 5 general internship positions and 1 neuropsychology track position. Our training clinics include: PTSD 1 (veterans from era 2000 and before), PTSD 2 (recent eras), polytrauma/TBI rehabilitation, mental health clinic, inpatient psychiatry, primary care mental health integration, health promotion/disease prevention, mental health intensive case management (SMI case management), psychosocial recovery (SMI rehabilitation services), spinal cord injury, senior veterans clinic, and neuropsychology. We have at times offered a select rotation in the women's clinic as well as home-based primary care. We continue to expand our training programs with new VA initiatives and local partnerships. We anticipate future programs in our pain clinic and the homeless veterans program, and we are actively working toward a collaborative position with a local oncology hospital. Our psychology staff works within a collegial environment where relationships and leadership are valued. Supervision is viewed to be a developmental process whereby interns are supported and challenged toward achieving benchmarks in competencies recommended by APA. All of our psychology supervisors are licensed doctoral psychologists. We are looking for accomplished intern applicants for whom our model of training appeals, who will inspire our discipline, and who are excited at the possibility of treating veterans within our richly diverse St. Louis community.

Program Description

The Heart of America Psychology Training Consortium (HAPTC) is a collaborative consortium consisting of psychological service centers throughout the Midwest focused on provision of services in rural health care. In 2013, HAPTC split into two regions, the Central Region, comprised of sites in Missouri and Arkansas, and the Great Lakes Region in Indiana. The Executive Training Office for HAPTC is located in the Central Region at Forest Institute in Springfield, Missouri.

HAPTC seeks to train entry-level clinicians in how to integrate the discipline and practice of clinical psychology employing an empirically-informed competency-based practitioner-scholar model. The program provides experiences in clinical learning environments that are responsive to the diverse and changing needs of the human community. HAPTC provides psychology interns the opportunity to take substantial responsibility for fulfilling major professional and psychological functions in the context of appropriate supervisory support and professional role modeling. HAPTC also partners with various organizations including academic programs, community agencies, private hospitals, and independent practitioners to provide a graded, cumulative and sequential training environment. The objective of the internship is to prepare entry-level practitioners to function effectively in a variety of mental health settings and to provide services to a variety of populations in rural health care.

HAPTC believes that the competent practice of psychology requires an integration of scientific and professional knowledge, skills, and attitudes. Thus, HAPTC's internship training incorporates diverse psychological theories, approaches, and perspectives that are designed to prepare psychology interns for a broad range of professional roles, activities, and settings. The program is sequenced and organized around integration of science with professional practice. The training program is also attuned to the continually expanding scope and evolving nature of the field and the likelihood that Clinical Psychologists will engage in multiple roles over the course of their professional careers.

Applicants can apply to as many sites within the Consortium as they wish, but due to the restrictions of the application, only one cover letter can be submitted. Please be specific in your cover letter as to which site(s) you are applying and why you feel you are a good fit.

Program Description

This nationally recognized integrated healthcare system is a beacon for regional healthcare in Southwest Missouri, Northwest Arkansas, Northeast Oklahoma, and Southeast Kansas. Delivering mental health care services for over 60 years has resulted in high quality services that have a multidisciplinary base. Inpatient services to adults and geriatrics include psychiatric and psychological assessment, various psychological therapies using individual, marital, family, and group formats. Rotations with neuropsychology, addictions, pain, and ethics are available.

Program Description

Our APA accredited internship at the VA St. Louis Health Care System is designed to offer interns with extensive experience in providing care to an adult veteran population with particular emphasis upon evidence-based treatments oriented within a recovery, rehabilitation, and wellness framework. Our health care system includes two main campuses and other community-based facilities within St. Louis and the surrounding metro areas. Nearly all of our training rotations offer experiences with multidisciplinary teams. The weekly structure for internship includes 3 days spent on major rotations for 3 months, 1 day spent in a year-long concentration, independent therapy cases (2-3 cases carried on an ongoing basis), didactics, supervision with rotation/concentration and preceptor supervisors, and allotted time for group professional development at the

Program Description

The St. Louis Psychology Internship Consortium (SLPIC) offers exceptionally rich and in-depth learning opportunities for interns. As junior staff members, interns become immersed in providing psychological services to populations in which the full range of psychopathology is exhibited. SLPIC is unique in offering three inpatient rotations (both adult and child), two distinct forensic placements (inpatient and maximum security sex offenders treatment center) and opportunities to work in outpatient mental health settings. Because of the breadth and depth of training received, SLPIC interns develop superb capabilities to work effectively within multidisciplinary treatment teams in various milieus and to generalize their skills across settings, making them competitive contenders for post-doctoral positions and career paths of many kinds. As a direct result of SLPIC's strong commitment to training, interns benefit from abundant and in-depth supervision from multiple supervisors at the various sites throughout the training year. We invite you to visit our website (www.umsl.edu/slpic) to learn more about us and how we can meet your individual training needs. The program adheres to the University of Missouri Collected Rules and Regulations Policy #320.010: "The Curators of the University of Missouri do hereby reaffirm and state the policy of the University of Missouri on Equal Employment/Educational Opportunity. Equal Opportunity is and shall be provided for all employees and applicants for employment on the basis of their demonstrated ability and competence without discrimination on the basis of their race, color, religion, sex, sexual orientation, national origin, age, disability, or status as a Vietnam era veteran."

Program Description

Practitioner-scholar training model informed by theory, scholarship and research. Strong emphasis on enhancement of clinical skills under close supervision. Opportunities for guest lecturing, assessment, outreach, diversity. Optional rotation at State Psychiatric Hospital or outpatient department at Crow IHS Hospital.

The training program at CPS is highly focused on advancing clinical skills. It affords interns an opportunity to refine already developed therapy skills in a number of arenas (individual, couples, group). Extensive and in-depth supervision is provided to facilitate this process. Other components of the training program include: diversity (e.g. clients of differing racial/ethnic, religious/spiritual, national/language, sexual orientation, mental/physical ability, age, or socioeconomic status, and other diverse backgrounds), assessment, outreach/consultation, provision of supervision, crisis intervention, and a variety of training seminars. The unique 13 week summer rotations at the Crow Indian Reservation or Montana State Hospital provide intensive opportunities in working with American Indian people or patients with serious mental illness. The internship allows for some flexibility to individualize the training year. All of this is done in a challenging and highly supportive environment. The staff is very invested in interns' training and professional development, and values the interns' contribution to the Center as well. Former interns have consistently evaluated the program as being collegial, supportive, growth promoting, and transformative in the transition to becoming autonomous professionals.

Program Description

The NICPP adheres to a scientist - practitioner approach to psychological practice within an ecological-developmental framework. Although the exact goals of each of the agencies may differ to some extent, all are committed to a training philosophy that emphasizes ethical problem solving; evidence-based assessment and intervention practices; access to supervision that facilitates reflective, scientifically-based practice and to other resources supportive of this goal; access to diverse clients; research activities; and to a training plan that combines experiential learning with other modes of education. Specific training objectives include assisting interns to: (a) apply ethical decision making to complex clinical and research activities; (b) deepen their understanding of the role of psychology as a science and a practice in many professional settings; (c) refine their commitment to life-long scholarship and contributions to the science and practice of psychology; and (d) develop competencies to evaluate the efficacy of work with diverse clients and systems.

Program Description

NMHC-PIP offers an internship program that is designed to offer a structured experience covering not only a wide variety of psychological services across diverse populations, but also the business and administrative knowledge necessary for today's practitioners via dynamic and service oriented agencies. NMHC has grown to be one of Nebraska's largest providers of mental health services with three offices covering eastern and southeastern Nebraska. The central office is a 5,400 square foot facility in Lincoln, offering coordinated care with an adjoining family medicine clinic. NMHC's philosophy has led to the steady growth. NMHC has experienced and is fueled by work ethic and top quality services provided by its employees. It is with much enthusiasm that NMHC offers an internship to new psychologists providing them with the same knowledge, acumen, and personal characteristics that have led NMHC to become one of the premier psychological service providers of the Midwest. Web Site: www.nmhc-clinics.com.

Program Description

Our training program espouses the local clinical scientist model and prepares interns for clinical practice in community mental health settings. Interns will have the opportunity to develop expertise in providing treatment to children and adults with severe emotional disturbances, and families challenged by complex, multi-systemic issues. Interns serve on multi-disciplinary teams that offer a broad range of mental health services and emphasize inter-agency collaboration. We are interested in ensuring that interns develop competency in the basic clinical activities required of psychologists and preparing them for the multiple roles required of future psychologists. The training program is housed at Riverbend Community Mental Health, Inc. Intern positions involve year-long primary and secondary placements. The sites include the Children's Intervention program (ChIP) and our Franklin office in a rural community approximately 30 miles away. The ChIP rotations focus on intervention with children and families with severe emotional disturbances and include training in school-based mental health clinics. Three different foci are offered: Young Children and ASDs, Trauma and Assessment, and DBT. Our Franklin site epitomizes our commitment to accessible services for underserved populations. The Child and Adult teams at the site are secondary rotations for interns. Our affiliation with Concord Hospital includes intern placements in integrated primary care settings at the hospital clinic and rural satellite office. Interns participate in a weekly seminar training series addressing the assessment and intervention of individuals, families, and systems with a particular focus on their application to our community settings. The seminars emphasize the ethical and professional development of interns by encouraging self-reflectivity. Supervision involves videotape review of sessions including faculty case presentations.

Program Description

The Counseling Center offers a comprehensive training experience for interns working toward doctoral degrees in counseling or clinical psychology. The internship program provides supervision in individual and group therapy, crisis intervention, outreach and consultation, supervision, learning disabilities assessment, administration, and program development. Members of the professional staff represent various theoretical orientations and provide numerous opportunities for supervision. Interns receive a minimum of two and one half hours of individual supervision and two hours of group supervision weekly as well as participate in specialized training seminars, which complement the intern's clinical experience. Interns are highly valued members of the professional staff and are expected to participate in the business and staff development activities of the Center. Our program is based on a practitioner-scholar model and apprenticeship process of intern training in which staff and interns work collaboratively. While each staff person maintains their own theoretical orientation, all staff value and acknowledge the importance of relationship in all aspects of their work. The supervisor/mentor serves to facilitate the learning of clinical and therapeutic skills, and advancement in psychology as a profession. During the first few weeks of internship, interns and supervisors share tasks such as intake and emergency coverage, with interns assuming more responsibility and autonomy as they are ready. Other shared activities may also include co-therapy and co-facilitating seminars and workshops. Although the internship program is relatively structured, there is enough flexibility to individualize training activities to meet interns' specific needs and interests.

Program Description

Lakeview Neurorehabilitation Center offers clinical training in neuropsychology and neurorehabilitation. Training experiences will occur at Lakeview Neurorehabilitation Center's 127-bed residential treatment campus and group homes. Lakeview offers a comprehensive range of services to adults, children and adolescents with acquired brain injury or developmental disabilities. Each intern will complete a 6-month rotation in the Adult and in the Youth program. While the intern can collaborate with the training committee to select from a range of experiences to suit their training and career goals, interns will be encouraged to participate in both assessment and behaviorally-based treatment services. Assessment services include clinical interviewing, risk assessment, behavioral analysis, disability determination, achievement testing and comprehensive neuro-cognitive examinations. Opportunities for participating in outpatient neuropsychological assessment are also available. Intervention services include stress management, anger management, social skills training, substance abuse treatment and sex education. Intervention modalities include individual, group, family training, staff consultation as well as interdisciplinary collaboration. Given that many of our clients have neurobehavioral disorders, the intern will have the opportunity to participate in the development and review of behavioral interventions. Research opportunities can also be arranged for the interested intern. Lakeview's mission is to facilitate the full realization of human potential for individuals affected by neurological and behavioral challenges through the provision of clinically sound goal-oriented treatment in a safe and caring environment. Note that Lakeview did not participate in the match in 2009 and 2010, thus the lack of program data (below) for those time frames.

Program Description

The APH Psychology Department is the largest in a state system that includes over 20 mental health, developmental, and correctional facilities. The Department offers a one-year, full-time (1750 hours) APA accredited predoctoral internship in clinical psychology. The time frame and number of hours designated for the internship are consistent with the licensing requirements of the State of New Jersey. There are currently three full-time internship positions, each with the official designation of Psychological Intern. As a department, we are supportive of clinicians from varied backgrounds and theoretical orientations, and our interns come into contact with varying points of view and methodologies. Our training philosophy is that the most effective preparation for the practice of professional psychology requires a progressive integration of clinical experience, supervision, and didactic training. This is formalized in an Integrative-Developmental-Practitioner Model that blends experiential and didactic learning through mentorship and supervision.

Program Description

The YCS Institute offers three internship tracks: Institute, Child/Adolescent, and Therapeutic Nursery. Attachment/object relations/ developmental and/or family systems orientations are utilized in assessment and treatment. In the Institute track interns provide individual play therapy, individual adult therapy, family therapy, dyadic (parent-child) psychotherapy, and group therapy in our outpatient clinic with primarily urban, African American and Latino children and families. In the child/adolescent track the interns have the opportunity to focus on older children and adults in an outpatient setting. In the Therapeutic Nursery Track interns carry 8 cases in a partial day setting as an integral member of the treatment team. Interns spend a part of each day in the classroom participating in the therapeutic milieu. Cases are seen for individual therapy and for PCIT. Interns in all tracks participate in our parent-infant services program running parent-child groups and seeing dyads. All interns will participate in mandatory rotations with older children / adolescents who are in our outpatient clinic. Running groups in our therapeutic nurseries or residential programs are optional rotations. Therefore, treatment cases span the ages from birth to adulthood. Similarly, assessment experiences may include work with individuals from birth to 21 years. Assessment batteries include measures of cognition, achievement, and personality functioning (Rorschach training is expected); infant assessment will be acquired. Individual and group supervisions are provided. Interns also participate in weekly didactic seminars and weekly case conferences. Opportunities for consultation projects with senior staff are available.

Program Description

Trinitas provides an in depth, broad-based, training in the delivery of all facets of psychological services across the life span. Interns work in one of the largest behavioral health services in the state. We use the local clinical scientist model to guide our training. We provide services to an extremely ethnically diverse, urban population. Applicants are asked to state a preferred emphasis, child or adult, but all interns work with both adults & children. Interns gain experience in providing adult, child, family, & group psychotherapy & assessment. Settings include outpatient, partial hospital, inpatient, residential and school environments. Our program offers the unique opportunity for all interns to be trained in the use of DBT. Our program also offers a unique opportunity to deliver services as a consultant providing training, program development & consultation to corporations & schools. Interns work in our child and adult outpatient clinics during the entire year. Interns additionally choose two 6-month rotations. Rotation choices include Child/Adolescent inpatient, Adult Partial Hospital, Child Partial Hospital, Therapeutic High School, Psychology Consultation to Schools and Corporations and Residential Adolescent Program. Interns perform 8 psychological testing batteries during the year. Interns also participate in an evidence-based outcome project. Intern seminars include: adult psychotherapy, child, family & ethics, DBT, Group Therapy, Testing & Assessment and an intern process group. Interns receive four supervision sessions / week (3 individual & 1 group). Supervision is provided for outpatient psychotherapy cases, rotation and psychological testing (group supervision). Each intern carries 10 to 12 outpatient cases (approximately half in adult & half child/adolescent) plus 2 outpatient groups. Our training environment is highly supportive and flexible. The hospital has a long tradition of hiring former interns and we have a number of former interns on staff who function in a variety of roles in the department. Training supervisors work from a variety of theoretical orientations, including psychodynamic, CBT, DBT, systems, and interpersonal approaches.

Program Description

Interns will have the opportunity to obtain broad knowledge and experience in the neuropsychological evaluation, diagnosis, and treatment of a wide range of neurodevelopmental (and acquired) conditions to include Autism Spectrum Disorders, Learning Disabilities, AD/HD, various Neurodevelopmental Disorders, Epilepsy/Seizure Disorders, Concussion, and Traumatic Brain Injury, primarily. (An adult training emphasis may also be available for working with adults who have acquired brain injury. This opportunity will provide a very rich experience for students interested in brain injury rehabilitation primarily, offering training experience in residential rehabilitation, and outpatient therapies.) CNNH provides comprehensive and multidisciplinary evidence-based evaluation and treatment services and access to clinical research for children, adolescents, and adults and their families with neurological disorders, neurodevelopmental disabilities and neurobehavioral disorders. CNNH has at its core neurological, neuropsychological, and developmental-psychological diagnostic and treatment services. Integrated with these core services are an array of assessment and therapeutic modalities and programs, including Neuropsychiatry, Applied Behavior Analysis, Cognitive Behavioral Therapy, Peer-mediated Social Development Therapies, Social Skills Groups, Neurologic Music Therapy, and Creative Arts in Therapy and other modalities. The Center is staffed with experienced and highly trained clinicians including Pediatric Neurologists, Neuropsychologists who serve as the Internship Training Director and Supervisors, Advanced Practice Nurses in Neurology and Psychiatry, Board Certified Behavior Analysts, Social Workers, Special Educators, Family Therapists, and ancillary staff in employment or consultative capacities.

Program Description

The VA New Jersey Health Care System is comprised of two medical centers 20 miles apart (East Orange & Lyons), plus several outpatient clinics. Our population is diverse with respect to ethnicity, gender, and socioeconomic status. Comprehensive mental health services are provided to veterans in areas such as acute psychiatry, outpatient mental health, long-term psychiatric rehabilitation, geropsychology, substance abuse, post-traumatic stress disorders, and health psychology. Training rotations are typically six months in duration with opportunities for major and minor clinical assignments. Concentration in areas of clinical interest may be possible. We employ a practitioner-scholar model. Our training program exposes interns to the scientific principles of practice through readings and seminar discussions. Supervisors offer diverse perspectives, including psychodynamic, CBT, integrative, & evidence based. Program goals include developing competence in psychological intervention (individual & group therapy), assessment (objective & projective techniques), plus professional standards and ethics. Rotations and clinical activities are determined by interns' level of training and skill, with a progressive increase in complexity of cases and level of autonomy as competence is demonstrated. Psychological assessment is emphasized in the program. Instruction is offered in the use of objective and projective measures. Our goal is to have interns write comprehensive integrated psychological reports upon the completion of the internship program. Experience with assessment measures is highly desirable but not essential as remedial training is offered. In support of the program's clinical and academic goals, we offer a series of well-developed seminars. Ongoing training is offered in psychotherapy (group & individual), assessment, multicultural issues, ethics, and professional issues. Please review our brochure for specific details of rotations and seminars.

Program Description

GPPH offers an APA-accredited full-time, year-long internship in a state-of-the-art 500-bed state psychiatric hospital for adults. Patients vary widely in their diagnoses and symptom severity, offering training experiences across the continuum of psychopathology. GPPH celebrates rich cultural diversity among both staff and patients, adding to the depth of the training experience. In fact, the Psychology Department chairs the hospital's Diversity Task Force which aims to celebrate diversity in all forms, and create a welcoming environment for both patients and staff. Faculty believe that learning takes place best in an environment that provides support and encouragement, and interns are never viewed or treated as auxiliary staff. Following the Local Clinical Scientist model, training focus is on individual and group psychotherapy and psychodiagnostic testing, with an emphasis on the education of the intern to meet his/her individualized training goals. Supervision and training in dynamic, CBT, integrative, DBT, schema therapy, and trauma-informed care perspectives are provided. The training year is structured into three 4-month clinical rotations with the following populations: admissions, forensic, extended care/treatment refractory, geriatric, and discharge resistant. We also have the only state-funded unit for the treatment of deaf mentally ill patients in New Jersey. In addition, interns will gain experience in conducting individual and group CBT for treatment of psychosis. Interns are exposed to a multidisciplinary team approach and actively encouraged to integrate theory into practice, with particular focus on evidence-based interventions. Along with the APPI online and three letters of recommendation, please upload a sample testing report and to the APPI online supplemental materials section.

Program Description

Multicultural and diversity issues are integrated into each competency area in a *flaminated* approach and each internship position involves significant outreach to the international student community. Interns are also encouraged to identify their own training goals and interests. There are five full-time doctoral registered psychologist faculty at the UCC. Two part-time doctoral-level registered psychologists are also involved in the training programme. The UCC faculty draw on a broad variety of orientations, including integrationist, feminist, interpersonal psychodynamic, and solution-focused. Optional minor rotations may be available at the Eastern Regional Health Authority during the second half of the residency, as well as the Discipline of Family Medicine, Memorial University.

Program Description

The program trains psychologists to meet the mental health needs of individuals and families, primarily of color, from stressed and urban backgrounds. It prepares students to deliver direct services, and for leadership roles directing the delivery of services and providing training to others. There are three major tracks, adult, forensic (prison-based), and child. Goals for students are development of competence in: 1) diagnosis, assessment, and psychotherapy; 2) work with diverse individuals; 3) work with multiple systems; 4) outcome assessment/program development; 5) multi-disciplinary collaboration; 6) conveying psychological knowledge to others; 7) ethical practice and professionalism and an understanding of the impact of legal, governmental, and funding systems on psychological practice; 8) ongoing professional self-development and self-assessment. There is a dual emphasis. First, students are expected to achieve core competencies in the delivery of direct psychological services to individuals with a wide range of presenting problems within the particular developmental track. Second, students are provided with opportunities to develop particular interests and specializations. All competencies are informed by an evidence-base. The model of training used is based on the following principles:-Core requirements reflect core competencies, with a focus on the underserved-An individualized program to fit a student's needs and interests-Plentiful and diversified supervision-Strong didactic component-Integration of interns within a professional community that respects their work, fosters clinical and research skills, and enhances personal development-Diverse competencies equip interns for pre-licensure readiness and marketplace flexibility-Utilization of program development and outcome measurement skills to design and implement system-level interventions that improve the quality of services.

Program Description

The ethnic diversity of the city provides a rich educational experience from the pre-kindergarten to secondary school age setting. Interns are required to spend at least 25% of their time each week in face to face psychological services to students. Supervision is conducted in both group and individual settings. Interns are expected to be available every morning at 7:15 am for supervision. The Interns are based in the schools, which affords easier access to students, parents, teachers and administrators. Each intern will be assigned to an elementary school three days a week. The interns will also complete 12-week rotations through a High School, a behavioral disabilities program, and an autism program. Other placements are arranged according to the intern's interest. Didactics are two hours per week and interns are expected to present at least one topic bimonthly. Seminars are open to the 60 psychologists on staff and/or other Child Study Team members if appropriate. Trainings have included functional behavior assessments, cognitive behavior therapy, testing administration, report writing, etc. The Newark Public Schools Internship program emphasizes evidence based practice and provides training to meet the goal of assessing strengths and weaknesses of a developing child. Based on the assessments conducted, interventions are developed and put in place to help the child reach his/her academic and social potential. Training is provided on psychological assessment with a large variety of instruments, functional behavior assessments, and interviewing techniques. Interventions that will be developed include consultation with student, teacher, school staff and/or parent, a variety of counseling skills, behavior plans, etc. Developing skills in monitoring student progress and developing individual educational plans are also emphasized. Interns are required to adhere to appropriate APA ethics.

Program Description

Rutgers University Behavioral HealthCare (UBHC) provides the funding for the internship. UBHC, in conjunction with University Correctional HealthCare and Robert Wood Johnson Medical School - Department of Psychiatry, all affiliates of Rutgers Biomedical & Health Sciences jointly provide the facilities and faculty for a comprehensive pre-doctoral internship program in clinical psychology. UBHC Clinical services are available across the life span and across levels of care. 2 major year-long adult tracks are offered: Latino Outpatient Mental Health & Severe Mental Illness. 3 major year long child/adolescent tracks are offered: Child Partial Day Program; School-based services; Jamesburg adolescent correctional facility. These are our 5 major tracks, all of which provide consonant training experience focusing on therapy, assessment and consultation within a multi-disciplinary setting. All interns also choose 1 full day minor rotation within other areas of UBHC. We espouse a Practitioner-scholar model. We provide one day per week of didactic training. Our internship is strongly committed to diversity; it is an essential component of our training program. We are likewise committed to attracting diverse applicants and maintaining diversity within our intern cohorts. We are accredited by the Commission on Accreditation of the American Psychological Association. Our program's last site visit was in December 2010. Our next scheduled site visit is in 2017. Questions related to the program's accredited status should be directed to: The Commission on Accreditation Office of Program Consultation and Accreditation American Psychological Association 750 First Street, NE Washington, DC 20002 Phone: 202-336-5979 E-mail: apaaccred@apa.org Web: www.apa.org/ed/accreditation For more information about our internship, please go to our website: www2.ubhc.rutgers.edu/psynweb/.

Program Description

PHBH provides partial hospital, intensive outpatient and inpatient treatment for a large range of behavioral health conditions. Group is the primary treatment modality, although individual therapy experience is also offered. Interns receive 4 hours of supervision and 2 hours of didactic training weekly. Faculty have diverse interests, theoretical orientations and areas of expertise. Our program adheres to a practitioner-scholar model, and emphasizes refining critical thinking skills and continuing to engage in scholarly inquiry. We also emphasize an individualized, personal and collaborative approach to training. **DISTINCTIVE FEATURES:** All interns receive experience with women's issues through the Women's Program or the Eating Disorder Program. All interns receive significant training in Motivational Interviewing through weekly group supervision with the Training Director. Interns in the Women's Program receive significant training in DBT. All interns attend the Evidence-Based Practices Journal Club, which focuses on issues and controversies surrounding EBPs. **ROTATION ASSIGNMENTS:** Interns experience one required and one optional clinical rotation, each of which covers 5 days/week, and is a six-month commitment. The required rotation is at our Mount Lucas outpatient office, which has offers a variety of adult programs (psychiatric, substance abuse, dual diagnosis, older adults). The optional rotation is at the Eating Disorders Program or the Women's Program, each of which can accept two interns over the course of the year. Applicants must apply through the APPI online system to one or both of the optional rotations. **OTHER REQUIREMENTS:** 5-10 assessment batteries. Clinical program/curriculum development project, determined collaboratively with the Training Director. Research project, determined collaboratively with the Training Director.

Program Description

The Psychology Dept of TPH, in conjunction with the NJ Division of Mental Health and Addiction Services and affiliated outpt and specialized training sites offers a one year, full-time (1750 hours), APA-accredited internship in Clinical Psychology. Interns' core experience involves intensively supervised clinical work at TPH with an inpatient adult population. TPH patients display a broad spectrum of psychopathology, and are from diverse cultural, ethnic, and economic backgrounds. Interns are exposed to a range of theoretical orientations. They gain experience with varied treatment modalities, and acquire assessment experience utilizing a range of assessment tools. Individualized competency based training plans are developed for each intern, facilitating the development and expansion of a broad base of clinical skills. Goals of the internship are to graduate interns who will: 1. Function as competent psychotherapists, psycho-diagnosticians and interdisciplinary treatment team members. 2. Effectively apply literature, supervision and continuing education to their clinical work. 3. Conduct themselves in a professional manner, in accordance with ethical and legal matters applicable to the setting in which they practice. 4. Possess sensitivities to individual and cultural differences that enable them to provide effective psychological treatment for the individuals they serve. TPH's psychology department is comprised of 17 psychologists, 4 psychology interns, and 5 Behavior Support Technicians. 8 full-time psychologists are licensed in New Jersey. The hospital is divided into 4 complexes. Each complex has unique functions, but is interdependent with the other parts of the hospital. During the course of the year long internship, each intern spends 6 months in 2 rotations each in different sections of the hospital. Depth and variety of experience are further promoted by having our interns spending 1 day per week at affiliated outpatient or specialized training sites.

Program Description

Residents, possessing a wide variety of disabilities receive total care and treatment covering their medical, developmental, mental health, and behavioral needs. Some of these residents are dually-diagnosed with a broad range of mild to severe psychiatric disorders represented. The Psychology Department of WDC consists of 10 full-time doctoral level Psychologists, four of whom are licensed New Jersey Psychologists. All Psychologists provide supervision of additional departmental staff who offer specialized services and program support to the residents. The theoretical orientation of the Psychologists is varied. It is the principles and application of Learning Theory, however, which provide the framework for supervision and the treatment of individuals. Interns will learn to critically evaluate and synthesize information from various domains of cognitive, emotional, and social functioning in order to provide more effective psychological services. They will evaluate the various functions of an individual's behavior and make recommendations to the IDT. Training at WDC will also emphasize the development of a broad range of diagnostic and clinical skills. Interns will be expected to demonstrate competency in psychotherapy, crisis intervention, multidisciplinary team functioning, completing a comprehensive behavior assessment, and psychological testing using multiple assessment techniques. As part of a concurrent training experience, interns spend one full day per week at one of WDC's affiliated off-site facilities. There, they will gain exposure to, and provide therapeutic and diagnostic services to a more varied and typically higher functioning patient population. Interns will also have numerous didactic and experiential opportunities for learning. These include WDC presentations, workshops on treating individuals with Developmental Disabilities, and the New Jersey Department of Human Services Colloquium Series.

State desired track(s) clearly in letter. Peds Neuropsych Track applicants must show preparation in this area.

Program Description

The clinical psychology internship at the University of New Mexico Health Sciences Center has 3 tracks with emphasis in: Clinical Child; Pediatric Neuropsychology; and Early Childhood. All tracks share a training philosophy that is multicultural, developmental, contextual and interdisciplinary. Treatment settings are inpatient, outpatient, and community. We serve a highly diverse population of children, adolescents, and families in the public sector, many with a history of trauma. The program has adopted a model of Evidence Based Practice in which contextual factors are keenly considered, and the therapist is culturally responsive. This model assumes that culture, regardless of ethnicity, is a central aspect that must be considered in all types of psychological intervention. In addressing cultural responsiveness, the program emphasizes both process and outcome and focuses as much on the provider as it does on the client. Specific knowledge and skills are not seen as sufficient to training culturally and developmentally responsive psychologists. Cultural responsiveness is a reflective practice and a lifelong process. To train psychologists in evidence-based practice that will be appropriate for diverse populations, the program fosters an open, collaborative and multidimensional perspective while encouraging the analytic skills required for effective decision-making. In addition to providing training in traditional treatment approaches (e.g. CBT, behavioral, DBT, and psychodynamic) the program promotes contextual models, such as family systems, because these models are conducive to viewing culture as an integral feature to be addressed in clinical practice. The program facilitates interns' examination of how their culture (as experienced in their families and academic environments) has influenced them (who they are, how they see themselves, what they value in others, etc).

Program Description

SCPPI member sites are New Mexico VA Healthcare System, Indian Health Service, and UNM Medical Center. We offer generalist, research-based, culturally-aware training with over 15 possible rotations covering psychological trauma, addictions, health psychology, consultation/triage, SMI, psychosocial rehabilitation, family therapy, assessment, psychotherapy, and neuropsychology. Our mission is to train culturally-aware, research-competent professional psychologists who will be well-prepared to function in clinical, academic, research, or administrative settings. Because of our great diversity in training sites and emphasis on quality supervision, interns graduate with high levels of self-confidence in their abilities to tackle anything in the domain of professional psychology. Our graduates have had great success in obtaining post-doctoral fellowships and employment in competitive clinical, academic, and medical center positions. Training within SCPPI adheres to the Scientist-Practitioner model and most rotations teach Evidence-Based Psychotherapies. While interns are encouraged to identify specialty wishes in light of their career goals, we also work closely with interns to identify gaps in basic Foundational and Functional competencies that will be addressed in the course of the training year. Interns can be given research time as a minor rotation, and have access to Career-Scientist research mentors within the faculty. We think our training model is ideal for those whose career goals include a mix of research, clinical work, and teaching. The unique cultural and geographic setting here in New Mexico offers a foundation for the sophisticated training we have developed in weaving cultural awareness into every aspect of clinical work. New Mexico is a unique and beautiful place with many recreational and cultural resources.

Applicants should use the AAPI on-line to submit AAPI Parts I & II, transcripts, vita, and 3 letters of recommendation. Applicants may be required to have a background check prior to being hired.

Program Description

The primary goal of the training program is the commitment to preparing interns to be "generalist" practitioners in that they are able to provide a variety of treatment modalities including: individual, couples, group, career, intakes, crisis intervention, assessment, supervision, and outreach and consultation in an ethical and professional manner. We also prepare interns to become professionals who are skilled in specialty areas of interest. These specialty areas include: ADHD assessments, administration, animal-human interactions, behavioral health and wellness, career, GLBT, relationship violence and alcohol awareness, research, and providing therapy within a particular clinical specialty area of interest (e.g., eating disorders, crisis intervention, trauma, etc). The educational models underlying the training of interns are the scientist/practitioner & practitioner/scholar models depending on an intern's educational background and professional path. Given that our program is housed in a university that is located in the southwest and close to the Mexican border, there is a strong emphasis on the local cultural diversity as well as other descriptors that contribute to diversity throughout the internship year. Please see website for a full description of the training program.

Program Description

A generalist internship offered in a medical school, private general hospital, state hospital, and VA Medical Center consortium. All consortium sites within walking distance. Eclectic orientation with pronounced psychodynamic underpinnings. Three, four-month rotations. Interns complete both outpatient and inpatient rotations. One elective (e.g., child and adolescent psychiatry, adolescent day treatment, primary health care, Veterans' Trauma Rehabilitation Program).

Applicants with experience in college or university counseling centers are preferred. Experiences with diverse populations, with prevention, early intervention, or teaching, and with psychological testing is advantageous	

Program Description

Accredited by the APA, the internship focuses upon professional development that enables entry-level psychological practice at the generalist level. Our program is designed to (1) prepare psychological practitioners to comport themselves in a professional manner adhering to prevailing ethical and legal standards, (2) to competently develop, deliver, and evaluate broad psychological services that incorporate an understanding of cultural and individual differences and diversity, and (3) to practice in a complex system or organization. The Counseling Center's services, which are intended to support the healthy development and academic engagement of our diverse student body, broadly follow a public health/community mental health model focused upon prevention and community education, early intervention, and psychological treatment and clinical consultation activities. Interns become involved in our broad portfolio of services and programs. Such diversity of experiences compliment the clinical psychological work (i.e., assessment, treatment, consultation) that is a major part of the internship experience. The Center supports two peer service programs and interns become closely involved in training and supervising the undergraduate peer helpers & peer educators and thereby develop critical skills in teaching, supervision, & program coordination. Interns are closely supervised throughout the internship in all aspects of their work. The internship adheres to a practitioner-scholar model grounded in the knowledge and methods of psychological science and fosters intern development through mentor-apprentice relationships. In as much as the Center is a leader in implementing innovative evidence-based prevention and early intervention programs, interns are immersed in a setting in which data inform practice. There is an emphasis within the Center on diverse theoretical perspectives and culturally competent practice.

Program Description

BROCHURE AND INFORMATION AVAILABLE AT: https://www.omh.ny.gov/omhweb/Facilities/nyccc/qcpc/brochures/Internship_2013_brochure.pdf
Focus of training is on in-depth treatment and assessment of children and adolescents with severe psychiatric disorders in both inpatient and day-treatment settings. The training model in practitioner-scholar. Interns will have two 6 month rotations, typically one on an inpatient unit and one in day-treatment. They will receive intensive supervision on their psychotherapy cases as well as on their testing assignments. They will become vital members of the interdisciplinary treatment teams on their units and will gain experience in individual, family, and group therapy as well as consultation, community advocacy, and clinical presentation. Students are highly respected in our institution and are encouraged to use the internship experience to develop their own professional identity, making use of the variety of approaches used by the faculty and other hospital staff.

Program Description

Based in an academic medical center, our psychology training program emphasizes learning about the nature of psychopathology using diagnosis, case conceptualization and formulation, and a variety of treatment approaches. A scientific approach to the study of psychopathology requires an in-depth understanding of evidence-based treatments - as well as the controversies surrounding them. By the end of their training, interns will have a strong command of the expanding knowledge base in psychopathology, including the complex interrelationship between biological, psychological, and social factors, and the impact they have on thoughts, emotions, and behaviors.

We offer 3 specialized training programs: an adult track, a child and adolescent track, and a "new" combined (child, adolescent, and adult) track. While each of the specializations has its own goals and objectives (see website for details), they all share the same overarching philosophy: that the internship should provide interns with a broad set of high quality clinical experiences that are sequential, cumulative, of graded complexity, and customized to fit the individual goals of each intern. As such, our program offers a number of elective rotations and makes every reasonable effort to tailor training to the needs and interests of the individual intern. This individualized training program is discussed and finalized prior to the internship start date. We also place great emphasis on supervision, providing at least 5-7 supervision hours per week, using a variety of different theoretical orientations, including: psychodynamic, cognitive behavioral, dialectical behavioral, family/systems, schema-focused, and lifespan developmental approaches. In addition, intern seminars and departmental Grand Rounds run throughout the year, and account for at least 5 hours per week of the interns' time.

Other Application Requirements
 Indicate in your cover letter to which site/sites you are applying. Include an integrated testing report (Wechsler and Rorschach/Exner required). Spanish speakers and minorities are strongly encouraged to apply.

Program Description

The comprehensive psychiatry services and large faculty at each site bring a wide range of specialized training and theoretical orientations to the training program. The programs at each site are essentially same, with shared philosophy of training and similar training experiences, serving a culturally diverse population. Interns are interviewed and selected for a specific site which serves as their home base throughout the training year. There are cross-site seminars and interns may elect specific cross-site rotations and training activities. While there are some differences in certain electives, a core emphasis at both sites is the inpatient psychiatry experience where interns provide individual, group and family therapy for inpatients on their unit and participate as full members of the multidisciplinary team. Each site has PER and adult outpatient training opportunities as well as unique specialty areas: a bilingual/bicultural inpatient unit, a longer term inpatient unit for stabilized patients, geriatric outpatient services, pediatric neurodevelopmental assessment services, pediatric mental health services, adult/pediatric consultation/liaison services, Family Advocacy Program for newly identified abused children, adult and pediatric HIV services, medical rehabilitation services and comprehensive substance abuse services including inpatient detox (JMC); and a partial hospital program and a geriatric inpatient unit (NCBH). Interns are required to complete two 4 month inpatient rotations and one 3-4 month elective rotation. At JMC, the second inpatient rotation may be exchanged for the long term unit, rehab medicine or substance abuse. At NCBH, interns do 1 month in the PER. All interns are placed on a year long outpatient site. Testing is a major component of the training so experience with Rorschach/Exner scoring is required. Weekly, interns receive at least 4-5 hours of group and individual supervision.

Program Description

The population we serve is poor; very diverse racially, ethnically, culturally, and linguistically; and includes individuals throughout the lifespan. Presenting problems include chronic and acute medical conditions; medical and psychiatric emergencies; child and adult psychiatric disorders, physical and sexual abuse, substance abuse and dependence. These problems are addressed in a multidisciplinary setting in which interns provide psychological testing and assessment; group, family, and individual interventions; consult and coordinate care with the hospital staff and with law enforcement, child protective services, criminal justice agencies, and social service agencies. Interns work with Attending Physicians (Psychiatrists, Pediatricians, and Specialists), Social Workers, Residents, and other health care professionals. Interns select 4 of 6 rotations which run concurrently from September through August. Separate supervision is provided for each rotation including Longterm Psychotherapy Supervision.

Program Description

Kingsbrook has 40 general acute rehabilitation beds and 25 TBI beds accredited by CARF and JCAHO. Intern responsibilities primarily involve evaluation and treatment of inpatient and outpatient adults with brain injuries with some services to general rehabilitation patients. Inpatients: Interns evaluate the cognitive, behavioral and emotional status of each inpatient upon admission using a mental status examination, a clinical interview and Neuropsychological tests as appropriate. Coma patients are also evaluated using a coma scale. For those patients with behavioral problems, such as agitation or threatening behavior, behavioral plans are completed for implementation by the rehabilitation staff. Patient status is reported at weekly team rounds. Outpatients: Following review of medical/psychosocial records and clinical interview, neuropsychological and/or psychological evaluations are performed on adult outpatients with established or suspected brain injuries or learning disabilities. Often, complete neuropsychological evaluations including report are conducted assessing intelligence, cognition, and academic achievement. Personality assessments are also conducted when indicated. Outpatient cognitive and psychological treatment is provided to selected patients. Research: Research is encouraged and supported. Research proposals are developed collaboratively. Submission for poster presentations at state/national conferences is encouraged. Time for research is usually available to interns depending upon clinical demands. Supervision/Training: Interns receive a minimum of 2 hours of individual supervision (1 from the training director and 1 from the staff neuropsychologist). Two hours/week of didactic seminars are provided. Supervisors are available formally and informally on an as needed basis. Interns can also attend lectures/seminars offered to rehabilitation medical residents.

Program Description

Two Track Program: 1) Adult Track Contact: Jean Kaluk, Ph.D. 2) Child and Adolescent Track Contact: Rena Samin, Ph.D. The KCHC internship is APA Accredited and serves an inner-city, largely minority and recent immigrant population. Psychiatric inpatient and outpatient work is required for both the Adult and Child and Adolescent Tracks. The placements/rotations include long-term and brief individual and group psychotherapy and diagnostic testing and interviewing. Elective placement/rotation choices include: Adult Track: Forensic Evaluation Service, Neuropsychology, Partial Hospitalization Program, Pediatric Consultation-Liaison, Comprehensive Psychiatric Emergency Program, Women's Health Initiative, Behavior Support Team, Child and Adolescent inpatient and outpatient Child & Adolescent Track: Developmental Evaluation Clinic, Pediatric Consultation-Liaison, Infant and Child Learning Center, Intensive Crisis Stabilization and Treatment Program, and Pediatric Psychiatric Emergency Room. Other rotations may be arranged to meet training needs when the services and supervisors are available. Interns may select a cross-track elective with Training Directors' approval. Required didactic seminars include psychotherapeutic modalities, work with specialized populations, weekly case conferences, psychological and neuropsychological assessment, and cross-cultural treatment issues. Interns are invited to attend all staff Continuing Education and Psychiatry Grand Rounds presentations. Adult Track interns receive 1 hour of weekly individual supervision for every 2 outpatient cases and for each group psychotherapy case. Child Track interns receive 1 hour of weekly individual supervision for every outpatient and group psychotherapy case. One hour of weekly individual supervision is provided for each rotation/ placement. Ind supervision is provided for each psychodiagnostic testing case. Additional individual and/or group supervision is provided as needed.

Program Description

Maimonides is located in an ethnically diverse, multicultural neighborhood in Brooklyn, with unique opportunities for broad experiences in the field. Interns will participate in three rotations including inpatient, outpatient (adult and child), as well as a continuing day treatment experience. Interns will have an opportunity to work with a variety of outpatients both in the Mental Health Center as well as in the Medical Center. This includes crisis intervention work in our psychiatric walk-in clinic as well as initial interviewing. Rotations in health psychology and developmental disabilities are included in the outpatient rotation. Interns are expected to be competent enough in assessment techniques to perform diagnostic evaluations in all settings, both comprehensive as well as brief batteries. We therefore require testing experience. The opportunity to work with culturally and ethnically diverse populations in this melting pot neighborhood is one of the most unique features of the Maimonides Internship. As the aim of our program is to produce a solidly trained beginning psychologist, we identify ourselves as following the Practitioner-Scholar model. Our staff's theoretical orientations include behavioral, cognitive-behavioral, psychodynamic, and psychoanalytic and offer the interns a range of perspectives and treatment techniques. Supervision includes up to three to four hours of individual and one to two hours of group supervision a week. In addition, the opportunity for research exists following a human subjects review committee decision. Finally, didactic seminars are offered in a variety of areas to continue the process of instructive learning. It is our intention to take the broad base of learned material and assist the intern in the practical application of the theoretical techniques they have studied over the years in school. To apply please include a case summary and a psychological testing in addition to 3 letters of recommendation with your application.

Program Description

Our training program utilizes a Scholar-Practitioner Model. It focuses on the development of excellent clinical skills, in light of current science, that prepare interns to function successfully in treating patients with psychological problems in both mental health and medical settings, and in a competitive healthcare marketplace. The program is designed to train interns as generalists through immersion in clinical work and careful supervision. Interns undertake two half-year rotations divided into two separate training assignments for each rotation. The program provides intensive experience and supervision in outpatient and medical inpatient settings including individual and group therapy, psychological assessment, treating populations in substance abuse, post-traumatic stress, primary care, geriatrics, hepatitis C and pain. An evaluation of each person's background is considered in making training assignments with a view toward developing and broadening the intern's skills. All rotations will include outpatient service delivery, and also may include work in acute primary care, oncology, PTSD program, geriatrics, and/or neuropsychological assessment, Hep C/Pain and substance abuse programs. Each intern also receives training and gains experience in providing group and couples therapy throughout the duration of their internship. All interns are exposed to and administer a variety of psychological and (optionally) neuropsychological assessment measures throughout the year. It is the philosophy of the program that in-depth concentration in selected clinical areas is preferable to many superficial experiences. Although there is a strong didactic component to the internship, the heart of the program lies in its commitment to experiential learning. This is partially reflected in the year long process group in which all interns are required to participate.

Program Description

The Clinical Psychology Program at Woodhull Medical Center is under the auspices of the Department of Psychiatry. The program provides a generalist training within a clinical model to meet the mental health needs of underserved populations in an ethnically diverse city environment. All interns are required to participate in a year-long core rotation in the Adult and Child and Adolescent Departments and 4 months with Inpatient Services. Interns are also required to develop an area of interest by selecting from minor rotations. They can select between: HIV Center, Chemical Dependency Treatment Services, Mobile Crisis Team, Bilingual Community Outreach (Spanish/English)Service, DBT, ACT,ER, Consultation/Liaison and Group Psychotherapy. Interns will participate in a didactic seminar series and are required to attend min of 5 Grand Rounds. Interns will develop competence in a) working with a wide range of presenting problems; b) diagnostic, assessment and psychotherapy, c) adult and child group psychotherapy; d) multi-disciplinary collaboration; e) consulting to schools; f) conveying psychological knowledge to others e)providing therapy within a bilingual English/Spanish/bicultural framework if applicable. We offer significant supervision in all minor and core rotations. Training supervisors work from a variety of theoretical orientations, including Psychodynamic, CBT, Family Systems, Multicultural and Interpersonal Perspectives and offer interns supportive supervision and look to enhance professional development. Please refer to our brochure at www.nyspa.org for more information.

Program Description

Our diverse staff consists of counseling and clinical psychologists, social workers, and psychiatrists. We offer a full range of training and professional experiences typically found within a large university counseling center with a diverse client population. Interns can expect to provide individual, couples, and group psychotherapy (both short-term and longer-term), crisis intervention, outreach and consultation to the university community, and receive supervision and training for all these activities. They will also provide training and supervision to our practicum students, and receive supervision of supervision. Our interns also participate in center committees and have input into center policies and procedures. Attention to diversity, in its various forms, is woven through all we do here, clinically, professionally, and personally. Center staff are committed to ongoing development of clinical and outreach services for traditionally underserved populations, as well as supporting each other in continued professional/personal growth in terms of cultural sensitivity and culturally competent practice. UB also has a large international student population. The percentage of international students seen at Counseling Services is often comparable to or exceeds the percentage represented on campus. Our center has a commitment to further developing, improving, and expanding a variety of services to International Student populations. We have a range of trainees (beginning practicum, advanced practicum, externs, social work interns) in addition to the pre-doctoral psychology internship. Our staff is committed to providing quality training and supervision experiences for all our trainees. We work to promote a developmental model of training, with a primary goal for psychology interns being to "assist them in the transition from "trainee" to "professional," with increased confidence and capacity for autonomous functioning.

Program Description

The VAWNYHS is a regional health care system, including tertiary care facilities, outpatient clinics, community based outpatient clinics and diverse mental health programs, serving veterans from Upstate New York, adjacent states and Canada. Our internship is APA accredited and identifies with a scholar-practitioner model, including strong emphasis on a scholarly knowledge base, diverse clinical skills for professional practice, and support for scientific activity, through a mentorship style of supervision that prioritizes intern developmental growth via diverse, intensive clinical activities. We currently have 5 predoctoral internship positions. The internship year generally comprises four half-time 6-month rotations, with option to do full-time 6-month rotations, e.g., for specialty track interns. Interns are recruited within a Geropsychology specialty track (1 intern), a Neuropsychology specialty track (1 intern) or our General track (3 interns) and may apply to multiple tracks. Regardless of track, interns may select from ANY of the training rotations below: Behavioral Health Clinic Inpatient Psychiatry / OEF-OIF Program Psychosocial Rehab & Recovery Center PTSD Program Substance Abuse Treatment Services Marital and Family Therapy Primary Care Primary Care based Pain Management Home Based Primary Care Community Living Center Behavioral Medicine Center for Integrated Healthcare (research) Geropsychology Neuropsychology VA Western NY Healthcare System internship graduates have gone on to a wide range of post-doctoral fellowships, academic positions, clinical positions and leadership roles, many within the Veterans Health Administration.

Program Description

The Canandaigua VA Medical Center consists of 14 patient care buildings situated on 150 acres. Located just outside Rochester, NY in the beautiful Finger Lakes region. At present, the CAN VAMC consists of Community Living Centers contain roughly 200 beds, while the Domiciliary programs (PRRTP, DCHV, and Domiciliary) have approximately 80 beds. Notable services offered today at Canandaigua VA include Long-term Care, Nursing Home Care, Hospice/Palliative Care, Mental Health Care, Alcohol/Drug Rehabilitation, the Post-Traumatic Stress Disorder Clinic, the Domiciliary Program, Home-Based Primary Care, the Mental Health Initiative Program and the Homeless Program. In 1997, the Rochester Outpatient Clinic became affiliated with the Canandaigua VA Medical Center as part of a general reorganization occurring throughout the VA. ROPC is a large outpatient facility, offering a full array of outpatient medical, behavioral health, psychiatric and specialty care services. Center of Excellence at Canandaigua (CoE) The Department of Veterans Affairs established the Center of Excellence at Canandaigua VAMC in August, 2007 as a prevention and research center with the primary goal of reducing the morbidity and mortality in the Veteran population associated with suicide. To this end, the Center's mission is to develop and study Veteran-focused, evidenced-based, public health approaches to suicide prevention. The CoE at Canandaigua seeks to meet this mission through serving as a national, regional and local resource on suicide research and prevention and mental health through two key Cores: the Epidemiology and Interventions Research Core and the Education, Training and Dissemination Core. The CoE also supports implementation research on several of VA's National Initiatives, including VA's National Suicide Crisis Line and the Suicide Prevention Coordinator Program. Taken together, the CoE's activities constitute a public health approach to suicide prevention.

Program Description

This is an adult internship with options to rotate through child and adolescent services. Interns are assigned four 3 month rotations based on their training goals and objectives for their internship year. Rotations include adult inpatient, child inpatient, adolescent inpatient, women's forensic, consultation-liaison, and psychiatric emergency room. Psychological testing is a significant part of our program, including objective, personality, neuropsychological and projective measures. Throughout the year, interns are additionally assigned outpatient individual (adults, children and adolescents), family, and group psychotherapy patients. Applications are to be submitted through AAPI online. For a prospectus, please email Bibi Jathu-Bahadur, Asst Coord Mgr (bahadurb@nychhc.org). For internship questions, contact Dr. Pearson at (718)334-1371.

Program Description

The Doctoral Internship Program in Clinical Psychology at Long Island Jewish Medical Center-The Zucker Hillside Hospital takes place at: (1) Long Island Jewish Medical Center (which includes The Zucker Hillside Hospital, Cohen Children's Medical Center, and Long Island Jewish Hospital and (2) North Shore University Hospital (NSUH) The array of services offered at both campuses and their affiliated facilities affords a unique opportunity for training in diverse clinical settings with various treatment and assessment modalities. The training program facilitates professional development in a collegial and multidisciplinary environment. In 2014-2015, the Internship program will have 11 full-time interns in three clinical tracks: six in the Adult Psychology Track, two in the Clinical Child Psychology Track, and three in the Clinical Neuropsychology Track. The program provides a core of clinical and didactic experiences emphasizing those skills and information relevant to all psychologists. Applicants may only apply to one of the three Internship tracks (each of which have separate NATMATCH program numbers). Application requirements vary among tracks, which may be found in our web-based brochure.

Program Description

Training Directors: Thomas I. Stracuzzi, Ph.D. & Yitzchak B. Rosman, Psy.D.
Please feel free to e-mail: thomas.stracuzzi@va.gov or yitzchak.rosman@va.gov with any questions.
>VA Hudson Valley HCS, with campuses at Montrose and Castle Point, NY, offers a fully-accredited APA internship in Clinical and Counseling Psychology.(Contact APA, Commission on Accreditation, (202) 336-5979 for further information, or write: Commission on Accreditation, American Psychological Assoc., 750 First St., NE, Washington D.C. 20002.) As one of the largest psychiatric facilities in the VA, HVHCS offers opportunities to work with diverse populations in a variety of clinical settings. In addition, the hospital's location enables interns to take advantage of a rich array of educational and cultural opportunities available in the NYC area.<p />Program Overview ***Major Rotations: Interns are assigned to two Major Rotations, each of six months duration. These rotations take place on the PTSD and Substance Abuse Treatment residential units. Interns spend approximately two-thirds of their week fulfilling duties in these placements. ***Supplemental Rotations (6/12 months duration): The Intern will also be involved Supplemental Rotations that are estimated to occupy about eight hours each week (7 hrs-clinical, 1 hour-supervision). These may include experiences in Neuropsychology, Evidence-Based Treatments (DBT, CPT, CBT-I), Primary Care, Outpatient MH (Group/Indiv therapy) and Geriatric/Extended Care and Palliative/Hospice Care. ***Assessment: Interns are expected to complete 10 comprehensive assessment reports during the internship year. A completed report will be due at the end of each month, September (sample data provided) through June. ***Didactics: The Internship Training Program offers numerous weekly seminars. Offerings include regular seminars in psychodiagnostic testing and group psychotherapy case conferences. An overview of neuropsychology is offered throughout the year as well as a seminar on use of the Rorschach. A variety of other seminar are offered including: treatment of newer era Veterans, evidenced based treatment and Forensic psychology.

Program Description

The New York-Presbyterian Hospital internship in clinical psychology is offered by the Hospital's Division of Clinical Psychology. The internship is conducted in conjunction with the Department of Psychiatry of the Hospital and makes use of its various outpatient and inpatient clinical services, as well as those of the New York State Psychiatric Institute located on the same campus. The internship offers two training tracks: one specializing in work with adults (Adult Track), and one specializing in work with children and adolescents (Child Track). All interns participate in a core curriculum of courses, clinical rotations, and individual supervision. The Adult Track provides the intern with experience in both outpatient and inpatient facilities. Training in the Child Track takes place in outpatient services exclusively. There are ten funded internship positions; six positions in the Adult Track, and four in the Child Track.

Program Description

The Dept of Psychiatry of NY Presbyterian Hospital/Weill-Cornell Medical Center maintains an APA-accredited internship-training program at the Payne Whitney Clinic. The pgm offers an experiential model of training and upholds the educational goal of providing comprehensive, quality training in clinical psychology in both direct services and research domains. The pgmis designed to provide interns with diverse clinical experience in the treatment of a wide range of psychiatric disorders. Patients range in age from children to the elderly and are seen in inpatient and outpatient settings. The Hosp serves a large, diverse group of patients, insuring each intern the opportunity of working with patients representing a broad range of diagnoses, clinical problems, and varied ethnic and socio-economic backgrounds. Interns participate in a core curriculum of evaluation, diagnosis, assessment, psychotherapy and experience in the Psychiatric Emergency Room. Elective rotations are offered in many areas including the Anxiety and Traumatic Stress Program with CL work in the Burn Center, the Psychiatry Consultation Liaison Service, Geropsychiatry, Child Psychiatry, Inpatient Adolescent, Adult Inpatient Unit, HIV/AIDS, Women's Health, Women's CBT Inpatient Unit, Sexual Health, Public Health Psychiatry, Psycho-Oncology and the Personality Disorders Institute. The Research Placement Program is available to those interns who have completed or nearly completed their dissertation research. A comprehensive program of didactics, individual and group supervision are integral to the training program. Four interns are selected each year. Preference is given to candidates from APA accredited, clinical psychology Ph.D. programs. FOR INFORMATION AND BROCHURE go to our website at: http://www.cornellpsychiatry.org/education/psychology_predoc.html and click on 'Training Program in Clinical Psychology Brochure' at the bottom of the page.

Program Description

The Psychology Internship at the Jewish Board of Family and Children's Services admits three interns per year. The training model emphasizes a developmental view of personality and psychopathology based on an integrated understanding of the individual within the context of his or her family and culture. A major objective of the program is the development of a set of broad skills psychologists need to treat a variety of patient populations and conditions. The primary site for interns is our Manhattan outpatient clinic, where interns see adults/children in a generalist setting. Interns also apply to a secondary placement. The Early Childhood track offers experience with preschoolers, and the Child & Adolescent Track with children/teens. All interns work approximately three days in the primary setting, the Manhattan West Outpatient Clinic. They receive carefully supervised experience treating a culturally and diagnostically diverse client population. In addition, trainees elect a secondary placement that offers experience with either a pre-school population (Early Childhood Track) or with children and teens (Child & Adolescent Track). The tracks must be elected at the time of application. Interns in the Early Childhood Track provide testing and intensive play therapy to pre-school children in a therapeutic nursery. Interns in the Adolescent Track work two days with children, teens, and their families. Treatment modalities provided by interns include individual psychotherapy, play therapy, collateral family therapy, and couples therapy. Since psychodiagnostic assessment is an important aspect of the psychologist's role, interns learn the necessary conceptual and clinical skills to provide testing and consultation services to patients in their respective training settings. Coursework and supervised experience in projective testing (including the Rorschach) is required for application to the program (see "Other Requirements").

Program Description

MPC serves individuals with multiple co-morbidities, including severe and persistent mental illness, substance abuse, criminal histories, trauma, neglect and abuse backgrounds, poor education and work, disturbed interpersonal relationships, etc. Interns receive intensive supervision, in conjunction with experience in numerous clinical areas. These include, but may not be limited to: individual and group therapy, intakes, diagnosis, testing, team consultation, supervision of Externs, seminars, continuing education, etc. The internship also includes opportunities for involvement and training in Dialectical Behavior Therapy (DBT), neurocognitive rehabilitation, sex offender treatment, and trauma assessment and treatment. The intern's work week is held to 40 hours on-site, with no weekend or evening responsibilities. An intern process group is included as part of the experience to complement on-site training. It is a challenging, frustrating, exhausting and difficult experience, but equally so a very exciting, stimulating, gratifying and rewarding training opportunity.

Program Description

Six interns will make up the class of 2014 - 2015. Each intern will participate in two six-month rotations, all based within the department of rehabilitation medicine: inpatient brain injury/functional disabilities (including work with individuals with spinal cord injury and amputation) and outpatient. Interns receive two hours of individual supervision and two hours of group supervision weekly. Didactics are comprehensive. The program brochure can be found at <http://www.tbicentral.org> or contact Dr. Stewart for the most recent version.

Program Description

The internship's overarching philosophy of training follows the Practitioner-Scholar Model, emphasizing the integration of science and practice and the practical application of scholarly knowledge. The model stresses the importance of the development of self-reflection and awareness, flexibility, and openness to learning. Interns are trained to think critically and engage in scholarly inquiry. The program incorporates aspects of clinical, health, neuropsychology, and family systems theory. Six interns will work with adults (two, six-month rotations), two will work with adults and children and adolescents (two, six-month rotations). Each of the six adult interns will work have a 6-month outpatient rotation and a six-month inpatient rotation. There are two inpatient rotations. One is a general inpatient rotation and one includes cardiopulmonary, complex medical conditions. Each intern will receive intensive training in general clinical psychology skills, neuropsychological testing, cognitive remediation, and individual and group psychotherapy. There are four weekly seminars and a two-week Orientation Program. The two-week Orientation Program provides an opportunity to learn about the major diagnoses at Rusk, including Traumatic Brain Injury, spinal cord injury, cancer, neuromuscular conditions, cerebral palsy, and spina bifida. The weekly seminars include a Continuous Case Seminar, Cognitive Remediation, Neuroanatomy & Neuropsychological Assessment, and Psychological Interventions.

Program Description

The NYU-Bellevue Predoctoral Psychology Internship Program consists of three tracks: The Adult Psychology Track provides interns with experience in psychotherapy and assessment from a variety of theoretical perspectives. Although there is an emphasis on clinical work with adults, interns work with a diverse spectrum of patients in terms of age, demographics and clinical presentation. The Child & Adolescent Psychology Track operates in collaboration with the NYU Child Study Center, which emphasizes training in empirically-based, cognitive-behavioral interventions with children and families. Interns will also carry a small adult caseload, and will see child and adolescent patients at both Bellevue Hospital Center and the NYU Child Study Center. The Forensic Track operates in collaboration with the Kirby Forensic Psychiatric Center, a maximum-security state psychiatric/correctional facility located on Ward's Island. Training, which occurs both at Bellevue and Kirby, will emphasize the assessment and treatment of patients who have concurrent involvement in the legal/penal systems. Interns will also carry a caseload of non-forensic patients in various modalities. Despite the existence of separate tracks, the internship is one cohesive program. All 14 interns will gain experience treating adults, adolescents and children in individual, group and family modalities. Interns will participate together in meetings with the program director, seminars, colloquia, case conferences, a support group and family therapy training. All interns complete three four-month rotations, chosen from a wide variety of inpatient and outpatient options at Bellevue Hospital Center, the NYU Child Study Center, and the Kirby Forensic Psychiatric Center. Outpatient electives are available through the Bellevue/NYU Program for Survivors of Torture and the World Trade Center Medical Monitoring and Treatment Program.

Program Description

The training program seeks to expose interns to the wide variety of functions a psychologist performs within a university community. The training program follows a practitioner model, meaning that our training goals focus on the acquisition of skills needed to practice competently as a professional psychologist. That our program's goals represent a practitioner model should not imply that we see the job of training interns as limited solely to passing along a set of practice-oriented skills. Rather, we view the competent practitioner as defined not just by her/his skills; the competent practitioner is one who is also self-aware and who has grounding in the scientific and scholarly underpinnings of psychological practice. Thus, we think of the training experience as having three facets: skills, scholarship, and self-awareness. Our staff shares certain professional values that complete our view of the ethical, skilled practitioner, and which guide us as we design and implement training strategies. Our overall goal is to prepare interns for entry-level positions in which they provide culturally diverse, late-adolescent and adult outpatient populations with services in the areas of individual and group psychotherapy, outreach programming, assessment, and clinical supervision of intern/ extern staff. Special program highlights include training in group psychotherapy and multi-cultural competency. The training program is also noteworthy for the extensive consultation opportunities that provided. Specifically, interns at the Counseling Center provide the full range of services to the student population for 12-17 hours per week. Another 12 hours per week consist of supervision and in-service seminars. At least one hour release time per week may be granted for the pursuit of dissertation research. The remainder of the time is spent on special projects and administrative work. CoA Contact Information:202-336-5979

Program Description

The Clinical Psychology Internship at St. Lukes Roosevelt, an urban, teaching hospital, is designed to provide interns with a year-long intensive, generalist, clinical experience with diverse patients in a wide range of treatment settings. The Internship consists of Child and Adult Tracks — which share a common integrationist approach. Within this, emphasis is placed on evidence-based intervention, psychotherapeutic process, and attunement to ethnocultural diversity. Applicants apply either to the Adult or Child Track. Both provide similar clinical and didactic education — while generally offering separate, developmentally-appropriate Rotations. Adult Rotations include inpatient units, various intensive outpatient programs and outpatient clinic, and an adolescent school-based therapeutic milieu, for Adult and Child interns. Child Rotations include a parent-infant program, adolescent school-based therapeutic milieu, neuropsychological assessment and outpatient clinic. Outpatient work is emphasized. Interns have primary responsibility for their patients under supervision. Education and training integrates medical model, psychodynamic, cognitive behavioral, dialectical behavioral, and other evidence-based techniques. Seminars and didactic courses are an important part of training. Classes include modules such as psychotherapeutic process, working with patients with character disorders, severe mental illness and/or substance use disorders, child psychopathology, systems theory, family therapy, and psychopharmacology. Child interns conduct neuropsychological and comprehensive psychodiagnostic assessment on a regular basis; adult interns conduct comprehensive psychodiagnostic assessment, on a regular basis. The Internship is a valued part of the Department of Psychiatry & Behavioral Health — which includes a biobehavioral research division, substance abuse treatment services, Child and Adult Psychiatry Residency Programs, and more programs.

Program Description

The Manhattan VA provides a broad-based clinical experience within a practitioner-scholar model of training. Our primary goal is to teach the basic clinical principles and skills essential to the practice of psychology. We provide interns with a broad range of experiences in assessment, intervention, and consultation with a variety of patients in medical and mental health settings. Training is informed by scientific inquiry, critical thinking, and active learning. Our program consists of 3 major rotations (4 mos. each) in Inpatient Psychiatry, Health Psychology/Primary Care, and PTSD. Half of interns' time is spent on the major rotation. The rest of their time is comprised of ongoing, year-long assignments in neuropsychological and personality assessment, psychodynamic psychotherapy, CBT, specialized treatment of PTSD, and group psychotherapy. The various clinical training assignments are enhanced by a diverse program of supervision, seminars, and peer review presentations within the VA, as well as at neighboring institutions such as Bellevue and NYU Medical Center. Interns receive intensive supervision, mostly on an individual basis, for each rotation and training experience (generally 5-6 hours per week). Our program uses an apprenticeship method of training, providing opportunities for interns to work side by side with supervisors. We also make every effort to foster each intern's creativity, growth, and autonomy. Interns carry their own cases and participate in interdisciplinary team meetings and peer review presentations independently and with their supervisors. Supervisors utilize a variety of treatment orientations and approaches, including: psychodynamic, CBT, DBT, systems, and eclectic modalities. For a full description of our internship, please see our program brochure in its entirety at <http://www.nyharbor.va.gov/docs/nypsychintern.pdf> or email the Training Director to request that a brochure be mailed to you.

Program Description

Our interns provide: brief and long-term individual therapy, group therapy, testing, workshops, and if interested may supervise peer counselors and teach an orientation course to Freshmen. Training and supervision are provided for the teaching and supervision experiences. We serve students from varied social, economic, and ethnic (approximately 75% international students) backgrounds with a wide range of emotional disorders. The internship training can also be modified to accommodate educational needs and interests. For example, interns may provide consultation to the Early Childhood Learning Center, the Career Development Center, or work towards program development among other options. Interns are also expected to conduct college-wide activities, such as workshops and depression/alcohol/eating disorder screening events. Please visit our website for more details.

Program Description

Interns are involved in a wide range of clinical training activities. The internship training program provides opportunities for interns to develop new skills, as well as to refine skills they have acquired through graduate training. Through the internship program, interns develop proficiency and competency in the areas of assessment, counseling, parent and teacher consultation, behavioral assessment and intervention, crisis intervention, preschool screening, educational interventions, in-service presentations, and research. As The School serves children from varied ethnic, cultural and socioeconomic backgrounds, as well as students with varying educational and psychological needs, interns are provided with diverse training experiences. Each intern receives a minimum of two hours per week of regularly scheduled formal face-to-face individual supervision and two hours of group supervision. Supervision is provided by doctoral-level staff psychologists who are licensed in New York State. Each intern is assigned two primary supervisors and receives at least one-hour of individual supervision from each primary supervisor. Interns attend a weekly training seminar provided by staff members and professionals in the community, as well as a weekly full-CST team meeting.

Program Description

Hamilton-Madison House is the largest mental health provider for the Asian American community on the East Coast. The internship receives the Asian American Psychological Association-American Psychological Foundation Okura Foundation Fellowship to provide specialized training to interns to provide culturally competent treatment to Asian-American clients. Interns will have a variety of training opportunity in providing individual, group, and family therapy. The clientele is very diverse in terms of clinical diagnosis, age, gender, and ethnic background. The opportunity to work with substance abuse population is also available. PROSpect Place, the only program in the nation that provide personalized recovery oriented services to the Chinese population, offers an unique experience for interns to learn holistic and evidence-based treatment approach for individuals with severe mental illness. Interns are mentored and supported to develop their own clinical philosophy and professional identity throughout the internship.

Program Description

MSAHC is an outpatient facility that provides free and confidential medical, mental health, family planning and health education to adolescents 10 to 24 years old. The MSAHC has a culturally diverse population of young people with a variety of psychosocial difficulties, psychiatric diagnoses and severity of illnesses. Mental health services include individual, group and family psychotherapy; comprehensive psychological testing; psychiatric services; and treatment for teen parents and their babies. The interns assess the stress level of the teen parents and the developmental progress of the babies. Interns have the opportunity to participate in a research project involving the teen parent population. The MSAHC has two interns who, in their training year, experience personal and professional growth and development, which contributes to their emergence as competent professional psychologists. The interns are expected to work approximately 40 hours per week (with some evenings required). The internship experience is divided among direct clinical service, didactic instruction and supervision. The MSAHC has monthly in-service presentations on topics relevant to our adolescent population. The interns can attend weekly seminars and grand rounds presented by staff psychiatrists, psychologists and psychoanalysts at Mount Sinai Medical Center. Interns carry a diverse caseload of approximately 15 individual patients, in addition to facilitating family and group therapy. The interns conduct 3-session intake evaluations that focus on developing diagnoses and treatment plans. The interns participate in weekly case conferences with other mental health professionals to discuss new and ongoing cases. There is also ongoing collaboration with medical staff regarding all relevant cases. Interns receive a estimated length of stay. On SPTP, all interns will work directly with sex offenders who have been found to meet the criteria of Sexually Violent Predators pursuant to Kansas law. Specific activities will be assigned by the Supervising Psychologist of SPTP and will include psychological testing, report writing, co-facilitating/facilitating various therapy groups including phase groups, DBT groups, Co-Occurring Disorders groups, and individual therapy. All Pre-doctoral interns will participate in diagnostic assessment, psychological testing, treatment planning, and individual/group therapy. Pre-doctoral interns will become proficient in test selection and administration, report writing, crisis intervention, ethics, diversity, program development, and interdisciplinary treatment team functioning. Interns will complete a 4-day a week primary rotation for 12 months and two 6 month 1-day a week secondary rotations.

Program Description

The 12-month internship in a smaller college setting offers a friendly and supportive atmosphere with strong individual attention to intern experience and growth. We prepare professionals with generalist therapeutic skills and multicultural competency. We also strive to develop interns' professionalism and professional identity as they consolidate their graduate learning and their professional style. While the internship is well structured, the size of the staff and college allow for informality, flexibility, and open opportunities in a variety of professional activities. The internship is particularly excellent preparation for interns pursuing a career in college or university counseling centers. The Counseling Center is a well-utilized service providing individual short-term counseling, crisis services, couples and group counseling, and alcohol and other drug counseling. In addition, we have a busy outreach and consultation program providing education and support for students, faculty, and staff. The staff is multi-disciplinary, consisting of 3 licensed psychologists, a certified social worker, a licensed mental health counselor who is also an alcohol and drug counselor, the 2 doctoral interns, and, in some years, MSW intern or practicum students from nearby universities. The training model is a practitioner-scholar model which prepares students for applied settings and direct clinical service, and encourages life-long study of the scientific and scholarly literature as well as rigor in applying established theory to direct practice. We also favor an apprenticeship approach: that is, on-the-job training with individualized attention, close supervision and mentoring by experienced professionals. The College at Oneonta is a liberal arts college with a pre-professional focus. The 250-acre campus overlooks the scenic Susquehanna River Valley in Central New York, and is located midway between Albany and Binghamton.

Program Description

JCCA has 6 internship slots: 3 at our Westchester Residential Treatment site in Pleasantville New York, 1 in our Brooklyn Foster Home Services site, and 2 at the Bronx Foster home site. Prospective applicants have the opportunity to apply to individual sites or all three sites as there are separate match numbers. All three sites offer the opportunity to work with youth and families within the foster care system. Trauma focused treatment, in the context of the Sanctuary model is a strong component of the treatment youth receive. Please see our brochure for additional information

Program Description

Our internship is designed to accommodate a variety of career models, ranging from scientist-practitioner to practitioner-scholar. We feature tracks in adult psychology, child and adolescent psychology and deaf wellness. This generalist internship is predominantly clinical and provides training in a variety of interdisciplinary settings with individuals with a wide range of mental health problems. We also believe that our internship prepares psychologists to translate the results of research into effective practice in an array of settings. Please visit our website for more information: www.urmc.rochester.edu/smd/psych/educ_train/training/doctoral/

Program Description

The basis of the UCC training program is an apprenticeship model that promotes the professional growth of the intern with the goal of enabling him/her to competently function in doctoral level positions in psychology. To this end, the internship program employs a structured experiential model with exposure to gradually increasing levels of professional responsibility. A series of graduated and comprehensive learning tasks are designed to meet the following objectives: competencies in diagnostics and clinical assessment, skills in delivering effective time-limited and ongoing treatment, ability to effectively present outreach programs, provision of high quality supervision, practicing ethical and responsible clinical behavior, increasing sensitivity to others including awareness of multicultural issues, and increasing one's awareness of self. The training experience is supported by intensive supervision, seminars, and clinical case conferences. These experiences include provision of time-limited psychodynamic psychotherapy, year-long interpersonal process group psychotherapy, short term skills based group therapy (e.g., DBT, CBT), on-call/emergency services, provision of supervision to grad students, and campus consultation and education. A significant strength of the program lies in the intern's opportunity to work closely and intensively with licensed psychologists. On a weekly basis full time interns receive 3 hours of individual supervision, 2 hours of group therapy supervision, participate in several case-based seminars, a supervision of supervision seminar, and a clinical conference where senior staff present their work. Additional supervision is available as needed. Two-year part-time positions are available and are partially affiliated with the University of Rochester's doctoral program, meaning qualified UR candidates are ranked first but others are welcome to apply. The full time positions are not affiliated.

Program Description

Staff at the CAPS are multidisciplinary and versed in multiple treatment modalities, but primarily use contemporary psychodynamic and integrative paradigms to inform training and treatment. We believe these perspectives are broadly inclusive in their depth of understanding and applicability, particularly for Stony Brook University's incredibly diverse population: students come from all corners of the globe, and use our services in proportion to their representation on campus, so interns encounter a unique training experience in culturally competent clinical practice. In addition to training and supervision in brief and longer term individual and group interventions, interns gain exposure to working with triage in on-call and crisis interventions. Interns supervise practicum students and receive supervision in conjunction with this experience; they also gain exposure to mindfulness meditation & how it may be incorporated into more traditional therapies. Our seminar curricula include literature and training in the integration of theory and practice, and ways in which to consider appropriate matches between client and treatment modality. Central to all training is the thoughtful integration of multiple treatment techniques into a fundamentally (contemporary relational) psychodynamic framework. Interns select one of 5 Spring Rotations: 1. MA/BAC: Mandated Assessments and Behavioral Assessment Committee: manage students of concern/in crisis and work within family, educational & legal systems toward resolution. 2. Center for Prevention and Outreach (CPO):Exposure to a myriad of programs for primary prevention (involving staff training, theater improv, peer training, etc.) in the areas of depression/suicide, sexual violence and alcohol and other drug use. 3. Associate Training Director: Exposure to academic & administrative responsibilities of a psychologist overseeing a vibrant training program within a systems framework. 4. Associate Clinical Director: Exposure to academic & administrative responsibilities of a psychologist overseeing a vibrant clinical services delivery program within a systems framework. 5. Health Professions Satellite Clinic: Provide treatment and innovative community-based interventions to medical, dental, nursing and other health professions students in a thriving satellite office.

Program Description

We offer training in professional practice, with an emphasis on child/adolescent psychology. We utilize a Practitioner-Scholar training model in which interns develop skills in: assessment; intervention; relationship; consultation/management; research and evaluation. The focus is on experiential learning in supervised practice, supplemented by didactic seminars and workshops. Our population is largely made up of minority, lower income adolescents and pre-adolescents who present with histories of trauma and a wide range of psychopathology, from adjustment disorders through psychotic disorders. Each intern is assigned to a full-year placement on a primary treatment unit and also provides services to our diagnostic units; the intern may also have the opportunity to arrange an elective placement in one of a number of settings. Supervisors' orientations are generally CBT or psychodynamic. Under supervision, interns perform individual, group and family therapy, crisis intervention, treatment team consultation, milieu treatment, mental status evaluation interviews, psychological testing, risk assessments, and other clinical duties. In addition to our regularly scheduled seminars, we offer colloquia by guest speakers, and there are opportunities to participate in training meetings at nearby hospitals and universities. We give preference in hiring to former interns and, historically, approximately half of our psychology staff have been former MercyFirst interns.

Program Description

HPC's predoctoral internship in Clinical Psychology is designed to provide advanced training in the core skills of clinical psychology as they are applied in a community-based system of mental health services. HPC has originated a series of internship experiences based upon broad areas of interests. At present, HPC has funding for three internship positions. At the time of his/her decision to attend, each intern selects a major area of interest which include: (1) HPC Adult (State Psychiatric Center) (2) HPC Child (State psychiatric center) (3)HPC/Madison County (rural community mental health center and State Psychiatric Center). Interns spend the first two weeks meeting the faculty and visiting the rotation sites. The internship consists of two or more basic rotations, one of which is the precommitted rotation (half-time for the full training year). In addition, the intern is able to elect additional six month or one year rotations. In the selection of rotation sites, our approach is to give interns a full range of choices of patient populations and rotation sites based on our core training objectives and each intern's career plans and professional goals. Our weekly seminar program complements the rotation experiences. Treatment seminars are offered for individual therapy (case conferences) as well as specific clinical topics (e.g., motivational interviewing, trauma, dialectical behavior therapy, evidence-based treatment for schizophrenia). In addition, we teach a year-long psychological assessment seminar and a variety of professional seminars, such as program evaluation, ethical and multicultural issues, and a seminar on the process of becoming a therapist.

Program Description

The Syracuse VAMC Psychology Internship follows a practitioner-scholar model and emphasizes generalist skills as well as exposure to specialty clinics and populations. We offer a specialized Rehabilitation Psychology track in addition to the General track. The internship is anchored (both tracks) by year-long experiences in the Outpatient Mental Health Clinic (~12 hrs/week) and Assessment (6 hrs/week). Both tracks share didactics and other professional activities. The intern in the Rehabilitation Psychology track devotes about 20 hours/week to the specialty area. The General track includes additional rotations that follow a trimester schedule (most are 4 months in duration). These include PTSD Clinic, Substance Abuse, Neuropsychology, Home-Based Primary Care, and Health Psychology. Some allow for a 4-hour rotation extension beyond the 4 month trimester. Opportunities for a rotation in Research, Inpatient Psychology, or ProgramDevelopment are sometimes available. Some elective experiences have been available to Specialty Track interns as well.

Program Description

Pre-Doctoral Psychology Internship Program. Internship training opportunities include year-long rotations in both community-based out-patient mental health clinic and specialized services program. Interns participate in all aspects of assigned programs, including service delivery, program development, and continuous quality improvement projects. Training, direct care experience, and supervision is provided in a wide variety of treatment modalities and specialty areas. All interns participate in a weekly training seminar, individual supervision, and all agency-sponsored conferences. Psychological testing experience is provided for all populations served and in a variety of settings.

Program Description

For over 50 years, Upstate Cerebral Palsy has offered services to a broad range of individuals with developmental and mental health disabilities and their families. Currently, the agency covers a 4-county service area through 50 locations serving over 10,000 consumers and employing 1,600 staff. Due to the broad depth of services provided by Upstate Cerebral Palsy, interns will develop assessment and treatment skills for all ages of individuals with developmental disabilities and related mental health issues. The training sequence at Upstate Cerebral Palsy has multiple rotation opportunities. The rotations take place within the adult and child residential, educational, and community-based programs at Upstate Cerebral Palsy. During the rotations, interns will provide a variety of psychological services within treatment teams comprised of a broad range of professionals. Interns receive 2 hours of individual supervision per week and at least 2 hours of didactic training. Upstate Cerebral Palsy is centrally located in upstate New York in the beautiful foothills of the Adirondacks. Affordable cost of living and many recreational and leisure activities make this an ideal place for an internship. Please visit our website for more information about the agency and internship at www.upstatecp.org.

Program Description

Pilgrim Psychiatric Center is a state hospital which serves severely and persistently mentally ill patients. Our internship offers broad-based, varied training experiences with exposure to a full-spectrum of DSM-V diagnoses. Interns learn through a practitioner/apprenticeship process how to provide comprehensive psychological services, which include: individual and group psychotherapy, psychological assessment, and treatment planning. Possible placements include: admissions service, psychiatric rehabilitation wards, and forensic unit.

Program Description

Each intern is usually assigned to one of several community-based outpatient mental health clinics or programs for one to three days each week. At these "primary" sites, the intern conducts individual, family and group therapy, psychological assessments, and consultation to members of a multi-disciplinary treatment team. Each intern spends from one to three days weekly at one or more rotational placements. These rotations may include forensic, trauma, DBT, early childhood, school-based, sex offender, geriatric, bereavement, learning center, and other specialized programs. The intern spends the fifth day participating in supervision and didactics. Psychological testing experience is provided in forensic, clinical and/or educational settings. Interns are required to participate in at least one research project and to give at least two trainings during the course of the year. These requirements are usually satisfied in the ordinary course of the intern's duties at one of his/her assigned sites. In addition, qualified interns are expected to provide supervision to psychology externs and other graduate students. WJCS is a vibrant agency, hosting an exciting array of programs (many cutting edge) that meet diverse community needs. (Consult the WJCS general website, www.wjcs.com, for a current listing). The agency will make an effort to give an intern exposure to programs of special interest that meet his or her individual training needs, when other internship requirements have been met.

Program Description

Two child-focused internship tracks available; outpatient clinic (ages: birth - 18) with some adult work as well and residential/day treatment (ages: 4-15). Outpatient experience includes early childhood treatment and assessment. Campus track has good opportunity to work within campus-based special-ed school consulting with teachers and other professional staff, thus best suited for those receiving degree in school psychology. On Campus children have trauma history and/or on spectrum. Design and implementation of behavioral plans. Also involved with Response to Intervention (RtI) monitoring and Positive Behavioral Interventions and Supports (PBIS).

Program Description

The program encourages interns to develop a solid general set of clinical skills. These skills include assessment, psychodiagnosis, individual and group psychotherapeutic skills, consultation, and assumption of a professional role. All training rotations provide ample opportunity for direct clinical experience. All supervisors provide individualized evaluation and feedback on clinical skills and the intern's professional growth as it occurs within a clinical setting. Rotations include: Outpatient Clinic Trauma (required), Primary Care/Mental Health Integration/Behavioral Health, Co-Occurring Disorders (Residential and Outpatient) and Geriatric/Palliative Care/Hospice Care. Emphasis areas include: Sexual Trauma, Women Vets, Younger Vets, Combat Trauma and Neuropsychological Assessment.

Program Description

This program provides in-depth training in the various activities that psychologists provide in a University Counseling Center setting. The training model is a "Practitioner-Developmental" model that emphasizes competent practice, developmental training, diversity, the science of psychology, and professionalism. Interests and theoretical orientations of staff members vary widely. Interns are encouraged to develop their own interests and orientations. Interns are provided experience and develop competence in individual and group therapy, career counseling, assessment, crisis intervention, outreach, consultation, supervision, ethics, diversity, and professional behavior. In addition to service activities in these areas, interns participate in a training seminar, assessment seminar, a supervision seminar, a career seminar, peer supervision, a process meeting, and staff meetings. Interns participate in two hours of supervision with a licensed psychologist and an additional one hour of consultation/supervision with another staff member. Additional supervision is provided for group therapy. While a core curriculum exists, interns are also provided with ample time and opportunity to develop special interest areas including but not limited to any of the above listed areas, eating disorders, supervision/training, trauma, research, paraprofessional programming, and student development administration. The staff strives to create a work and learning environment that is supportive, stimulating, and fun! Interns are fully integrated into the staff and their presence is highly valued. Ample opportunity also exists to explore and enjoy a resort-type, mountain environment that is rich with outdoor recreation and fantastic scenery.

Program Description

Due to the tremendous resources in this area and the Butner site's history of excellence, this location has been developed as a Federal Correctional Complex. The 770-acre reservation includes an 850-bed Federal Correctional Institution (FCI), an 900-bed Federal Medical Center (FMC), which includes a 300-bed work cadre, a 1300-bed Low Security Correctional Institution (LSCI), a 1200 bed medium/high security facility (FCI-II), and a 300-bed minimum security Federal Prison Camp (FPC). The FCI provides a wide range of psychological and rehabilitative services to a varied population including a residential Commitment and Treatment Program (CTP) for Sexually Dangerous Persons, a model residential Drug Abuse Treatment program, and a Mental Health Transitional Care Program. The Federal Medical Center is JCAHO accredited and serves the needs of both voluntary and committed mentally disordered offenders, assists the federal court system by providing forensic evaluation services for pretrial and pre-sentencing detainees, and delivers a range of inpatient medical care specializing in oncology, diabetes care, dialysis, and surgery. The Low Security, FCI-II, and Camp facilities serve general offender populations with appropriate security needs, including those with less acute medical needs. Combined, these facilities offer an extraordinary range of applied activities for internship training. Our objective is to help doctoral candidates transition from student to practitioner, becoming well-rounded generalists in the clinical applications of psychology, using experiences with correctional and forensic populations to facilitate this process. The goals of the internship program include the development of professional autonomy, integration of science and practice, development of specialized knowledge of forensic and correctional psychology, and provision of service to diverse and underserved clients.

Program Description

The Department of Psychology offers 4 full-time internship positions. Applications are limited to students who are doctoral candidates in APA-approved psychology programs. Those identifying a major focus area in adult, geropsych or forensics must be from a clinical program. For the child-youth focus, applicants from either clinical or school psych programs are accepted. The stipend is \$25,648. 20 days of personal leave and 11 state holidays are included. Up to 10% time across the year can be used for research. The internship began at Dorothea Dix Hospital in Raleigh. We were accredited by APA during our first year of training (2003-2004) for three years. In 2007 we were re-accredited for five years. In 2008, the newly built Central Regional Hospital (CRH) in Butner took over Dorothea Dix Hospital, which was renamed CRH-Raleigh campus, and the internship was renamed Central Regional Hospital psychology internship. Over the next 4 years, services from the former Dorothea Dix Hospital were consolidated into CRH. The internship kept APA apprised of the progress of the hospital consolidation each year. The moving of services was completed in July 2012 with the Forensic Minimum security unit. The Child Outpatient Clinic continues to be physically located at the former Dorothea Dix Hospital campus. In February 2013, administration of the Child Outpatient Clinic was taken over by UNC Hospitals, but the clinic continues to serve the same population from the same location. Child-youth applicants are advised that they are likely to have rotations in both Butner and Raleigh. CRH is a state hospital setting which includes a comprehensive range of services with inpatient treatment wards for children, adolescents, adults, geriatric, and forensic populations, as well as outpatient services for children and families, and pretrial evaluations in forensics. CRH serves mostly low income patients. Interns work with a highly diverse patient population including substantial numbers of African Americans and persons of Hispanic/Latino descent, and a wide variety of other ethnicities with less frequency, including Native Americans and persons of Asian descent. Even though CRH is a state hospital, it was designed in 2007 with large open areas, large windows, and other elements intended to maximize the positive outlook and potential of patients and staff. The 432-private room hospital serves the acute mental health needs of adults and adolescents from 26 counties in central North Carolina, and houses the only child inpatient unit and forensic services units in the state, which serve the entire state. For more information: <http://www.ncdhhs.gov/dsoht/services/crh/index.htm>

To receive an Internship Manual via email, contact David Hatterm, Ph.D. at David.Hatterm@dhhs.nc.gov.

Program Description

We train Interns to be competent clinicians, who are self aware, interpersonally related, motivated to grow, and who integrate awareness of multicultural, ethical and scientific considerations into their practice of psychology. We utilize a practitioner-scholar model and developmental sequential training process. Interns participate in a wide array of core university counseling services including: triage interviewing and decision making, crisis services, intake clinical assessments, brief individual therapy, ongoing individual therapy, group therapy, outreach, clinical supervision of practicum trainees, academic intervention assessments, evaluations of students who come to public attention and consultation and liaison activities. Interns will have opportunities to work closely with a large and diverse staff of psychologists with a wide range of theoretical orientations (including interpersonal, cognitive-behavioral, object-relations, feminist, eclectic) and areas of specialization (such as gender issues, LGBTQ identities and communities, disordered eating, sexual and relationship violence, substance abuse, spirituality and mindfulness, grief, suicide prevention, career development, and crisis intervention). Interns will be part of our multidisciplinary team of psychiatrists, social workers, and health educators. They will participate in didactic seminars, service delivery teams, staff meetings and staff professional continuing education programs. Interns will engage in a year long multicultural mentoring experience and will be expected to actively participate in activities designed to increase multicultural awareness, knowledge, and skills and to work with clients of diverse identities and experiences.

Program Description

Internship in professional psychology is developmental in nature and subscribes to the practitioner/scholar model of training. Our internship emphasizes both applied and academic learning methods and has as an overarching objective, facilitating achievement of interns' professional identities and competencies in preparation for successful placement in a number of professional career roles. Interns from our program typically find post internship employment in college counseling centers, in academic departments as faculty members, and in community mental health agencies and report that the training has well prepared them for any of these professional roles.

Program Description

Counseling and Psychological Services (CAPS) is offering two positions for the 2014-2015 year (August 1st, 2014 – July 31st, 2015.) Our 2000-hour internship program includes opportunities for individual and group counseling, walk-in triage, crisis intervention and initial assessment services, specialized assessments and services, outreach services, consultation, and specialized rotations in psychological assessments and supervision and training of masters-level trainees.

Counseling and Psychological Services (CAPS) exists to enhance the psychological growth, emotional well being, cognitive development, and learning potential of students in and out of the classroom. This aim is achieved through promotion, facilitation, recommendation and provision of mental health services for the University community. A holistic-wellness model, an ecological perspective, and a teamwork orientation provide the foundation for the development and delivery of CAPS services. Counseling and Psychological Services operates within the division of Student Affairs and reports directly to the Assistant Vice Chancellor for Student Affairs. Counseling and Psychological Services is accredited by the International Association of Counseling Services (IACS) and is a member of the Association of Psychology Postdoctoral and Internship Centers (APPIC,) the Association of Counseling Center Training Agencies (ACCTA,) and the Center for Collegiate Mental Health (CCMH).

Other Application Requirements
See website under "Application" for program requirements. Apply to 1 track only as tracks are separate and do not overlap. Tracks listed on our website: Child Clinical; Child Pediatrics, Adult Health, Adult CBT

Program Description

Duke University Medical Center's Clinical Psychology Internship Program provides one year of doctoral-level internship training in essential skill areas of clinical psychology: assessment and diagnosis, effective intervention, consultation and evaluation, and supervision skill areas. The training model is scientist-practitioner. Two tracks are offered: Adult and Child, each with specific areas of concentration. Adult track consists of Adult CBT and Adult Health. Child track consists of Clinical Child & Pediatrics. These do not overlap so applicants must apply to one only: CBT, Health, Child, or Peds. Please see our website for a more detailed description about our program, the application process, our requirements for applying, and other information that may be useful to those interested.

Program Description

The Haymount Institute for Psychological Assessment is an outpatient private clinic serving children, adolescents, adults, couples, and families in a community setting. Our client population includes the diverse demographic mix of individuals from Cumberland, Hoke, and surrounding counties in North Carolina. Our services are provided by a culturally and professionally diverse staff of psychiatrists, psychologists, clinical therapists, substance abuse specialists and holistic health providers. Our clinicians represent a range of psychological and treatment perspectives including systemic, cognitive-behavioral, biological, developmental, and psychodynamic. Having this diversity of perspective increases our ability to understand clients in an integrated manner. Services provided include individual and group therapy, psychological assessment, substance abuse counseling, and medication management. The Haymount Institute for Psychological Assessment will provide a minimum of two hours per week of didactic training on various areas of clinical practice to include ethical and legal issues commonly encountered in private practice, psychological assessment, diversity issues, marital and family systems issues, school and community based intervention, and training in various intervention approaches. In addition to the didactic training, ongoing training and supervision will be provided in the administration, scoring, interpreting, report writing, delivery of results, and consultation throughout the year. Interns will also receive a minimum of two hours per week of formal supervision from a licensed doctoral level psychologist affiliated with this agency. The training in psychological assessment is of primary focus, and interns will learn how to provide ongoing consultation to various agencies tasked with a client care. It is anticipated that by the end of the internship year, interns will have completed 40-50 integrated psychological reports.

Additional Information About Training Opportunities

Opportunities for interns to provide individual psychotherapy are very limited though formal didactic training on evidence-based intervention strategies will be provided. Interns may be afforded opportunities to co-facilitate group therapy with a licensed provider. Due to the close proximity to a military installation, many patients come from a diverse background, and many are Spanish speaking. Although Spanish proficiency is not required, it is preferred.

Program Description

The internship is located at a maximum/close custody prison which houses 1000 adult male inmates. The prison has one of two residential programs for male seriously mentally ill inmates and represents the largest mental health program for males at this custody level in the system. Rotations include working in outpatient and residential mental health. There are seven psychologists and two psychiatrists on staff. The residential program operates on the treatment team model. The outpatient program operates on a cognitive behavioral model, with some opportunity for longer term treatment where warranted.

Program Description

Broughton Hospital trains interns to provide a broad array of psychological services within the public mental health sector. The program follow a practitioner-scholar model. Interns are expected to expand on their proficiency in assessment, treatment (individual and group), and professional skills and development. Interns obtain inpatient experience and training as well as experience working as a unit psychologist. Most adult patients at the hospital have a severe and persistent mental illness. The internship typically involves three four-month rotations on three of the following areas: adult admissions (acute), geropsychiatry, adult extended treatment services, which is a service for adults who require longer term treatment, and the adolescent services. Some experience may also be gained on the Deaf Services unit. Minor rotations may be in one of the above rotations or in the Dialectical Behavior Therapy program or the Capacity Restoration program for persons who have been found not capable of proceeding to trial. All interns receive individual doctoral-level supervision on all assigned rotations. Each intern receives a minimum of two hours of individual supervision and two hours of group supervision each week, but many interns receive much more informal supervision too. Interns participate in weekly seminars with topics on assessment, treatment, and areas of professional development.

Program Description

The Psychology Internship Program provides comprehensive generalist training to interns from APA-approved clinical and counseling psychology graduate programs in an intellectually challenging and professionally nurturing environment. Our philosophy is that comprehensive generalist skills form the foundation for competent, independent, professional psychology practitioners. As practitioner-scholars, interns are expected to develop a theoretical framework for the application of therapeutic skills. Core competencies include assessment (including using psychometric measures), differential diagnosis, case consultation, and interdisciplinary team functioning. An additional focus of training is on empirically validated treatments and training in telehealth. Interns have ongoing supervision, the intensity of which will taper throughout the internship as the interns progressive and cumulative training leads toward independent practice. Structure: Interns complete a minimum of three rotations during the internship year: a 12-month, 50% time rotation providing outpatient and consultation services; a second rotation (6 month, 25% time) in an inpatient setting; and an elective rotation (6 month, 25% time), selected according to interests and training needs. In all settings, participation in the interprofessional team process is an integral part of training. Interns receive 4-6 hours of formal supervision a week including up to two hours of group supervision. Consistent with a mentoring approach, interns may work with several supervisors throughout the year in their inpatient and their outpatient rotations. Didactic training: Interns spend an average of 3 hours a week in seminar and didactic activities designed to produce practitioner-scholars capable of translating theory, knowledge, and scientific inquiry into practice. Didactic offerings incorporate the application of an empirical knowledge base to case formulation, treatment planning, and treatment implementation.

Program Description

The internship program provides an intern with exceptional generalist training to prepare him/her for entry level clinical practice in a variety of settings. The program follows the practitioner-scholar training model wherein the professional practice of psychology is informed by scholarly and scientific inquiry. Approximately 50-60% of intern training focuses on psychological and behavioral assessment, approximately 25% on individual psychotherapy, 5% on group psychotherapy, and 5-10% in various consultation roles. Presenting problems are highly varied, and interns can anticipate working with a broad spectrum of diagnoses represented in the DSM-IV. Supervision consists of 2 hours of individual supervision and 2-3 hours of group supervision per week. Rotation A provides an intern with generalist training and will involve psychological assessments for a variety of referral questions. Also during this rotation, interns are exposed to applied behavioral analysis with adults with developmental disabilities. Rotation B has a primary focus on evaluations of parents whose children are in foster care and who are at risk for termination of parental rights. Also during this rotation, interns are exposed to applied behavioral analysis with children and adolescents who have behavioral problems. Rotation C has a primary focus on court-ordered evaluations. During this rotation, interns may have the opportunity to complete sexual offender risk assessments on adults and/or children and adolescents. Ongoing duties will include individual therapy, consultation, and attendance at various agency meetings. Interns will also attend weekly multidisciplinary case conferences. At one point during the later part of the internship, the intern will receive a subpoena to appear at a mock trial as an expert witness. Interested parties are encouraged to request our brochure, which describes the duties of the internship in more depth.

Program Description

UNDPIC is fully APA accredited. The program offers 2 intern positions. All positions are devoted to full-time work at the UCC with 4 days/week of clinical experience. Training is focused on a Practitioner/Scholar model. UNDPIC provides a flexible and balanced set of experiences necessary for the emergence of competent professional psychologists. These experiences enable interns to practice and enhance previously learned skills, develop new skills, and facilitate personal and professional growth. Training is focused on: 1. A broad range of clinical skills. 2. Content areas relevant to intern's career goals. 3. Ethical and professional standards central to practice of psychology. 4. Skills and knowledge specific to university counseling center setting. Interns are expected to demonstrate the assessment, psychotherapy, and consultation competencies necessary for practice as an entry-level psychologist and to demonstrate the skills and abilities necessary to continue their professional development. The most useful attribute of the intern is a stance of one who comes to learn and to eventually contribute as a professional. The process involves all of the staff and is one of interaction, challenge, responsibility, trust, and vulnerability. We relish interns who come to our campus with open minds, willing attitudes, and readiness to lend a hand to UND's students. The interns will have their own offices at UCC and will be immersed in the full range of university counseling center activities (e.g. individual and group counseling, crisis intervention, outreach, consultation, administration, A&D counseling, etc.) A criminal record background check or a criminal history records check is required for interns entering employment at UNDPIC. The policy can be reviewed at <http://www.humanresources.und.edu/docs/CriminalHistoryBackgroundCheckPolicy.pdf>

Program Description

The Ohio Psychology Internship is a consortium of training sites each following a community based practitioner model. Interns are trained at community based sites in Northeastern Ohio. Each supervisor is a licensed psychologist and is credentialed by the Ohio Psychology Internship. Applicants choose between 3 tracks based on their primary areas of interest for training. The 3 tracks are: 1) Track A - Heartland Behavioral Health (psychiatric hospital)-interns who choose the Heartland track will work 40 hours a week with an inpatient population, including forensic inpatients. Interns are active members of the multidisciplinary team. Activities include assessment, process and educational group treatment, consultation and individual treatment. 2) Track B - Summit Psychological Associates (Large Private Agency) and Coleman Professional Services (Adult/Child Community Mental Health)- Interns choosing track B work 20 hours weekly at Summit Psychological and at Coleman. Interns work with adult/child and adolescent clients with a wide range of diagnoses in individual, group and assessment modalities. Interns work with MRDD population and are exposed to forensic services including Domestic Violence, drug and alcohol treatment. 3) Outpatient Forensic Services - interns work in a large outpatient forensic agency where they conduct individual and group therapy with domestic violence clients, sex offenders, solicitors, and drug and alcohol clients. Interns get exposure to mental health and drug court as well as participate in forensic evaluations and jail visits. Interns gain significant experience in forensic assessments. At least two interns are placed in each track and all 7 interns meet as a group for didactic training seminars. Interns gain exposure to all internship tracks through didactic seminars including DBT, child, forensic, gerontology, multicultural, supervision, ethics and others. Interns can be on the Diversity Committee or can be Chief Intern.

Program Description

The Counseling Center (CC) is a full-service counseling center which provides personal, career, and educational counseling, remedial psychotherapy, psychological assessment, crisis intervention, outreach, and consultation to a diverse university community. In addition to the pre-doctoral internship program, practicum training is provided to doctoral students from UA's APA-accredited doctoral program in Counseling Psychology. A wide variety of training opportunities are embedded in the internship's Practitioner/Scholar model of training. Interns participate in all of the above mentioned activities, including the individual supervision of doctoral practicum students. Each week, interns spend 6-8 hours receiving their own supervision and training and carry caseloads of 12-15 clients. Interns participate in a research group and are encouraged to work on their dissertations. Past intern groups have also collaborated on research projects resulting in conference presentations and publication. Although interns are expected to participate in a wide variety of activities, opportunity also exists for an Emphasis in areas of their choice. Past Emphases have included cultural diversity, gender issues, administration, training, and learning disability evaluation. The CC is known for its commitment to diversity, broadly defined. Staff members are highly invested in training and interns are integrated with the staff in a collegial manner. We are a small cohesive staff and take our work seriously, but we also have a lot of fun together. Please visit our website for information about each of our staff psychologists, our Center, the University of Akron, and living in Northeast Ohio - a region offering city life, recreation in well developed park systems, interesting rural areas, and over 3,000,000 residents.

Program Description

At Ohio University's Counseling and Psychological Services, interns engage in structured training and professional practice designed to provide a sequence of increasingly complex professional experiences, roles, and responsibilities. To accomplish this, we use a Developmental Mentorship training philosophy. Our program is designed to build upon previously acquired skills and knowledge, fostering the competencies for delivering professional psychological services. We provide graduated learning opportunities with increased responsibility as the year progresses, and focus on the developmental process and transitions of interns as they move from student/learner in the classroom, to learner/practitioner in the field, to entry-level professional psychologist. The basic components of our training program are 1), a strong emphasis on the growth process of the interns throughout their experience of socialization into the field of professional psychology, and 2) the amount and quality of supervision and mentoring the intern receives from experienced clinicians. There are a number of core training experiences, including individual and group psychotherapy, crisis intervention, mental health consultation, outreach and organizational consultation, supervision of practicum students, and clinical assessment. In addition, each intern chooses several apprenticeship opportunities in areas such as substance use assessment and treatment, eating disorders treatment, or training. These apprenticeships give the intern a chance to work more closely with an experienced clinician in an area of interest to that intern. Prospective applicants can read about our program in detail at www.ohio.edu/counseling/training.cfm

The BGSU Counseling Center Internship prepares interns as strong generalists in the practice of psychology. The training is agency-based with opportunities to gain experience in counseling center functions such as individual, couples, and group counseling/psychotherapy; consultation; outreach; supervision and training; and crisis intervention. The six areas of focus for training include clinical services, clinical supervision, outreach and consultation, multicultural competence, ethics and law, and professional identity. Interns may choose to informally specialize in topic-oriented areas such as diversity, eating disorders, or group. We adhere to a practitioner-scholar model. We believe that professionals in training learn best by practicing their skills in an environment that is both supportive and challenging. Internship activities have been developed to complement the training philosophy and developmental needs of advanced doctoral students as they transition to professionals in the field of psychology. As an intern progresses through the year, training and supervision experiences provide more opportunities for independence based upon individual needs and abilities. The BGSU Counseling Center staff is highly invested in training and the professional development of interns. We aspire to maintain an atmosphere of collegiality. We view the internship experience as a mutually growth-enhancing process for all staff. This will be our ninth class of interns. The Counseling Center staff respect cultural, individual, and role differences. Our goal is to create an affirming climate for individuals of all races, ethnicities, national origins, genders, gender identities, sexual orientations, religions, ages, abilities, sizes, socioeconomic statuses, languages, and cultures.

Program Description

The Pre-Doctoral Internship in Professional Psychology at Guidestone (transforming from Berea Children's Home and Family Service) is an APA accredited program. Our program is designed to facilitate the professional growth of pre-doctoral interns who are in the process of becoming practicing psychologists. Founded in 1864, Guidestone has a tradition of improving the lives and opportunities of children, families, and adults by providing an integrated system of effective behavioral health and family support services. The goals of the internship year include assisting the intern to become more skilled in the breadth and techniques of assessment and intervention with children, adolescents, and families. The educational and training model of the Guidestone Internship Program grows out of the Local Clinical-Scientist Model. Consistent with this model of training, the scientific approach is applied to all clinical practice endeavors through a process of learning, doing, and reflecting. Interns are exposed to research-based empirical and theoretical knowledge in the field, they are given a wide variety of experiences in service delivery, and they are asked to engage in ongoing analysis, reflection, and dialogue on the nature of this experience. The Internship Program's model of training is experiential, based on the belief that professional competency is developed through hands-on direct service contact with clients and subsequent in-depth analysis of that contact. We offer a diverse range of training opportunities including school based mental health, outpatient counseling, early childhood mental health, group counseling, and psychological assessment. We also offer opportunities to engage in scholarly inquiry and clinical training. For more information about the internship program, please download our Internship Manual from www.guidestoneohio.org.

Program Description

The purpose of the Psychology Internship Program is to provide the intern with specialized training in the provision of services to children, adolescents and families in an applied setting. The internship is an organized program that endorses the scholar-practitioner philosophy. It is community-based and systemic in nature. The Internship faculty has developed a strong, diversified, evidence-based training program that consistently informs the interns that science and practice are interlocking skills that form the foundation of psychological knowledge and application. Thus, the Internship provides training in psychological assessment and clinical interventions that are evidence-based and incorporate issues of human diversity throughout the curriculum. As such, an intensive integration of theory and practice is stressed throughout the year. The process of critical thinking, hypothesis testing and other elements of the scientific method are engendered and integrated into all experiential activities throughout the training process. Interns will be expected to have a strong interest in, as well as display a strong commitment to, developing a level of expertise in working with children and families in the community.

Program Description

<emsp>The primary goal of the Psychology Internship program is to expand upon academic graduate studies with the knowledge and skills of evidence-based clinical practice as a psychologist. Our goal is to prepare Interns for entry level or postdoctoral positions in the field of professional psychology with particular emphasis on practice, as it relates to both the public and private sector, rural medical and mental health settings. To this end, we emphasize the development of intermediate to advanced skills in the core competencies of professional psychology, in addition to facilitating further development of relative expertise in an area of emphasis (e.g., PTSD, Neuropsychology, Serious Mental Illness).</emsp>
<emsp>The Psychology Internship has a focus on rural psychology with an Appalachian Veteran population. Interns are expected to become knowledgeable of the specific challenges and health disparities to which Ohio Appalachian Veterans are vulnerable. Additionally, Interns are expected to develop behavioral competency for culturally-sensitive delivery of services to rural Appalachian Veterans.</emsp>
<emsp>Our training program's philosophy for the education and training of pre-doctoral psychology Interns is best characterized as a clinician-scholar model. Students are taught to use science in the service of clinical practice. This is a process that guides all decisions regarding training objectives. The psychology staff views the development of knowledge and skills related to evidence-based treatments as critical to competence in professional strengths, and services needed. Interns have a therapy and assessment caseload. Detailed psychological reports are provided to Social Services and Juvenile Dependency Court. The process is rapid, requires solid clinical assessment skills, good writing skills, time management, and the ability to multitask. Clinic 2: The Transition Age Youth (TAY) Avanza Program provides individual, family, group therapy, and psychological assessment along with intensive case management for youth aged 16-25. The population served presents with a variety of clinical issues ranging from adjustment, mood, and anxiety disorders to more severe and chronic mental health conditions including Bi-polar disorder and Schizophrenia. Interns will help the Avanza team provide these clinical services. Youth are taken out for social outings, which may require some evening or Saturday hours.</emsp>

Program Description

The mission of the O'Grady Residency in Psychology Program is to prepare future leaders in psychology through excellent training in evidence-based clinical care, research and advocacy. We are committed to providing the highest quality of supervision and training, fostering the development of candidates from a diversity of backgrounds, and, serving the needs of children, adolescents, and families. The program is committed to a scientist-practitioner model of training where clinical practice is informed by evidence (research) and research is generated by the desire to improve the care of children and families. Training emphasizes developmental, interdisciplinary, and family-centered approaches and a scientific basis for psychological assessment and treatment. To access details about our program, please visit the website. Interns concentrate their clinical training through participation in one of two tracks: Behavioral Medicine or Child Clinical Psychology. Residents in the Behavioral Medicine track gain experience with children/adolescents with sleep disorders, chronic pain, gastrointestinal disorders, epilepsy, adherence problems, developmental delays, cranio-facial anomalies, medical complications, and adjustment disorders. Residents in the Child Clinical Track gain experience primarily with children/adolescents with ADHD. Additional experiences include working with children with developmental delays, autism, trauma backgrounds, sleep disorders, and anxiety and depression. In addition, all residents participate in an applied research experience focusing on evidence-based assessment and intervention. Some examples include: community-based program evaluation, child behavior and nutrition (Cystic Fibrosis, Sickle Cell Disease, Obesity, and JRA), adherence, and long-term sequelae of childhood sexual abuse.

Program Description

Our predoctoral clinical internship program adheres to a scientist practitioner model of training. We emphasize the acquisition of basic diagnostic and therapy skills and the integration of these skills with psychological theory and research. Interns are offered a variety of opportunities to learn more specific, evidence-based treatments within their rotations. The internship year is structured to maximize exposure to a wide range of experiences, while offering sufficient concentration to provide depth of learning and to build expertise in particular areas. As such, we strive to balance the needs for generalist training with opportunities to focus on areas of specialization. Our goal is twofold: to support our interns' particular career interests while providing a well-rounded clinical training experience. Consistent with the APA guidelines on Accreditation, we strive to provide internship education and training in preparation for entry-level practice in professional psychology that is broad and professional in its orientation rather than narrow and technical. Interns are assigned to 2 major rotations (24 hours/week for 6 months each), 1 year-long minor rotation (8 hours/week), and 3 long-term psychotherapy cases. Typically, each of these experiences will be supervised by a different staff psychologist. There are also 2-3 training seminars/week. There are 3 tracks: General clinical, Neuropsychology, and Trauma Recovery Center. Applicants are asked to indicate their preferences for track(s) and major rotations in a list at the top of the cover letter submitted as part of the application packet. Applicants who are matched on either the Neuropsychology track or Trauma Recovery Center track are guaranteed a 6 month rotation in that area.

Program Description

The internship at Talbert House follows a practitioner-scholar model with a primary goal of training highly competent generalists capable of providing a range of evidence-based psychological services to a clinically challenging and diverse client population. The interns primary clinical rotation (24 hours per week) is in an outpatient community mental health setting. Interns maintain a caseload of 16-18 clients per week, collaborate with clinical staff, and attend clinical team meetings. Minor rotations (8 hours per week) are available in other agency service sectors such as residential, community corrections, administration, and school-based settings. The range of rotations ensures interns will experience a variety of client clinical presentations such as adult, adolescent, and children mental health programs, psychological assessment services, and chemical dependency programs. Further, interns will fully be immersed in the unique needs of public behavioral health clients, as they are often concurrently involved in multiple programs including mental health, community corrections, and chemical dependency. Interns will be trained and supervised in evidence-based models of treatment including CBT, Motivational Interviewing, and Corrective Thinking. Interns receive two hours of individual supervision per week. In addition, interns receive an average of four hours per week of training in group supervision, peer supervision, advanced clinical trainings, and didactic seminars. Interns are expected to conduct a clinical training in their area of expertise for agency staff. It is expected that upon completion of the 12 month, 2000 hour pre-doctoral internship, the intern will have developed the competencies, skills, and professionalism that are required for successful practice in public behavioral health. We welcome interns who would like to stay with us to gather post-doctoral hours and experience, depending on intern interests and agency need.

Program Description

The predoctoral internship at Applewood Centers includes outpatient experience in our urban, community mental health center for children and adolescents and approximately 12 psychological assessments. Opportunities to conduct psychological evaluations in a satellite office or residential treatment are available. Theoretical orientations and training include behavioral, CBT, parent-training, family systems, psychodynamic, and integrative. Interns participate in weekly didactic seminars and treatment team meetings. Seminar topics cover a wide range of topics including cultural competence, evidence-based treatments for a variety of diagnoses, family therapy, clinical supervision, ethics and a variety of mental health disorders. We have weekly individual and group supervision. We welcome interns to stay with us to gather postdoctoral hours and experience (depending on postdoctoral interest and agency need and funding).

Valerie Gortmaker, Ph.D. is the Director of Outpatient Services and Internship Training. Dr. Gortmaker earned her doctorate degree at the University of Nebraska-Lincoln. She completed her APA-Accredited internship and post-doctoral fellowship in pediatric psychology at the Munroe-Meyer Institute at the University of Nebraska Medical Center. She has clinical experience in community mental health, behavioral pediatric, and private practice settings, as well as experience as a school psychologist. Dr. Gortmaker's research interests include linking assessment to treatment for children, adolescents, and families. Clinically, she uses parent-training techniques, behavior therapy, CBT, and evidence based practices to treat children. Dr. Gortmaker enjoys treating ADHD, depression, anxiety, elimination disorders, learning disabilities, mental retardation, autism, obesity, disruptive behavior disorders, and selective mutism. Elizabeth Frantz, Psy.D. is the Outpatient Supervisor at Applewood Centers. Dr. Frantz is a clinical neuropsychologist with a specialty interest in treatment of children and adolescents. She earned both her master's and doctoral degrees at Widener University in Chester, Pennsylvania, and her bachelor's degree at the University of Notre Dame. She completed her APA-Accredited pre-doctoral internship at Widener University with rotations at Clinical Neuropsychology Associates and Central Montgomery Mental Health Mental Retardation. She earned her post-doctoral fellowship at Alfred DuPont Hospital for Children in Wilmington, Delaware, in the Division of Rehabilitation Medicine. She also interned at Clinical Neuropsychology Associates in Philadelphia and a community mental health agency in the Philadelphia area, where she worked with both children and adults. Additional experience includes clinical psychologist and neuropsychologist positions in private practice, where she provided individual psychotherapy and neuropsychological assessments.

Program Description

Interns pursue a Track (Mental Health, Health Psychology, Neuropsychology, Geropsychology) through three four-month rotations and an optional 300-hour enrichment if desired. We are a large facility with medical and psychiatric in- and outpatients. We encourage ethnic minority applicants. APPLICANTS MUST SPECIFY THE ONE [AND ONLY ONE] TRACK TO WHICH THEY ARE APPLYING AND THREE SPECIFIC PREFERRED ROTATIONS IN THEIR COVER LETTER. We are interested in the career trajectories of students, including preparation for postdoctoral specialization and the future implications of training assignments made during the internship year.

Program Description

The Doctoral Internship Training Program in Professional Psychology of the Cleveland State University Counseling Center has three goals: (1) Prepare interns to function independently as clinical service providers; (2) Enhance interns' knowledge and awareness of multicultural and diversity issues in the provision of psychological services; and (3) Facilitate interns' movement toward a consolidated sense of professional identity as psychologists. We emphasize interns' development of multicultural awareness and respect for diversity. Cleveland State University has a diverse population and we are able to expose trainees to a variety of multicultural and other diverse training experiences. This counseling center has the advantage of being part of an urban university with a variety of traditional and non-traditional students. Our clients come from a variety of backgrounds and present with a wide range of issues. Therefore, we acquaint trainees with a variety of therapeutic modalities. We provide intern seminar training in 4 key areas: Diversity; Mind-Body-Spirit; Couples, Families and Groups; and Professional and Treatment Issues. We also believe in exposing trainees to multi-system interventions such as those which take place at the community, institutional, and family levels. Toward this end, interns engage in a wide variety of outreach activities. Overall, we endeavor to offer a training program that is flexible and open to differences. We value creative thinking and also recognize that each trainee has unique developmental needs. We seek to provide an environment which nurtures our interns as they develop their professional skills and identities. Approximately half of our interns go on to post-docs or positions at university counseling centers. The Cleveland State University campus is located between downtown Cleveland (featuring big city architecture, entertainment and a casino) and University Circle (center to several world-class museums and the Cleveland Orchestra). Outlying areas include the Cleveland Metroparks, the Cuyahoga Valley National Park and Cedar Point amusement park. Please visit our website for more comprehensive information about our Training Program, our Center, and Cleveland State University.

Program Description

Daily Behavioral Health is a Christian pediatric psychology practice that offers a 12 month, 40-hour per week, predoctoral internship program specializing in pediatric, clinical, and school psychology. Interns will receive training in evaluation and treatment of children with pervasive developmental disorders, disruptive behavior disorders, and other special needs. The internship starts July 1st and will employ two interns. Interns are expected to complete 2000 hours of the internship program. After successful completion of the program, interns will receive a certificate of completion in clinical child psychology. The goal of the predoctoral internship program at Daily Behavioral Health is for interns to be prepared for the practice of professional psychology by demonstrating competency in four major areas: assessment, treatment, consultation, and professional development. Objectives include the following: Objective 1: Intern will gain experience and competency in comprehensive assessment (e.g., Autism, ADHD, Social-Emotional, Learning Disabilities). Objective 2: Intern will gain experience and competency in research-based treatment (e.g., Behavioral and Cognitive-Behavioral Treatment, Family Therapy, and Group Therapy). Objective 3: Intern will gain experience and competency in school and physician consultation. Objective 4: Intern will gain experience and competency in ethics, diversity issues, and other professional topics. Objective 5: Intern will gain optional experience in research and teaching. All training experiences will be provided in the same outpatient setting, although interns will be exposed to school and hospital settings as a result of school and physician consultation. Interns will receive 2 hours of didactic courses a week, three to four hours of supervision (with a minimum of two hours one-on-one), and four hours of protected research time to complete their dissertation or other research projects.

NOT UPDATED RECENTLY UCS offers two, one-year, full-time pre-doctoral psychology internship positions. Interns devote a minimum of 16 hours per week to clinical activities and receive individual, assessment, and group supervision with licensed psychologists. Interns will receive didactic training by senior clinical staff and participate in weekly case conferences. Interns work within an interdisciplinary context, collaborating with social work staff and students, psychiatry staff and residents, and other professions afforded by this site. Interns have the opportunity to individualize their training by working on one specialized interest area and in providing psycho-educational programming in behavioral health and wellness. One of the unique opportunities afforded to our interns is the rigorous assessment training that they will receive. The UCS offers comprehensive psychological and cognitive assessments to undergraduate and graduate/professional students. These comprehensive assessments typically include personality/emotional functioning, general intellectual capacity (IQ), attention, executive functioning, memory, visuospatial perception abilities, reading, written expression, and/or mathematical skills. Interns devote a minimum of 16 hours per week engaging in direct clinical services, with a minimum of 12 hours per week to providing psychotherapy services to individual clients and couples. Interns co-lead one group per semester. Groups are either process-oriented, support, psycho-educational, and/or theme-oriented. Interns may have the opportunity to design and implement a group of their choice, based on their experience and interest. Intake Assessment: Interns are responsible for providing at least one initial intake appointment per week. These appointments are scheduled ahead of time. Interns are responsible for providing at least one block of time per week towards urgent care and crisis care. These may be scheduled same-day, or they may be walk-in visits.

Program Description

There are four specialty tracks.

Pediatric Track - 3 slots - Spend the majority of time on inpatient consultation-liaison service working with a wide array of medical services, including (but not limited to) the Burn Unit, Hematology/Oncology, Rehabilitation, Pulmonology, Endocrinology, NICU/PICU, Neurology, and Gastroenterology. Follow inpatient consultations as outpatients. Carry a caseload of outpatient assessment and treatment cases. May complete specialized training in neuropsychological assessment, depending on past training and experience.

Clinical Child Track - 3 slots - Structured around a primary placement in an interdisciplinary community mental health center with a minor rotation in pediatric psychology. Assessment is a significant component. Maintain an active therapy caseload with a wide range of diagnoses and ages. Provide case-centered consultation to local schools. Pediatric psychology rotation in outpatient medical specialty clinics.

Intellectual & Developmental Disabilities Track - 3 slots - Structured around a primary placement in an interdisciplinary developmental assessment clinic. Member of an interdisciplinary team evaluating children suspected of developmental delay. Ample treatment experiences covering a wide range of presenting problems for children with developmental disabilities. Consult to medical clinics, inpatient medical services, ICF/MR and schools.

Neuropsychology Track - 1 slot - 50 to 60% of time completing outpatient neuropsychological and early developmental evaluations. Carry a caseload of outpatient treatment cases referred from a wide range of hospital medical services. Exposure to inpatient consultation. Opportunities for inpatient practice. The internship program also includes a neuropsychology component which involves both didactics and a year-long training portion.

The internship program at SGHC is committed to maintaining and enhancing diversity in ideas, orientation, culture, ethnicity and experiences; we encourage and solicit applications from all localities, schools, and minorities who might qualify. SGHC, as an agency of Maryland's Department Health and Mental Hygiene, prohibits discrimination on basis of race, color, sex, national origin, religion or belief, marital status, sexual orientation, genetic testing, political affiliation and mental and/or physical disability in the operation and administration of its services, facilities, programs, benefits, and employment opportunities. The program does not discriminate on the basis of any factor that is irrelevant to the successful completion of internship training. All qualified applicants from qualified programs are considered. FYI: Office of Program Consultation and Accreditation, (202) 336-5979.

Program Description

Mid-Ohio Psychological Services, Inc. is a community mental health center located in central Ohio that offers outpatient services to underserved populations. It is the agency's vision to be a socially responsive agency striving to develop a comprehensive program based on the needs to the community where all persons experiencing substance abuse and mental health issues may achieve their full potential. The center employs approximately 50 clinical staff 6 of which are licensed Psychologists, who provide a variety of services to the community including individual, couples, family, and group therapies, home based therapy, psychiatry, case management, and formal evaluations. The psychology interns are expected to have an average of 17 clinical contacts a week over the course of the internship year. In addition, the interns will conduct a variety of psychological evaluations throughout the year. Supervision, case conferences, and didactic trainings are all used to supplement the practical experiences to allow for an integration of concepts to aid in treatment planning, interventions, and case conceptualization. For more information regarding the specific goals of the internship, please contact the agency. (Assessment). The Social Learning rotation is required. Available rotations include Neuropsychology, Forensic Assessment, Sexual Treatment & Evaluation Program, Locked Adolescent Unit, Advance Cognitive Behavioral Unit, and the Community Reintegration Unit.

Program Description

WSU-SOPP provides interns with a dynamic mix of opportunities in clinical service, applied research, administration, consultation & teaching. WSU-SOPP offers competency-based training in diverse areas of clinical practice with an emphasis on multicultural diversity and competence. Interns who will add to our diversity and share a commitment to multicultural applications of clinical psychology are especially welcomed. Clinical & didactic teaching as a means of broadening professional competencies are program requirement. WSU-SOPP balances generalist training with focused specialty opportunities, with the intern assigned both an internal & external rotation. External rotations include pediatric health psychology(Children's Medical Center),inpatient chronic psychiatric/forensic care(Summit Behavioral Healthcare), brief clinic/community mental health (South Community Behavioral Healthcare), & out/inpatient acute child/adult mental health (Upper Valley Medical Center). Internal rotations include student counseling & campus life consultation (Counseling & Wellness Services) & community-based psychotherapy/assessment with subspecialty opportunities(General Practice Clinic).Interns may further pursue specialty areas through the Special Project requirement. An extensive Didactic series, includes topics in multicultural clinical issues, professional ethics, empirically-supported treatments & supervision/ consultation, rounds out the experience. Interns engage in weekly Case Conference & quarterly Clinical Grand Rounds. The program is dedicated to extensive supervision, including reviews of audio/videotaped sessions. Multiple supervisory models/methods are employed with multidisciplinary exposure & clinical exchange with psychologists who are not primary supervisors. Supervisor theoretical orientations vary.

Miami University is a midsize campus in a beautiful, rural setting in Ohio. Our program has a Developmental Mentorship Practitioner Model. Staff of 7 full time psychologists and one full time psychiatrist hold varied theoretical orientations, working from integrationist perspectives, in dealing with a full range of issues from a traditional undergraduate and graduate student population. Theoretical orientations include feminist, multicultural, dynamic, interpersonal, gestalt, CBT, and humanistic approaches. Clinical issues addressed include mood disorders (esp. anxiety, depression), relationship/family concerns, broad range of multicultural related concerns and support, sexual orientation and gender identity issues, eating disorders and body image, trauma recovery, women's and men's issues, personality disorders, career indecision, substance abuse assessments, and attention problem evaluations. Interns are involved in a wide range of activities, including individual and group therapy (some couples therapy), parent/family consultations, career counseling, crisis work, ongoing liaison relationships, consultation and outreach, supervision of masters' level trainees, assessment seminar, and possibility of teaching. Training foci include: multicultural/diversity issues, gender issues, rape and sexual assault, eating disorders, alcohol and substance abuse, along with many other possibilities. One intern position is specifically focused on working with international students, especially Asian international students. For many more details about our setting, staff, and trainees, please visit our extensive website.

Program Description

Wright-Patterson Medical Center offers broad-based training in a collegial environment. We prepare military psychologists to advance the Air Force mission by caring for the mental health needs of our service members, their family members and our retired population and by providing expert consultation to our military leadership and our medical colleagues. Since our graduates begin their careers with a high degree of responsibility as officers within the AF, we focus on helping them to function competently and comfortably as autonomous professionals at AF bases throughout the United States and overseas. Our program focuses on generalist training. The curriculum integrates the science and practice of psychology with the unique needs of patients of diverse backgrounds. Training objectives center on competence in using evidence-based psychological assessment and treatments, consultation, professionalism and ethical practice, and use of psychological services to support and enhance military preparedness. Required core rotations in the Outpatient mental health, Clinical Health Psychology, Neuropsychology, Primary Care clinics and the Alcohol and Drug Abuse Prevention and Treatment program. Mini rotations in deployment psychology, crisis assessment and intervention and Family Advocacy. Dissertation time is provided up to 4 hrs/week. Other experiences in Leader ship and Administration, Community Outreach. Special interest mini-rotations available. 2-3 hrs/week of individual supervision augmented by a robust program of didactics, case conferences, group supervision, journal clubs and workshops by nationally recognized experts. Our program is enhanced by ongoing interdisciplinary clinical and educational collaboration with our Psychiatry and Social Work residents.

Program Description

During the course of the internship year students complete one 12-month rotation through their funding site and two, secondary 6-month rotations at other sites associated with the Consortium. Primary funding agencies include: University Counseling Centers (5 positions, 4 at main campus center and 1 at Health Sciences Center campus); University Athletics Department (1 position) and Behavioral Health Rotation (1 position) and a new Behavioral Health Prevention/Outreach Rotation (1 position). Secondary placements include any of the above primary placements Each intern develops an individual training plan (ITP) at the beginning of their training year, in collaboration with their primary and secondary site supervisors, in order to tailor the Consortium's training experiences to the their individual needs. During the course of the internship year the Consortium faculty work very hard to make sure each student gets a well-rounded, yet personalized training experience.

Program Description

We believe the internship should be devoted primarily to clinical activities, however, science provides the backbone for much of our clinical practice. The core of the intern's training is in the clinical activities on the various rotations and each intern will be active in a wide range of clinical activities. Our program is a General Internship, and as such, interns gain experience working with both adults and children. Interns have experiences in psychotherapy and assessment with both children and adults. Our major goal is to prepare students for the practice of professional psychology, particularly clinical and counseling psychology. Other goals include learning high standards with ethical practice and sensitivity to cultural and individual difference. Choices an intern makes allow for specialized training in either pediatric and clinical child psychology, clinical neuropsychology or health psychology while maintaining a general internship philosophy. We have 15 possible rotation choices, 48 full time and 1 part time faculty & 8 interns. We have 3 major rotations of 4 months duration, each of which involves 25 hours of clinical work each week and 3 minor rotations which involve 15 hours of clinical activity. We have 4 seminars which meet each week. Interns receive a minimum of 3 hours of individual supervision plus at least 1.5 hours of group supervision. Our program is devoted to educating interns, and faculty value their teaching and supervision activities. We are a consortium which has 2 cooperating hospitals comprising the OU Medical Center, both located close to each other. The hospitals include OU Medical Center and VA Hospital.

Designate the consortium site to which you are applying in your online cover letter and include a deidentified psychological report in the supplemental material of the online AAPI

Program Description

NOPIP is an APA accredited consortium comprised of the Oklahoma Forensic Center, Indian Health Care Resource Center, Tulsa Center for Child Psychology, Laureate Psychiatric Hospital, and the University of Tulsa Counseling Center. Eight positions are available within the consortium, including: Position 1: a primary rotation at Laureate Crisis Stabilization Unit (24 hours) and a secondary rotation at the University of Tulsa (12 hours), plus 4 hours of training/supervision weekly. Positions 2 & 3: a primary placement at the Oklahoma Forensic Center (36 hours), plus 4 hours of training/supervision weekly. Positions 4, 5, & 6: a primary placement at Indian Health Care Resource Center (36 hours), plus 4 hours of training/supervision weekly. Positions 7 & 8: a primary placement at Tulsa Center for Child Psychology (36 hours), plus 4 hours of training/supervision weekly. Interns remain at selected placements for the full year. Weekly training seminars and both individual and group supervision are provided. The variety of potential placement sites and strong emphasis on training and professional development provide a rich experience for NOPIP interns. The primary mission of NOPIP is to provide quality clinical training utilizing a diverse range of theoretical models and techniques. The scholar/practitioner model is the underlying philosophy of NOPIP. The program's training model is based on the idea that interns differ in both prior experience and professional goals. Both required activities and individualized training are utilized in order to achieve basic competencies and to allow for the pursuit of specific goals. As a graduate of NOPIP, each intern is expected to have developed at least an intermediate level of skill in the areas of therapy, psychological assessment, professional behavior, consultation, evaluation, and supervision.

NOPIP AAPI application requirements include: (A) minimum of 500 hours in Total Intervention & Assessment/Total Supervision Hours, (B) minimum of 3 semesters of practicum experience, including at least 1 practicum with an adult population, (C) minimum of 1 integrated written report

Program Description

Linn County Mental Health is a full service community mental health provider. Interns participate in one primary rotation (Adult Outpatient or Adult Community Support Services or Child and Family Outpatient) and spend one day a week with the crisis team. Interns are trained as Certified Mental Health Investigators and testify in court on at least one case. Crisis rotation includes walk-in and telephone screening as well as psychiatric risk assessment and screening for psychiatric inpatient services at 3 local emergency departments.

Program Description

This 2000 hour internship program mentors interns in developing their skills and identity as professional psychologists. The program combines 1) direct service such as clinical work, outreach, and consultation, with 2) intensive supervision, and 3) didactic/experiential learning such as seminars and in-services. Our training model is developmentally based where experiences initially include more support and direction from permanent staff but move toward increased independence. Our multi-disciplinary staff offers a variety of theoretical approaches but highlights personal strengths, mindfulness, relationship building, and process of psychotherapy. Interns are valued as important and contributing members of the CAPS team, and we view the interaction between our system and individual trainees as an important source of learning. One goal is to facilitate a process of integrating the personal self with the professional self. This includes factors such as knowing one's strengths and weaknesses, maintaining an awareness of one's impact on clients and colleagues, managing stress levels, setting realistic professional goals, and striving toward a healthy balance in one's life. Finally, we promote psychologists as being integrated members of the agencies and communities in which they serve, work, and live. Here at OSU, we work hard to ensure that CAPS is an active and visible presence on campus, and work collaboratively with other departments. Interns will have opportunities to work and interact with staff, faculty, and students across the campus community.

Program Description

The internship program at the University of Oregon Counseling and Testing Center subscribes to a practitioner-scholar model; emphasizing mutuality of practice and science, developmental learning, mentoring, multiculturalism, and integration of personal and professional identities. The primary goal of our internship program is to prepare interns for counseling center work. The internship program integrates developing conceptual knowledge, applied skills, and competence in individual psychotherapy, diagnostic skills (w/ objective testing for ongoing clients), group psychotherapy, crisis intervention, clinical supervision, consultation, and outreach programming. The training emphasis includes a focus on multiculturalism, process oriented training, clinical skills, and professional identity. The UCTC senior clinical staff work from a variety of theoretical orientations including multicultural, feminist, interpersonal, humanistic, gestalt/psychodrama, DBT, cognitive-behavioral, Adlerian and Jungian. Multicultural theory is interwoven into all of these orientations. The staff also integrates our commitment to multicultural organizational development in our practice, values, interests, and personal identities. Personal and professional integration often involves examining personal characteristics and issues that are relevant to professional effectiveness and success. In keeping with APA Ethical Standard 7.04 (Student Disclosure of Personal Information) as contained in the Revised Ethical Principles of Psychologists and Code of Conduct (APA, 2002), it is important that interns know that self-disclosure will be part of the supervisory and training experience during the pre-doctoral internship. Training staff will assist the intern to explore and understand the characteristics and dynamics they bring to interpersonal and professional situations and how these characteristics and dynamics facilitate or hinder effective professional interactions and interventions.

Program Description

Morrison is a child and family community mental health agency, focusing on the treatment of youth 0-21 years of age and their families. Interns receive core training in outpatient treatment and assessment, with weekly seminars and group supervision. More extensive training is provided in the Incredible Years curriculum. Theoretical orientations and trainings include behavioral, CBT, attachment, parent-training, family systems, multicultural, and integrative. Under the auspices of two, year long supervisors, interns will see a range of child, adolescent, and family clients for individual, family, and group therapy. Many cases involve consultation and coordination with community systems (35% foster children) along with trauma, so this is emphasized in training. Interns will also spend one day per week treating mental health issues within an elementary school. All interns provide a minimum of 7 comprehensive assessment

Program Description

CYFS was established in 1970 to initially provide residential services to youth and now also encompasses a Community Mental Health Clinic, Chehalem Counseling Center (CCC), in addition to several other community based programs. We have four residential homes for male and female adolescents in need of a higher level of supervision and structure than can be provided in a family setting. Clients in three of our residential homes are referred to our program through the Department of Human Services. Their intellectual functioning is typically in the Borderline range. They frequently have severe trauma histories and significant emotional and behavioral difficulties. The clients in our fourth residential home have developmental disabilities and comorbid behavioral and/or emotional difficulties. Interns provide mental health services for these clients, including individual, group, and family therapy. Interns provide mental health consultation and support to the direct care staff. CYFS also has an outpatient counseling center (CCC) serving a wide range of clients, including those without medical insurance or who are unable to access their insurance benefits due to high out of pocket costs. CYFS/CCC offers treatment for children, adolescents, and adults in group, individual, family, and couples therapy. CYFS/CCC is also providing outpatient psychological assessment services. Interns are expected to participate in the functioning of the organization. This may include involvement in community outreach presentations, research, or program development. Interns also provide outreach parenting groups as an additional training opportunity. Interns share the responsibility of providing supervision to practicum level students from local doctoral programs. If an intern has a specific area of interest, the organization will make every effort to provide appropriate opportunities for professional development. CYFS values interns who are prepared to work hard at our multifaceted work site and who demonstrate flexibility. CYFS does not discriminate on the basis of age, gender race, religion, or sexual orientation.

Program Description

The GDCP predoctoral internship program provides training for assessing and treating a wide range of psychological problems, including mood and anxiety disorders, co-occurring disorders, trauma, eating disorders and other behavioral health conditions. Training Available Interns receive training at the George Fox Behavioral Health Clinic (BHC) located in Newberg, Oregon, as well as medical clinics, operated by Providence Medical Group, located in Portland, Oregon. The goal of the internship is to equip interns to be generalist clinicians with competence in behavioral health integration, which will be developed during the interns' major training rotations in primary care psychology and community mental health. In addition to the primary rotations in healthcare settings and the George Fox BHC, interns also select specific focus areas in teaching, parenting/family issues, assessment, supervision, group therapy, and/or program development. THIS INTERNSHIP IS LISTED AS fPARTIALLY AFFILIATED§ THIS MEANS THAT FOR A PORTION OF THE POSITIONS, STUDENTS FROM THE GEORGE FOX UNIVERSITY GRADUATE PROGRAM ARE GIVEN PRIORITY.

Program Description

Our internship program has been in existence at OHSU since 1967, accredited by APA since 1980. Our aim is to develop excellence in working with youth and their families by fostering skills appropriate to a wide range of clients and contexts, emphasizing melding theory with practice. Emphasis is on practice within a pediatric context. Our graduates understand, communicate effectively with, and interact comfortably and freely with other health service professionals. Three patient populations are emphasized. First, trainees develop expertise in working with people with developmental disabilities that originate in childhood and are expected to continue indefinitely (e.g., autism spectrum disorders, intellectual disability, metabolic disorders, Spina Bifida, Attention Deficit/Hyperactivity Disorder, learning disabilities). Second, trainees gain experience with youth with chronic health conditions (e.g., seizures, diabetes, cancer, chronic pain). Third, interns provide care to patients without traditionally defined disabilities, such as youth with emotional/behavioral challenges. Diverse training occurs because of the intersection between the emphasis of the Oregon Institute on Disability & Development (OIDD), the primary sponsor of the internship, the Oregon Office for Children with Special Health Needs, a Title V program administered through the Child Development and Rehabilitation Center, and Doernbecher Children's Hospital, through which inpatient and outpatient services are provided. Training activities occur primarily on the OHSU campus; some occur in the community. The OIDD's focus is on the total well-being of individuals over the entire life span, though the internship program focuses on child/pediatric populations. Fifteen disciplines are represented in OIDD. All trainees, including psychology interns, participate in the Leadership Education in Neurodevelopmental and Related Disabilities (LEND) training curriculum.

Program Description

The mission of the internship is to prepare interns for entry level professional practice in clinical psychology. Assessment, intervention, interprofessional collaboration, consultation, and supervision are domains in which interns are provided with opportunities to develop more in-depth areas of skill and competency.

Although all interns primarily receive training in individual psychotherapy with adult clients, they may choose to develop additional areas of competency by working with couples or groups. Approximately 30% of interns' workload is spent delivering therapy. Interns receive training and experience in assessment with individuals across the lifespan. Approximately 20% of interns' workload is spent conducting assessment. Interns participate in interprofessional collaboration activities within the College of Health Professions. Currently these opportunities are monthly diabetes clinic, case conferences and interprofessional course. We are developing new collaborations whenever possible. Approximately 10% of interns' workload is spent collaborating interprofessionally. Interns have the opportunity to provide group supervision on their therapy team and supervise individual cases of practicum I students as appropriate. Interns also provide consultation to practicum I students and provide support during evenings and Saturdays when directors are away from the clinic. Approximately 20% of interns' workload is spent providing consultation and supervision. A practitioner-scholar model of understanding and applying the empirical literature in the clinical setting is emphasized during the internship training program. In addition, the internship faculty and interns affirm the principles of ethical and humane practice by honoring diversity and striving to increase interns' self-awareness and sensitivity to cultural and individual differences.

The supervisory philosophy gives interns progressively greater autonomy, beginning with a more directive approach during the first third of the year, using guided questioning to facilitate the supervisees' problem-solving and discovery (e.g., Overholser, 1991) during the middle third, and to a non-directive stance by the final third. This overall approach to supervision draws from the integrated developmental model of supervision described by Stoltenberg and his colleagues (Stoltenberg & Delworth, 1987; Stoltenberg, 1997) which recognizes that supervisees require different types of supervision depending on their developmental level in a particular domain. For example, an intern might be advanced in clinical intervention but be at a more beginning stage of development as an evaluator of cognitively impaired clients—the content and approach to interns' training is therefore modified to fit each domain. These stages may be accelerated as the intern shows progressively greater ability to perform as an entry level clinician.

Pacific University has two training clinics, one in downtown Portland (where the interns will spend approximately 60% of their time) and the other in Hillsboro (where interns will spend approximately 40% of their time). Training seminars include diversity, interprofessional collaboration, marketing/networking, along with professional development and self care. Approximately 20% of interns' workload is spent in their own supervision and training. The Pacific Psychology Clinics of Pacific University's School of Professional Psychology offers a 2000 hour, one-year, full time, predoctoral internship to prepare qualified graduate students for entry level professional practice in clinical psychology. We do not accept part time interns. Our internship starts August 4, 2014 and ends on August 14, 2015. This will allow for an overlap with outgoing interns to provide a thorough orientation process and allow for a warm hand off of clients. This orientation period provides training for the interns' role as mentors, consultants and supervisors of practicum I students. Interns will also begin their role as an active collaborator within an interprofessional framework during the month of August. Our interns get approximately 6 weeks off over the year as well as release time for dissertation, graduation and seeking their next position.

Please only apply if you meet or exceed the required hours of adult therapy and assessment at the time of application.

Program Description

The number one priority in the Portland VA Medical Center's internship program is to give students a positive, supportive training experience. Interns work reasonable hours, are provided ample supervision and didactic opportunities, and are treated as colleagues by the psychology staff. The PVAMC predoctoral internship program assists interns as they prepare for future careers or for additional postdoctoral training. We use a generalist model, focusing on skills of assessment, treatment, consultation, and integrated care with diverse patient populations. Each intern participates in three, 4-month long full-time training rotations. We believe that interns experience greater in-depth learning in a particular specialty area when working full-time in one setting. Rotations we offer include Health Psychology, Outpatient Mental Health, Neuropsychology, Substance Abuse Services, Psychotic Spectrum Disorders, and Posttraumatic Stress Disorder/Clinical Team. Interns now may also have clinical experiences at OHSU, our medical school affiliate. Professional development is a primary focus of our training, as we assist interns in transitioning from graduate school to a professional career.

Program Description

Individual and group psychotherapy and psycho-educational assessment with urban university students of a wide age-range comprise most of an intern's clinical work. Interns are also involved in crisis intervention, outreach and consultation. Professional development is emphasized in weekly seminars, individual supervision, and multiple types of group supervision. Interns are part of an interdisciplinary counseling staff that includes psychologists, psychiatrists, and clinical social workers. Counseling services shares its facility with health services, and interns frequently interact with physicians, nurses, and other medical professionals.

Program Description

WPCS is an outpatient mental health company that serves a variety of populations and mental health diagnoses. Interns have the opportunity to work with adults, adolescents, children couples and groups. It is our objective to expose interns to a wide variety of patient populations. In addition, interns will have the opportunity to work on a multi-disciplinary treatment team. Interns work closely with other professionals in an effort to meet the needs of their clients. Interns will have the opportunity to individualize their training experience. Interns will be expected to actively participate in case conferences, clinical decisions, and will be considered highly respected members of the clinical staff. Multiple supervisory experiences will be provided as well as diverse learning opportunities. The intern who successfully completes the program will be capable of functioning autonomously and responsibly in a variety of professional psychology roles.

Program Description

The University Counseling and Psychological Services (UCPS) offers a full-time comprehensive twelve-month Predoctoral Internship in Professional Psychology for students working toward their doctoral degrees in counseling or clinical psychology. We emphasize the core elements of counseling center work in our program; however the skill set developed is highly transferable to other clinical settings in professional psychology. Two interns are admitted to the internship program per academic year, and the UCPS offers a highly competitive stipend and compensation package. The internship for the 2013-2014 school year will begin on Thursday, August 1st, 2013, and runs for one full calendar year. All interns are introduced to the counseling center and greater university community during an initial orientation period. During orientation, interns also begin to define specific training goals for the internship year and liaisons with various student life services (residential life, center for multicultural activities, international students, campus ministry etc.) The training program subscribes to an apprentice-mentor developmental model in which trainees learn by doing, by reflecting on their work in supervisory consultation with staff, by observing professional activities of staff, and by scholarly inquiry. CAPS operates from an integrationist theoretical perspective in working with clients and in providing learning experiences for trainees. Evidence based practices are emphasized, along with case conceptualization skills rooted in developmental and relational frameworks. Weekly training seminars span a variety of clinical and theoretical topics of particular relevance to working with a young adult population. Interns have their own individual offices equipped with computers and cameras. All individual sessions are video-taped and both group and individual supervision place a strong emphasis on reviewing and learning from taped material.

Program Description

We offer two tracks. Our APPIC Program Code Numbers are: General Internship (3 positions): 152911 Neuropsychology Internship (2 positions): 152912. The internship program uses a Practitioner-Scholar model, to give the intern a broad range of direct assessment and treatment experiences with a variety of patients, using current evaluative and intervention techniques. The 16 staff psychologists typically involved in intern training represent various theoretical orientations assuring a broad range of training experiences. The internship year consists of three 4-month rotations. One rotation must be inpatient, providing core training experiences, while the second and third rotations are chosen from a number of options, enabling the intern to receive specialized training in a selected area or areas. Several of the optional rotations are half-time, allowing the intern to gain experience in two optional areas. The optional rotations include: Post Traumatic Stress Disorder Unit (full time); Biofeedback Clinic (full or half-time); Neuropsychology I (full time); Neuropsychology II (half-time); Substance Abuse /SUD Outpatient (full time); Homeless Domiciliary Care Unit [SMI focus] (full-time); Geropsychology (half-time); Psychosocial Rehabilitation Psychology (half-time); and Health Psychology (half-time). No more than 50% of the total internship may be spent in any one area (1.5 rotations). In addition, all interns participate in skill-building seminars in testing/assessment; therapeutic interventions; ethics and professional development; and supervision skills [using a live, peer-consultation model]. Applicants should have experience in individual and group psychotherapy, and a solid working knowledge of personality testing, with experience in integrated report writing. Sample assessment reports must be submitted with the application (see brochure linked above).
rotation. The Specialty track intern is trained in child/adolescent programs all year. Assessment, consultation, individual and group therapy, and marital/family therapy are part of the program. See program handbook for additional information. Handbook can be viewed at www.philhaven.org.

Program Description

Geisinger Medical Center, a tertiary care teaching hospital, serves a population of more than 2 million in central and northeastern Pennsylvania. In addition to the internship, Geisinger has over 25 medical residencies and fellowships. By focusing on broad training in clinical psychology and behavioral medicine, the internship primarily prepares interns for careers as practitioners in medical or applied practice settings. We adhere to the scientist-practitioner model of psychological practice. Clinical training experiences follow the apprentice model. Interns are supervised by faculty members directly involved in providing clinical services to specific patient groups within the medical center. Interns function with a good deal of autonomy, assuming junior level staff responsibilities. Participants in the program are expected to: Further develop basic clinical skills to begin independent practice; Understand the medical culture; Learn to serve as members of interdisciplinary teams within the medical center; Work with culturally diverse groups; Learn to consult with physicians; Apply clinical research skills in a clinical setting; Uphold high standards of patient care and professional ethics. Interns expand their skills in assessment, psychotherapy, consultation and research. Clinical experiences are of primary importance in the internship with particular emphasis placed on learning behavior change methods for use with medical patients. Faculty frequently use cognitive-behavioral, ACT, and motivational interviewing approaches although other treatment methods with empirical support are encouraged. Interns choose 1 of 2 tracks: 1) adult clinical/behavioral medicine (3 interns) or 2) child clinical/pediatric psychology (4 interns). Contact the program for details. 4 weekly education conferences complement the clinical component of the internship. Research opportunities exist. Postdoc opportunities available for year 2.

Program Description

PSYCHOLOGY INTERNSHIPS-The Department provides training for individuals in a recognized Doctoral Program in Psychology who are seeking to broaden their experiences in the treatment of seriously mentally ill individuals. Candidates for this program should have completed their course work in Psychology and have demonstrated an ability to perform the professional duties of a licensed professional. They will receive guidance and supervision from Doctoral Clinical staff who will instruct them in the day to day operations of treating consumers in a hospital setting. It is expected that these interns will have a broad based knowledge in psychological testing, assessment, individual and group psychotherapy, and psychopathology. Selected candidates will be trained to work with consumers who vary greatly in diagnosis. Some of the population at the hospital will present with a variety of acute symptoms which may be a manifestation of Personality Disorders and Mood Disorders, while other individuals may be readmitted with symptoms of Thought Disorders such as Schizophrenia. There is also a population of sexual offenders who have been committed to the facility by the judicial system. The program also allows for experience in the treatment of co-occurring disorders as well as experience in Dialectical Behavior Therapy.

Program Description

This broad-based training experience is composed of two distinctly different 12-month tracks: Family-Based & Crossroads Drug & Alcohol/Dual Diagnosis/Criminality (Inpatient, Intensive Outpatient). In addition to the chosen track, minor elective rotations consist of various outpatient opportunities (mental health, EAP, D&A, sex-offender groups, etc.) in our satellite offices in South Central Pennsylvania. Duties of the intern will include psychological assessment, psychotherapeutic interventions (individual, group, family), consultation, and case management. Interns will work in multi-disciplinary settings and interact meaningfully with other professionals (social workers, psychologists, psychiatrists, drug and alcohol counselors, teachers, parole officers, etc.). This experience is crucial for the developing psychologist and is designed to inform and prepare the future psychologist for independent practice as a licensed professional. All training time credited to internship is at the post-practicum and pre-doctorate level. Training opportunities include 2 hours of individual supervision with supervising faculty weekly (licensed doctoral-level psychologists), case conferences, didactic seminars, group supervision and clinical staff meetings weekly, as well as other periodic educational forums. The interns are provided an average of at least 2-hours of didactic activities weekly which also functions as an activity to allow interns time to socialize as a peer group. Continuing education seminars conducted by PCS are approved by the American Psychological Association. Interns in the program are expected to work 40-45 hours per week for a full year, and to minimally perform at the professional capacity of an entry-level psychologist. The applying candidate must be enrolled in an APA-accredited doctoral program (or regionally or accredited equivalent as determined by the PA State Board of Psychology) and must have all coursework completed by the start of the internship (August 2014).

Program Description

PLEASE NOTE: Sarah Reed has an APA accredited internship which provides internship training with children who have experienced trauma and/or have mild, moderate, and serious emotional and behavioral disorders. Our training model is a practitioner-scholar/scientist model emphasizing disciplined scientific inquiry and reflective practice. Two interns will be assigned to the Psychiatric Residential Treatment Program/Residential Campus School (60%-3 days/week) as well as the Millcreek School District placement (40%-2 days/week). One intern will be assigned to the Integrated Partial Hospitalization program (100%). The internship emphasizes broad-based training with children and adolescents with complex trauma, and severe emotional and behavioral disorders. Interns will receive training in child psychotherapy, psycho-educational assessment, crisis intervention, academic and behavioral consultation, and applied research. Interns gain experience working as part of multi-disciplinary teams with psychiatrists, nurses, social workers, and clinical care staff. We will review applications from school, clinical, clinical child or counseling students or students from combined school-clinical/counseling programs. We prefer students from School Psychology programs to have a master's degree in school psychology or an Ed.S. Students from non-school psychology programs must have a masters degree and be able to document practicum/work in a school/school-based setting including psycho-educational assessment experience. All students must provide at least one letter of recommendation from a supervising school psychologist.; All applicants must meet the following criteria: at least 1000 hours of intervention + assessment experience, (i.e. at least 50 hours of face to face individual or group therapy with children and/or adolescents)

Program Description

The Erie Psychology Consortium consists of two entities, Safe Harbor Behavioral Health (formerly Community Integration, Inc.) and Northshore Psychological Associates. Predoctoral psychology interns rotate across both clinical settings, receiving a variety of clinical experiences, including inpatient medical, acute rehabilitation, and outpatient settings. Safe Harbor Behavioral Health is a local, nonprofit agency that provides psychiatric, psychological, and counseling services to both adults and children. Northshore Psychological Associates is a group of psychologists in private practice, servicing Hamot Medical Center, HealthSouth Rehabilitation Hospital of Erie, and a number of other local hospitals. Northshore also provides a range of outpatient psychological services, including psychological testing and therapy. Interns will have the opportunity to collaborate with a variety of health care professions and work as a member of an interdisciplinary team.

Program Description

Each intern will participate in 3 of the following rotations: Child/Adolescence, Substance Abuse, Crisis and a Special Populations. Child/Adolescence The intern will function as a member of the interdisciplinary team, serving in multiple capacities depending on the case. Intern functions may include, but are not limited to: Integrated Clinical Assessments, psychological testing (if recommended), family-based counseling, behavioral consultation, or functional behavioral assessments. One of the main clinical components for the intern on this rotation will comprise as serving as the one of two members of a family-based treatment team. Substance Abuse During this rotation, interns will spend their time in the Newark, Delaware office of Open Door, Inc., an affiliate of Holcomb Behavioral Health Systems. The focus of this rotation is to give interns the exposure to the provision of formal substance abuse treatment. Clients being seen out of this office may be attending outpatient counseling on an elective basis or may be court mandated, in particular as a result of a DUI conviction. Interns will provide individual and group therapy as clinically indicated. Substance Abuse assessments are another clinical service that will be offered by interns. Special Populations The special population rotation provides interns with the opportunity to work with the forensic population, older adults and brain injured clients. The forensic population allows interns the opportunity to conduct clinical assessments for individuals with legal infractions to determine treatment recommendations that will be used in the client's court proceedings. For the older adults, interns will provide clinical assessment, neuropsychological screenings and individual and group counseling. For the brain injured clients, interns will conduct neuropsychological assessment and limited cognitive rehabilitation. CrisisServices Please see website for details.

Community Counseling Center is a large community mental health agency located in western Pennsylvania with various satellite locations throughout Mercer County. The Center has been offering comprehensive mental health services to adults, children, and families since 1957, including psychological and psychiatric services. During the course of the internship year interns will provide clinical services within the office by way of traditional outpatient services and psychological evaluation, and also within the community, at local schools. Opportunities for supervision and training in supervision are provided, along with development of specific clinical interests and specialty areas. Interns will conduct assessment interviews and hone diagnostic skills through written reports and psychological testing, including comprehensive vocational assessments. The internship is a 40 - 45 hour per week work experience (with 20 hours in direct client contact). Flexibility and a willingness to work early evening and some weekend hours are required.

Program Description

The program provides half-time for assessment and half-time for therapy. Interns typically complete 20 full psychological assessments and carry a therapy caseload of 15 students. Clients are between the ages of 4 and high school graduation, multicultural, and possess risk factors associated with lower SES. Children in this program come from both rural and urban backgrounds and are classified as *at risk* children. Typical assessments address issues of cognitive development, personality, learning disabilities, ADHD, processing deficits, neurological development, autism spectrum disorders, and a broad range of emotional disorders. Therapy clients present with an array of issues including mood disorders, behavioral disorders, attachment issues, sexualized behavior, child maltreatment, adjustment disorders, grief and loss issues, emerging personality issues and matters of family adjustment. Interns have the opportunity to work with houseparents, teachers, learning specialists, administrators, and a staff of psychologists, psychiatrists, psychotherapists, behavioral support specialists, pediatricians, social workers and other Health Services staff. A collaborative consultation model is utilized with both teachers and houseparents. The intern is an active participant on Service Provider Teams and provides consultation to Learning Assistance Teams. Successful interns possess good writing skills, are self-starters, are well organized, relate well to children and adolescents from various cultures, are able to manage crisis situations, work well as a team member, and possess professional maturity. A typical intern day may include: attending a Service Provider Team meeting, assessing a child, counseling, consulting with a houseparent or parent, participating in a pediatric or psychiatric staffing, group and/or individual supervision, and report writing.

concepts of counseling and change. These are structured groups that the interns and all staff members present throughout the year.

Program Description

The Immaculata University Predoctoral Internship Consortium provides predoctoral professional internships to PsyD clinical students in the Graduate Psychology Department at Immaculata. Positions not filled in Match I are offered to applicants from outside universities. The Consortium offers a 2000 hour internship, typically beginning July 1, conducted either on a full-time (12 months) or half-time (20+ hrs. per week for 24 months) basis. The Consortium is a cooperative training program including many agencies and organizations across the area, primarily within commuting distance of Immaculata. The Consortium is based upon a practitioner-scholar model of training. This internship provides an opportunity for interns to develop and refine clinical knowledge and skills, including diagnostic and assessment; therapies and other clinical services relevant to particular groups and individuals; consultation; ethics; and reflectivity and relational dynamics. The Consortium values knowledge and skills, as well as a scholarly attitude, diversity, professional behavior, and integration into the professional community. In particular, the Consortium encourages social and cultural awareness, ethical reasoning, scholarly inquiry, self-assessment, familiarity with biopsychosocial and psychotherapy research, and professional development which are integrated into clinical activities and seminars. In addition, the Consortium encourages interns to maintain effective coping skills and respectful, professional relationships with all clients and colleagues. Current sites: Bancroft, Belmont Comprehensive Center, Elwyn, Inc., J. J. Peters Institute, Northern Children's Services, Mid-Atlantic Behavioral Health, Rost Associates, Pennsylvania Comprehensive Behavioral Health, Rowan University Counseling & Psychological Services, Rutgers-Camden Student Health Center, Upper Bay Counseling Center, Philadelphia Consultation Center

Program Description

The pre-doctoral internship in behavioral health psychology provides an opportunity to work in an integrated care setting (community hospital) with family medicine resident physicians and other health care professionals, and a hospital inpatient and outpatient mental health population. Interns gain experience as part of an integrative healthcare team, assessing health risk, providing psychology assessments and group/individual therapy for patients with multiple health and/or concomitant mental health issues. While serving a general population, there is an emphasis on special populations, including patients with HIV, diabetes, heart disease, and bariatric surgery assessment. There are opportunities for inpatient consultation-liaison, treatment of substance abuse (Suboxone program), and teaching. Deadline for applications December 06th 2013. Please contact Rebecca Rusnak for application information (814-534-1142; email rrusnak@conemaugh.org), or our website <http://www.conemaugh.org/DoctoralPsychologyInternship/>

Program Description

The pre-doctoral internship at Lancaster General Health was designed to train future psychologists to work in health care settings that emphasize multi-disciplinary collaboration and treatment. Interns are expected to develop skill in evaluating and treating both hospitalized, medically ill patients as well as outpatients. As much of our work involves neuropsychological assessment, interns will be trained to administer and interpret a wide range of neuropsychological tests and to effectively impart findings to patients, family members and other health care providers. Our psychologists are an integral part of the treatment team in the hospital's Trauma-Neuro unit and the Lancaster Rehabilitation Hospital where we evaluate and treat patients with traumatic injuries, strokes, brain tumors and other disorders. On the outpatient side, our interns will be involved in the Memory Disorders Program. This program allows the intern to work as part of an interdisciplinary team consisting of neuropsychologists, neurologists, geriatricians and social workers. We provide diagnostic and treatment services to patients seen at the Central PA Pain Center and interns will work along side occupational/physical therapists and nurses in providing services in our fibromyalgia clinic. We evaluate candidates for bariatric surgery at the hospital's Bariatric Surgery Program and our interns will be trained to evaluate patients and communicate their findings and recommendations to the bariatric surgical team. We are certified providers of the ImPACT sports-related concussion program and interns will be actively involved in the evaluation and treatment planning for patients who have experienced concussions. We also accept referrals for brief psychotherapy for patients with depression, anxiety and other Axis I disorders. Cognitive-behavioral approaches are most often used. Patients with long-term psychotherapy needs are generally referred to other providers in the community.

Program Description

The program setting is within a multidisciplinary private psychiatric behavioral health organization, with multiple programs including inpatient, day hospital, outpatient, residential, and several community-based treatment programs. The population includes children, adolescents, and adults from urban, suburban and rural areas. Clients represent many ethnic and religious groups and all socio-economic classes. The program emphasizes standard competencies in psychology practice, current professional issues and trends in practice, and a clinical approach to care that addresses the needs of the mind, body and spirit. A distinctive feature of the program is the opportunity for interns to explore ways to integrate Christian faith and theology into clinical practice. There are two internship tracks-General Track: 3 positions; Child/Adolescent Specialty Track: 1 position. The General track includes 2 adult rotations and 1 child/adolescent

Program Description

As the oldest private psychiatric hospital in the United States, Friends Hospital has been committed to providing compassionate clinical care and creating a friendly and collegial environment for professionals for two centuries. Today, the hospital serves an economically, culturally, and diagnostically diverse population of individuals from Philadelphia and the surrounding areas.

Friends Hospital's Internship in Clinical Psychology provides an opportunity for doctoral candidates in clinical or counseling psychology to work under close supervision in a professional setting that is committed to the principles of recovery-oriented care and empirically-supported treatments. The internship program employs a Practitioner-Scholar model of training and is grounded in cognitive and behavioral approaches to therapy, including integrated care interventions. The program provides exposure to a broad range of clinical experiences, roles, and responsibilities, and encourages professional development through clinical experience, supervision, and didactic training. Cultural competence and ethical decision-making is emphasized. Throughout the course of the training year, interns participate in two, six-month major clinical rotations, which may include the adolescent unit, older adult unit, or intensive adult unit (for more acute mental illness), as well as several general adult units. Additional clinical experiences are available in our Crisis Response Center (a psychiatric ER) and the Greystone Program (a long-term community residence for chronically mentally ill individuals). Interns gain experience providing group and individual therapy, and supervision/mentorship experience while working with psychology practicum students in the hospital's externship program. Psychological assessment is an important part of the clinical training program, and interns complete a minimum of 4 integrated assessment batteries and several brief screenings. Interns receive weekly individual and group supervision, and attend regular didactic trainings provided by various speakers from within and outside of the hospital. Overall, Friends Hospital offers a large variety of clinical and professional training opportunities, and is committed to assisting interns in meeting their individual training needs.

Friends Hospital offers a stipend of \$22,568, 21 paid time off days (which includes holidays, vacation, sick time, and professional days), health and dental benefits, and free parking.

Applicants must have a minimum of 3 years of academic training and 1400 total hours (50 testing, 450 face to face interv., plus supervision & support hours) of experience. Holiday and monthly weekend rotations are an expectation of the internship.

Program Description

First year stipend is \$22,380. Program offers an optional second year (\$27,019 2nd yr w/o doctorate; \$30,222 2nd yr w/doctorate). In the first year, interns have rotations in inpatient treatment, outpatient psychotherapy (Employee Assistance Program and long-term outpatient psychotherapy), palliative care cancer treatment, bariatric surgery evals/tx, consultation/liaison psychiatry, and testing. The optional second year may include electives in adolescent school, child and family, neuropsychology, research, consultation/liaison, Ob/Gyn, or some other area as arranged. Second year interns are appointed as Fellows of the Psychoanalytic Center of Philadelphia. Seminars include internal offerings, courses with University of Pennsylvania psychiatry residents, and seminars and tutorials through the Psychoanalytic Center of Philadelphia. The program brochure is available at: <http://www.uphs.upenn.edu/pahedu/gme/psych.html>.

Program Description

The psychology internship program at Temple University is housed administratively within the Department of Psychiatry, but is also centered around three separate research-based clinics, two of which are affiliated with Temple University's Department of Psychology. For all interns there is an outpatient psychotherapy component to the internship experience centered in the outpatient psychiatry clinic at Temple's Episcopal Hospital. Along with the common element of the outpatient psychiatry service, the internship is comprised of three distinct year-long primary concentrations: (1) The CORE concentration (obesity research and treatment), the MAD concentration (intermittent explosive and other emotion dysregulation disorders), and the CAADC concentration (child and adolescent anxiety disorders). Each of these specific concentrations, or tracks, is centered in a research-focused, grant-supported clinic dedicated to the development and evaluation of empirically-supported treatment approaches for specific disorders and clinical problems. These three concentrations, will compliment the outpatient psychiatry component that is common to each of the three internship tracks. There is also a significant research component to the internship that is tied to the specific concentration. Each concentration is year-long (non-rotational), and applicants will be able to apply to one or more concentrations within the internship as appropriate for their interests and training. Interested applicants should consult the link to the psychology internship program from the Psychiatry Department's webpage (http://www.temple.edu/medicine/departments_centers/clinical_departments/psychiatry_psychology_pre_doctoral_internship.htm) for a fuller description of the program and the 3 tracks to which one can apply. The stipend for the 2013-14 internship year is under review and is likely to be increased somewhat, but a final decision on the exact stipend level has not yet been made.

Program Description

The mission of the Program is to prepare future clinical child psychologists to take leadership roles in developing, providing, evaluating, and disseminating effective psychological services for the diverse population of children and families with health and/or mental health needs. The Program is committed to preparing psychologists as leaders in the field, engaged in clinical practice, advocacy, interdisciplinary collaboration, and scientific investigation. The program offers depth specializations in pediatric psychology, clinical child psychology, pediatric neuropsychology, autism spectrum disorders, and behavioral health integrated care (community based primary care and school mental health). We stress the interconnections between child, family, health care and school/community systems, and emphasize the bidirectional impact of research and practice.

Other Application Requirements**Program Description**

The internship program at CAPS is based on a practitioner/scholar approach to training in which we emphasize learning through closely supervised clinical practice. Interns receive intensive training and experience in performing central responsibilities of a psychologist in a multidisciplinary counseling center setting including: individual psychotherapy, group psychotherapy, diagnostic assessment, crisis consultation, supervision, and outreach. The internship also strives to foster intrinsic growth in the areas of multicultural competence, social justice, ethical practice, and professional identity development. A Multidisciplinary Approach: As a center whose staff is comprised of licensed psychologists, psychiatrists, and social workers, we value a multidisciplinary approach to training and service delivery and emphasize the development of the capacity to work collaboratively with psychology colleagues and professionals from other disciplines. Multicultural Competence: The University of Pennsylvania is a culturally diverse institution, with students from all over the country and all over the world, and with every form of diversity represented. We are committed to training interns to develop the self-awareness, knowledge and skills needed to work effectively in this environment as a therapist, consultant, and advocate for change. Ethical Practice: We strive to train interns who will become practitioners with the highest ethical standards. We particularly value the use of consultation and collaboration in ethical decision-making and interns have many opportunities to see this in action in multidisciplinary team meetings and formal and informal staff collaboration meetings. Professional Identity Development: We view the internship as the capstone of clinical psychology training. We believe that the strong generalist skills they attain through our internship will enable interns to become psychologists prepared to work in university counseling centers as well as a multitude of other professional settings.

Program Description

Tuttleman Counseling Services (TCS) is dedicated to providing a high quality clinical psychology internship experience to graduate students in psychology. Doctoral students in counseling, clinical, and closely related fields who have completed all course work and practica, with the exception of the dissertation, are invited to apply. Our interns are strongly supported and nurtured in their professional growth during their internship year, which is viewed as an essential transitional step in their development as they more fully take up their professional role. The integration of prior learning, including both theory and evidence-based interventions, with their own personal interests, core beliefs and interpersonal styles is a cornerstone of our training philosophy. The development of an increased sense of competence and confidence is given equal weight with the continuing development of clinical skills and knowledge. In addition to formal,

Program Description

The internship in clinical psychology at the PCOM Center for Brief Therapy is a training program for doctoral psychology interns based on the practitioner-scholar model of professional psychology training and practice. The internship is exclusively affiliated with the Psy.D. program in Clinical Psychology at PCOM. The internship at the Center for Brief Therapy emphasizes the integration of science and practice, informed by the local clinical scientist model, and an emphasis on cognitive behavioral practice. The internship stresses foundational competency development and consolidation in the areas of relationship, diversity, and applied ethics, and specific competency development in knowledge, skills and attitudes involving assessment, diagnosis, case conceptualization, treatment planning, intervention, consultation, supervision, and research and education. Interns also represent the role of psychology while working within an interdisciplinary team of health care professionals. The bulk of the internship is in the major rotation at Center for Brief Therapy, with a minor rotation in an assigned neighborhood PCOM Health Care Center. Our training curriculum strives to be relevant to the current demands of practicing psychologists and the populations they serve. The activities of the internship are designed to teach and develop professional competence through education, modeling, experience and supervision. The internship emphasizes the provision of service to culturally diverse communities, as well as the treatment of underserved populations with significant health disparities. The internship strongly values cultural competence and ethics. We strive for interns to employ scientific attitudes and analysis to the work they do. Overall, we expect interns to hone a range of competencies which are central to effective functioning as a professional psychologist, such that they emerge from our internship program fully prepared to function as entry level professionals.

Program Description

The Pre-doctoral internship at Assessment & Treatment Alternatives offers students an opportunity to participate in an intensive and exciting forensic training program. The mission of our clinical and forensic work is to provide the highest caliber of diagnostics, psycho-legal consultation and treatment to our patients, clients and referral sources: clinicians, attorneys, the courts, social service and criminal justice agencies. Our forensic mental health services and programs include: The TAP Program for the evaluation and treatment of juvenile and adult sexual offenders. A Forensic/Therapeutic Foster Care Program Family Assessment Center-Providing an array of evaluation & treatment options in custody and abuse situations. The staff at ATA provide a variety of forensic evaluations including: Competence to Proceed (trial, sentencing, execution) Criminal Responsibility Sentencing Mitigation (including death penalty) Juvenile Waiver Sex Offender related evaluations for both juveniles and adults Evaluation of traumatic emotional distress and/or assessment of exaggerating or faking of emotional distress. Sexual and physical abuse and neglect Evaluations relating to parenting capacity, termination of parental rights and parental alienation issues. The pre-doctoral intern will have an opportunity to participate in working with staff in all of the above areas.

Program Description

The Philadelphia VA Medical Center psychology internship is a new internship since 2011. We are currently in the process of applying for APA accreditation, however the first 3 classes of interns are eligible for VA employment. Four internship slots are available, all general track. Four 6-month rotations will be selected based on intern training needs and interests. One rotation will be working in a patient-centered medical home model of care (Primary Care-Mental Health Integration or Health Promotion/ Disease Prevention) and one rotation will be Evidence-Based Therapies. Other rotations include: PTSD Clinical Team, Inpatient Psychiatry, Comorbid PTSD and Substance Use Disorders, Community-Based Outpatient Clinic, Sleep Clinic, Polytrauma and Neuropsychology, and Residential Rehabilitation Treatment Program. Interns will also have an outpatient clinic therapy supervisor throughout the year who will supervise a small caseload of cases from the outpatient mental health clinic. A year-long track in Integrated Behavioral Couples Therapy involving a seminar and supervised practice is also available. Interns who do not select the Neuropsychology rotation will have an assessment supervisor and complete at least 2 integrated reports. In addition, all interns participate in 2 hour weekly didactics on a variety of topics and 1 hour weekly group supervision. Additional educational opportunities are available throughout the internship. All interns will work with a faculty member and have the ability to conduct a relatively small research project by the end of the training year. The philosophy of our psychology training program is best described as scholar-practitioner. We advocate the integration of clinical research with clinical practice. Our training model is developmental and designed to promote professional competence through a sequence of training experiences that are graded in complexity.

Program Description

The CHC Consortium is a cooperative pre-doctoral internship training program that includes clinical service agencies across the greater Philadelphia region. The Consortium provides weekly didactic activities and oversight of the integration and integrity of the educational and training aspects of the intern's experiences, while the intern's individual supervision and clinical training occur at a primary member agency or site(s). The overall objectives are to provide interns with depth and breadth of training; expose them to new populations and settings; assist them in gaining greater expertise in settings in which they may have had prior experience; and assist them in integrating academic and scientific knowledge with clinical practice. Interns are expected to develop competence in the following areas: assessment, evaluation and testing; psychotherapy and intervention; consultation, outreach and program development; crisis intervention; supervision and management; adherence to ethical standards and development of a professional identity; and professional presentation and communication skills. The Consortium requires 2,000 minimum hours to complete the internship. Phase I of the APPIC match is open only to Chestnut Hill College students. Phase II of the Match is open to other applicants participating in Phase II of the match, including students from other doctoral programs.

Program Description

The Drexel Counseling Center offers two full-time positions for the 2014-2015 training year. The Counseling Center has two locations; one on the Main Campus and one on the Center City campus. The Counseling Center's mission is to support the academic goals of the students through assisting students with personal challenges that interfere with their academic progress, and to promote and foster academic, personal and interpersonal development of the Drexel students. Psychological services are both remedial and preventative. The Counseling Center seeks to be fully integrated into the university community. Services provided to the campus community include individual, couple, and group counseling and psychotherapy; psychiatric services; outreach presentations and on-going seminars or workshops; emergency and crisis response; triaging and consultations. The majority of clients present with concerns such as depression; anxiety and stress; relationship and family concerns; and identity and existential concerns; sexual abuse and trauma; eating and weight concerns; substance abuse concerns; and academic or vocational concerns. The Counseling Center operates within a short term model, but opportunities to conduct long term therapy are possible. Drexel's co-op program, quarter system, and large number of International students make Drexel stand out from other university settings.

The Drexel internship program is committed to providing a nurturing environment to foster intern's individual goals, growth of previously acquired competencies, and personal interests and needs of each intern; to facilitate the development of a broad range of new clinical competencies; and to support and nurture professional development as our interns prepare to become independent practitioners either for generalist practice, or entry into a college counseling center setting. Doctoral interns are expected to conduct intakes, assessments, individual, group, possibly couple's counseling, as well share on-call/emergency responsibilities, walk-in hours and triaging. There may be an opportunity for supervising doctoral practicum students. Further, interns are expected to participate in various outreach services and workshops.

Program Description

The internship at Allegheny General Hospital involves major rotations in child outpatient, adult outpatient and partial hospitalization, and neuropsychology. Additional experiences are available in consult/iaison, behavioral medicine, and child trauma. There are three major four-month rotations. Minor rotations are available each of the three rotation periods. The training model is scientist practitioner. The program aims to train generalists but the intern can choose to receive a majority of experiences in child, adult, or neuropsychology. All interns must receive experience and training in assessment and therapy as well as in child and adult populations. The intern can meet Division 40/INS guidelines for training in neuropsychology by completing two rotations in neuropsychology. The intern interested in child populations can complete two rotations in child and one rotation in adult. The intern interested in adult populations can complete two rotations in adult and one rotation in child. The interest of an applicant in a particular experience does not enter into the recruitment process. Research experiences are available. The didactic experiences include the equivalent of three year long seminars, one of which is the required internship seminar and the other two are chosen from a menu of 11 seminars which are also taken by the psychiatry residents. Additionally, attendance is expected at departmental grand rounds. The intern may attend other departments' grand rounds. Training is multi-disciplinary and includes interactions with residents in psychiatry and other medical specialties, social workers, nursing staff, and other paraprofessionals.

Program Description

The program provides an developmental practitioner model of training consisting of didactic training and supervised practice. The staff is multidisciplinary and theoretical orientations also are varied. Interns are prepared for careers in university counseling centers and other venues of direct clinical practice. Areas of practice and training include individual, group, and couples counseling, intake/clinical assessment, consultation/outreach, crisis intervention, multicultural issues, provision of clinical supervision, and issues pertinent to professional identity development.

Program Description

Our internship program offers training in general clinical psychology with the opportunity to emphasize interest areas, such as neuropsychology, geropsychology, health psychology, and PTSD. Interns complete three four-month rotations with the opportunity to pursue a one-day per week externship placement at the VA *or* at a community facility. Interns also participate in several weekly didactic programs, to include case conference, D-group, intern seminar series, and journal clubs.

Program Description

Western Psychiatric Institute and Clinic (WPIC) and the Department of Psychiatry at the University of Pittsburgh School of Medicine offer an APA-accredited, rotating internship in clinical psychology. We adhere to a 'clinical science' model of training and professional development in which the primary principles are a commitment to empiricism for guiding both clinical and scientific work, and an emphasis on the reciprocal relationship between clinical practice and the development and investigation of important questions for clinical research. We have three general goals for the program: (1) Develop and consolidate clinical skills in psychiatric assessment, conceptualization, and evidence-based psychological interventions; (2) Provide broad clinical experience within multidisciplinary treatment and research teams located within a university-based medical center; and (3) Consolidate and enhance skills in clinical psychological science and supplement the clinical experience with adequate time and resources for empirical exploration of a specialty area. Our program provides two options: (a) a one-year general internship emphasizing clinical experience with major disorders in children and adults; and (b) a multiyear clinical research track that begins with the predoctoral internship and includes additional years of postdoctoral training to provide participants with the skills necessary to conduct clinical research. Applicants to the program initially commit to one year of training. Decisions about postdoctoral training are made in the spring of the internship year (and are subject to availability of postdoctoral training slots). Strengths of the program include assessment and diagnosis of psychopathology (both Axis I and Axis II disorders) in adults and children, psychosocial treatments of major disorders (with an emphasis on evaluation and outcome research), behavioral medicine, and the application of new quantitative tools to clinical research problems. available. In addition, this intern will also participate in hospital-wide and off-site programs with their fellow interns.

Program Description

The Watson Institute is a nonprofit organization serving children & adolescents with special needs: outpt, partial hospital, consultation & training, & 2 Approved Private Schools. Interns participate in outpt & consultation, other opportunities may be available. Watson offers training/consultation services to educators & mental health personnel regionally, nationally, & internationally. Internships can be individualized. Defined specializations include autism or general child & adolescent. Participation in developmental evaluations is a significant component of the internship. Interns gain extensive experience in assessing developmental disorders, including autism & low incidence conditions. Outpatient mental health services serve children & adolescents with autism spectrum disorders. Services include individual & group therapy, home/community-based behavioral support services, & psychiatric services. Specific goals for the training program 1. Intervention skills for work with children & adolescents with special needs & their families in ways that are child-centered, family focused, grounded in the empirical psychological literature, & consistent with best practices 2. A broad range of assessment & diagnostic skills with children/adolescents & their families, using a wide variety of methods including diagnostic interviewing, functional assessment, objective & projective techniques. 3. Consultation & training skills for use with other psychologists, other professional disciplines, & in the community 4. Competence in professional conduct & the ability to identify & appropriately respond to ethical & legal issues arising in clinical practice 5. Competence in assessment & intervention skills with underserved populations 6. The ability to assess implications of developmental differences.

Program Description

The Civil internship is comprised of 3 rotations of 4 months each: Rotation A-the intern will be involved in assessing new admissions to the hospital (2) per week on average. They will also attend treatment team meetings and have some individual clients and one group therapy assignment. Rotation B-the intern will have primary responsibility for facilitating the hospital's Co-occurring Disorders program (Mental Health/Drug & Alcohol). This includes group therapies, assessments, monitoring 12 step programs and teaching a Psychoeducational class. Rotation C-the intern will become involved in the on-site Sex Offender treatment program. During this rotation the intern will take part in therapeutic interventions; assessments and research activities for the program. The intern will also be involved in helping to facilitate intervention opportunities for those patients in the general hospital population that also have sex offense/issues in addition to their mental health challenges. All interns in the program will also be involved in on and off site training opportunities as well as becoming proficient in documentation, report writing and treatment planning. Individual and group therapy modalities are also used extensively throughout the internship year. Supervision is provided by doctoral level, licensed staff, on site at the hospital. Supervisory time is both formal and informal with many instances of staff Psychologists co-facilitating interventions with the intern. Hours and extent of supervision meet all licensing and credentialing standards. The dedicated forensic internship position consists of two six (6) month rotations: one in court ordered assessment and one focusing on therapeutic interventions to include the Co-occurring Disordered program at the facility. Sex offender treatment experience is also batteries, and are trained in mental health assessments with a focus on diagnostics and clinical formulation. Morrison Outpatient sites are collaborative, cross disciplinary teams located in urban areas, and serve only low income clients. We value and appreciate diverse applicants, and strongly encourage applications from bilingual Spanish and Vietnamese clinicians.

Program Description

Penn State's Center for Counseling and Psychological Services (CAPS) offers a full-time 12 month pre-doctoral internship designed to provide high quality training in the multiple functions carried out at a major university counseling center. Intensively supervised experiences are offered in individual, couples and group counseling/psychotherapy, crisis intervention, assessment and diagnosis, drug and alcohol counseling, consultation and outreach, research in an applied setting, supervision and training, and other activities appropriate to the setting, including a multicultural case conference, a psychiatric case conference and an opportunity to become involved as a facilitator for a Race Dialogues group. Professional development is fostered within a service-delivery system that has a long tradition of dedication to excellence in training. The Program has been APA-accredited for 29 years. Our last site visit was in 2006 and we received accreditation for seven years. We will be site visited in 2013. CAPS is the primary mental health and personal counseling resource for over 42,000 students at Penn State's University Park Campus. Each year our staff sees about 2,000 Penn State students for a total of over 15,000 contacts. During their years at Penn State, nearly one-sixth of all students use our services for a wide variety of problems ranging from normal developmental issues to more extreme psychopathology. Typical presenting problems include interpersonal concerns, depression, anxiety, lack of motivation or concentration, poor academic performance, eating disorders, and sexual difficulties. Less typical but frequently seen problems include various forms of more severe psychological disturbance. An extensive group program is offered, with about 20-25 groups per semester. Opportunities for an optional summer rotation at a private psychiatric hospital or at Career Services on campus. Please refer to our website for a complete description of our program.

Program Description

The doctoral internship at WellSpan Health is contained within a community-based, not-for-profit integrated health system serving the greater Adams-York County region. Behavior Health services are offered in a variety of settings including the inpatient Adult Behavioral Health Unit of the York Hospital and five outpatient locations serving the full range of mental health needs of the community from children to geriatric patients. Interns perform a variety of clinical functions, including individual, marital, family and group psychotherapy, diagnosis and assessment, in-service training, and consultation with medical staff. There are ample opportunities in our system to work with children and we encourage applicants with an interest in working with children to apply. A major objective of our internship is training psychologists to function effectively as part of a multi-disciplinary team within a large, integrated health system such as ours. Our internship program has a strong cognitive behavioral theoretical orientation and our didactic training relies heavily on demonstration, role-play, and review of videotaped interactions. A defining emphasis of the internship is extending proficiency in cognitive behavioral psychotherapy. We believe diversity strengthens our program and strongly encourage applicants from under-represented groups to apply.

Program Description

The Ponce School of Medicine Psychology Pre-doctoral Internship is designed as a General Internship and is seen as an integral component of the doctoral training process in Clinical Psychology. The program consists of clinical experiences including psychotherapeutic interventions (individual, marital, family and group), psychological testing (intelligence, personality, psychoeducational, neuropsychological) and consultation with collaterals (relatives, schools, court, medical staff, etc). Experiences in the areas of autism, health psychology, and neurocognitive rehabilitation have been incorporated for those interested in obtaining specific, structured and supervised exposure to these areas. The internship program includes a sequence of didactic experiences designed to enhance the interns' theoretical background and capacity to apply knowledge to specific clinical populations and situations. Interns also participate in weekly family team interventions and have the opportunity to explore the academic world by utilizing their clinical and academic experience in the supervision of entry-level graduate students and in serving as Teaching Assistant to professors.

Program Description

The Psychology Internship Program at the VA Caribbean Healthcare System is a full-time pre-doctoral training experience designed to promote the professional development of interns consonant with current professional and ethical standards. Our model of training is practitioner-scholar. Our Internship Program is committed to providing significant experiences needed to develop conscientious, ethical, and competent psychology professionals capable of providing high quality psychological services. We are equally committed to providing a culturally sensitive and relevant training experience for bilingual (Spanish-English) trainees. We aim at developing psychology professionals not only capable of providing services within traditional lines, but also capable of responding to emerging service delivery trends and professional challenges. Furthermore, we provide a learning environment, within which trainees are treated with courtesy and respect in the context of a collegial relationship with their supervisors and other staff members. We assume the obligation of respecting the interns' right to accessible training staff, close supervision, and support to successfully complete their training. The training model we follow is primarily experiential and has a strong emphasis on practice informed by science. Specifically, we follow a practitioner-scholar training model that seeks to integrate research, theory, and practice. Consonant with this model, the program encourages and assists interns to utilize empirical research and to develop critical thinking skills, gain understanding of the scientific literature, and base case conceptualization and clinical interventions on theoretical foundations. The population we serve is primarily Spanish-speaking Puerto Rican and all our documentation is done in the English language. Interns must be capable of providing psychological services fluently in both Spanish and English. Bilingual applicants of diverse backgrounds are strongly encouraged to apply.

Program Description

The primary goal is to provide a comprehensive predoctoral training program, which ensures the development of adequate levels of proficiency across the basic areas of clinical psychology including assessment, therapy, consultation, and clinical research. A central mission of the Training Consortium is to promote diversity of perspective and experience in its pursuit of academic excellence in research, teaching, and service. The overall training objectives of the program reflect a commitment to the development of clinical psychologists who are clinical scientists with broad-based skills. Particular emphasis, however, is given to CBT and behaviorally-oriented approaches to assessment and treatment in both the Adult, Child, and Health Psychology/Behavioral Medicine Tracks. Training in the Child and Neuropsychology Tracks is more eclectic in orientation. A secondary goal of the program is to provide a beginning concentration in a particular area of clinical psychology. The Internship offers intensive training in four specific areas (tracks) of clinical psychology: 1. Adult, 2. Child, 3. Health Psychology/Behavioral Medicine, and 4. Neuropsychology. All clinical psychology residents are admitted to the training program within a track or area of emphasis, which represents their career focus or interests. In the Adult and Health Psychology tracks, each resident completes two 4 month rotations with their specialization. The third rotation for the year is determined by the Training Committee, with input from the resident and his/her advisor, and is in an area either inside or outside of that individual's chosen track. Residents in the Child track complete a full year of training in clinical child and/or pediatric psychology with the option for some clinical training with adults. Residents in the Neuropsychology track complete a full year of training in clinical neuropsychology.

Program Description

The Charleston Consortium is a collaborative effort of the MUSC and the Psychology Service of the DVAMC. The training program provides a one year, full-time training experience for Ph.D. students in APA accredited clinical, counseling, and school psychology programs. It is fully accredited by APA. Ours is a scientist-practitioner model, though clinical scientist trainees are also comfortable in our program. We believe that psychology interns should receive training that integrates research and clinical practice. We expect interns to examine the efficacy of what they do with clients and to review the research literature for guidance about which treatment strategies are best suited to particular problems. Our objective is to produce interns who approach their clinical work with an investigatory, inquisitive attitude and who are competent to conduct clinical investigation. A second important philosophical foundation for the Program is a belief that it is important to provide a balance of broad-based, "generalist" training and some measure of "in-depth" training for interns who wish to specialize. We designed our Program so that interns wishing to specialize can do so. However, interns receiving specialty training also participate in more general training experiences. A third philosophical belief providing a foundation for the Program is that it is important for interns to work with a variety of client populations, including those frequently underserved by mental health professionals. A fourth important philosophical belief is that interns must be provided with training experiences that expose them to "cutting edge" aspects of scientist-practitioner work in the 21st century. A final philosophical belief is that good training is best accomplished in an atmosphere of mutual respect between faculty and interns. We believe that the best learning environment is one in which one learns by doing and learning is fun. We attempt to create such a learning environment by treating interns as junior colleagues.

Matched applicants must complete a Clemson University employment application, which includes a required Pre-Employment Investigation. Employment at Clemson University is contingent upon favorable Pre-Employment Investigation results.	

Program Description

Note: Please see our website for the most complete and up-to-date information about our internship program. The internship year at CAPS is designed to promote the developmental process in which interns move from the role of student to that of colleague. Interns are encouraged to take an active role in designing their training to meet their professional goals, interests, and needs by taking advantage of the many training opportunities we offer. Every effort is made to provide a supportive and accepting environment that models and attends to personal growth and the establishment of professional identity. Clinical service training activities include 14 to 19 hours per week of individual, couples (limited), and group counseling as well as conducting triage assessments. Other required activities include provision of supervision, outreach programming and consultation, crisis intervention and debriefing, psychological testing, and research/dissertation work. Core training activities include 3 weeks of orientation, weekly training seminars, individual supervision (2 hours per week with primary supervisor and secondary supervision is optional), supervision of supervision, supervision of group counseling, supervision of testing, and case conferences. Interns may also choose to participate in a number of training opportunities that can be designed to supplement their core training activities. Examples of these areas of emphasis include intensified training in the treatment of substance misuse issues, psychological assessment, the treatment of eating disorders, outreach (beyond the requirements), and inpatient assessment. Supervisors evaluate each intern's progress formally at the end of each semester. Supervisors assess current strengths and growth areas, and these evaluations are used to focus the next semester's supervision. Interns are afforded the opportunity to evaluate their supervisory experiences throughout the year, and they evaluate elements of the entire training program twice during the internship year. While all CAPS staff members play a role in internship training, primary supervision and core training experiences are provided by CAPS' 5 licensed psychologists.

Program Description

The guiding philosophy of the CHDC psychology internship program is Developmental-Apprentice-Practitioner (DAP) Model. Our mission is to provide a training environment that facilitates interns transition from graduate students to professional psychologists. CHDC internship program builds upon the theoretical, empirical, and clinical foundations that interns receive from their respective academic psychology programs. We provide a comprehensive practice environment that offers high quality services to students and staff of the University of South Carolina. The Clients-Interns-Trainers form an inextricable alliance that guides the content of developmental, apprentice, and practice approaches in our training goals and objectives. These goals are developed in our dedication to provide quality care and quality training in an atmosphere of respect and consideration. We initially require that interns demonstrate competence in the clinical areas of assessment/crisis intervention and psychotherapy. Psychotherapy is the goal that receives the most attention at our center and is covered in all phases of our training program. Each intern is assigned a social work field placement student to clinically supervise during the fall and spring semesters. Therefore, supervision is another important goal in our program and is monitored in a weekly supervision-of-supervision group co-lead by a Psychologist and Staff Social Worker. Group Therapy provision and facilitation is an integral experience offered to interns. Interns are immediately involved in several aspects of our Outreach/Administration activities. Individual and group supervision each take place weekly and offer the intern an opportunity to continually grow and develop throughout the year. Please see our website for detailed information about our internship program or call for more information.

Program Description

The program offers training in Clinical and Counseling Psychology using a Practitioner Model. Interns complete three major rotations, one of which is a mandatory rotation in Inpatient/Outpatient Mental Health. Other major rotation selections include Health Psychology, Home Based Primary Care, Addiction Disorders Services, Neuropsychology, and outpatient PTSD Clinical Team. Dependent on the major rotation selected, interns may also choose a minor rotation in the areas of Geropsychology/Extended Care, Health Psychology, Neuropsychology, and Addiction Disorders Services. Areas of emphases that transcend the training year can be chosen in the areas of Psychopharmacology and Geropsychology. Faculty are diverse in their clinical experience and theoretical orientations. Represented approaches include Cognitive Behavioral, Existential, Integrative and many faculty are trained in a variety of Evidence Based Treatments.

Program Description

The primary goal of the psychology internship is to prepare doctoral candidates for the practice of professional psychology. Training experiences include intake assessment and psychotherapy in outpatient and residential settings to children, adolescents, and adults. Training in psychological evaluations includes parental fitness evaluations, disability determination assessments, and internal and external consultations to facilitate diagnosis and treatment. Interns receive training in emergency services, such as crisis evaluations and inpatient referrals, and may participate in the on-call rotation. Interns participate in two hours of individual supervision and one hour of group supervision each week. All supervision is conducted with licensed psychologists. One hour of didactic/research training and one hour of clinical case staffings are conducted weekly. Interns are expected to provide 15-25 hours of direct client services each week, with assessment accounting for approximately 20% and therapy accounting for approximately 80% of direct services. Interns participate in at least three performance evaluations throughout their internship year.

Other Application Requirements

The Sioux Falls VA Health Care System Training Program will closely adhere to guidelines put forth by the APA, VA and APPIC. As required under APPIC policies, offers to interns may not be made before Match Day. Further, the Sioux Falls VA Health Care System is an Equal Opportunity Employer. The selection of interns is made without discrimination on the basis of race, color, religion, sex, national origin, politics, marital status, physical handicap, or age. Applicants who have been selected during the uniform notification period will need to complete a Standard Form 171 for the appointment to be processed. All new Medical Center employees are subject to background checks and a random drug screen during their orientation period. Interns are included in the random selection for drug screening during their appointment. Because of significant time delay between completion of criminal background checks and the start of the internship year, interns shortly

Program Description

Frontier Health is a community mental health organization servicing communities in Northeast Tennessee and Southwest Virginia. It offers a wide range of services for children and adults. Opportunities are available to work with children or adults in individual, group and family therapy. One placement will be in SW Virginia (15 minutes from Kingsport, TN) and will involve intake assessments, therapy and assessment with children and youth. The second placement is with children and youth in Kingsport, TN and will involve outpatient as well as experience in an adolescent residential setting. The third and fourth placements are working primarily with adults and will be split between two major sites in the Kingsport/Johnson City/Greeneville, TN area. Each of these positions will carry a caseload for which they will be responsible (under supervision) for diagnosis, treatment planning and treatment. The intern will be exposed to Forensic Evaluations that determine competency to stand trial and support for the insanity defense that are conducted by Frontier psychology staff. The intern will be an integral part of the interdisciplinary staff of their assigned site and as such will attend staff meetings, clinical staffings, and work closely with Social Workers, Licensed Professional Counselors, Nurses, Nurse Practitioners and Psychiatrists. Frontier Health has a fully implemented electronic record. Interns will be expected to participate in psychological assessments. Frontier Health is an approved sponsor for APA training and sponsors approximately six workshops a year, at least one or two with internationally known presenters, and interns are expected to attend.

Program Description

Cherokee Health Systems (CHS) is a comprehensive health services organization in East Tennessee. The primary goal of our internship is to provide an intensive and diverse clinical training experience within a community health setting. Because CHS provides progressive and broad-based health services, interns will have exposure to a unique range of clinical training opportunities, including integrated primary behavioral care, psychosocial rehabilitation, as well as traditional outpatient mental health care. Interns rotate through a variety of clinical settings throughout the year. The objectives of the clinical training experience are to expose interns to (1) assessment, treatment, and consultation within a range of treatment modalities (e.g. integrated primary care, traditional mental health, day treatment), (2) opportunities to work with multiple disciplines (e.g. family physicians, internists, nurse practitioners, psychiatrists, social workers, nurses, case managers), (3) a variety of theoretical orientations (e.g. cognitive-behavioral, systems, psychodynamic), and (4) diverse developmental (children, adolescents, adults, elderly) and ethnic (rural Appalachian, African-American, Hispanic, urban) populations. To meet these objectives, we aim to develop professional competency in a range of clinical settings. To allow for a diversified training experience, interns participate in two clinical placements at a time. Each intern cycles through a traditional community mental health placement, integrated primary care placement, and a psychosocial rehabilitation placement. We also recognize the individual training interests and needs of each intern. The internship structure is designed for flexibility to allow for each intern to incorporate elective clinical experiences to increase the breadth, depth, and diversity of their training. We will work with each intern to develop his or her own unique clinical interests within the core framework of our internship.

Candidates who match with us must complete a criminal background check. Final hiring for the internship is contingent upon clearing the check.

Program Description

The internship program prepares interns as strong generalists for entry level, doctoral positions in the practice of psychology. The basis of the training program is a developmental apprenticeship model that has as its overarching goal the professional growth of the psychology intern. As we apply this model, interns are provided with the necessary training, teaching, supervision, modeling and mentoring to meet their professional and personal goals. Interns gain experience in individual, couples and group counseling/psychotherapy; crisis intervention; assessment; teaching, supervision and training; and community intervention (outreach and consultation). The Stress Management Clinic offers a full menu of services that interns may participate in throughout the year. Training includes a weekly case conference, a weekly seminar with the university psychiatrist and/or psychiatric clinical nurse specialist, and up to two additional hours per week of didactic seminars. Interns are encouraged to take an active role in selecting their supervisors and designing their training to include their professional interests and needs. Interns may choose to have a more specialized focus on areas such as training and supervision, couples therapy, stress and wellness, diversity, career counseling or other areas of their interest. The internship program is highly valued by Counseling Center staff members and every effort is made to provide a warm and supportive environment that models and attends to professional and personal growth. Note: Our program will not consider applicants from programs that require additional contracts or evaluation forms filled out.

Program Description

The UTPPIC consists of a number of cooperating agencies which offer a wide variety of training experiences. The program is administered through the Dept. of Psychiatry at the UTHSC. Interns complete three 4-month rotations, each with a 24 hr. major rotation and a 12 hr. minor rotation plus seminars. Each intern's program is individually designed to meet his/her training needs. The program follows a scholar-practitioner model with a focus on clinical training that is supported by the current psychological literature. Interns are exposed to both special education and general education programs. There is an opportunity to interface with a wide range of professionals. The Psychological Services staff as well as the interns are also involved in maintaining a unique family counseling program and providing support programs for families who have a child/children with autism. Both LISD and Psychological Services recognize the importance of and the need to foster diversity and increase multicultural awareness. Individuals with minority ethnic/cultural backgrounds are especially encouraged to apply.

Program Description

The Psychology Internship Program adheres to a generalist model of education and training. In all experiential activities in our training program, we promote the development of a solid, professional identity that incorporates critical thinking, ethical practice, and multicultural sensitivity. We believe this generalist model to be an effective one for training interns and for promoting the advancement of psychology as a profession. The faculty selected eight core competencies that define psychological skills that interns learn in our generalist model of training. These areas are (a) psychological assessment, (b) psychological intervention, (c) consultation/liaison, (d) teaching/education, (e) scientific inquiry/critical thinking, (f) professional behavior/ethical practice, (g) individual and cultural diversity, and (h) self-reflectivity. The internship faculty provides an intensive training experience to predoctoral, professional psychologists. The program offers interns a balanced exposure to inpatient, outpatient, and consultative settings through a system of major and minor training rotations. Interns establish training relationships with an individual faculty member through supervision of a small number of long-term psychotherapy cases. Listed below are the major and minor rotations. These rotations have been carefully designed by the Psychology Training Committee. MAJOR ROTATIONS: Geropsychology, Mental Health Clinic, PTSD Clinic, Primary Care, Psychosocial Rehab Treatment Program, Psychology Consultation-Liaison Program, Substance Abuse Treatment Program (SATP). MINOR ROTATIONS: Child Consultation (ETSU), Clinical Research (VAMC, ETSU), Couple and Family Therapy, Family Medicine (College of Medicine, ETSU), Mental Health Clinic, Home Based Primary Care, Homeless Veterans Program (VAMC), MH Intensive Case Management, Psychology Leadership (VAMC), Spinal Cord Injury (VAMC), SATP (VAMC), Neuropsychology.

Program Description

Internship takes place in outpatient and residential settings in a comprehensive medical school and community mental health complex, with liaison community affiliates. The total program includes clinical, counseling and school venues devoted to a variety of assessment and treatment interventions. Current activities emphasizing neuropsychology and geropsychology are paramount. Didactic activities include seminars, case conferences and grand rounds.

Program Description

This is a consortium consisting of 5 very diverse training sites: two VA Medical Centers, the Vanderbilt Psychological and Counseling Center, Vanderbilt Adult Psychiatry, and Vanderbilt Child and Adolescent Psychiatry. Applicants indicate on the application cover letter which site(s) they would consider for primary placement. Interns are accepted into a particular primary placement and spend 3.5 days a week training there throughout the year. After the beginning of the internship, through a collaborative process, interns are assigned a secondary placement at a different Consortium agency and will spend 1 day a week in training there throughout the year. The remaining half day is spent in seminars and case conferences with all of the Consortium interns. The Consortium agencies have very different clinical missions; therefore a wide variety of different training experiences are available within the Consortium. Depending on the selection of primary and secondary placements, interns can find in-depth training experiences that prepare them for employment in a variety of post-internship settings including academic medical centers, university counseling centers, community mental health centers, and VA medical centers. Extensive training is available in multiple areas of psychological practice, including individual and group psychotherapy, (university) community outreach, behavioral medicine and hospital practice, geriatrics, assessment, consultation, and practice in highly interactive multidisciplinary settings. The variety of training experiences offered is too broad, and the organizational structure of the Consortium too complex, to explain briefly here. The most detailed description is on the website. Our website (vu-vapsychinternship.org) has been updated for the 2014-2015 year; changes from the previous year are minor. Contact the Consortium as indicated above with any questions.

Program Description

Our internship program is based within a comprehensive university counseling and mental health center that includes psychologists, psychiatrists, clinical social workers, and licensed professional counselors. Interns receive extensive training and experience in individual and group therapy, prevention and outreach, and supervision of practicum students. Interns are exposed to a wide range of presenting problems within a multicultural campus of 50,000 students. Our center has a very active group therapy program, with 25-30 psychotherapy, structured, and special populations groups offered each semester. Interns participate in a comprehensive orientation and training program during the first four weeks of the internship, and attend a variety of seminars throughout the year. The CMHC staff is committed to addressing the needs of a diverse student population, and our internship program strives to incorporate and emphasize diversity issues as a fundamental part of the training experience. In addition, our program incorporates a fUse of Self\$ training model, as we encourage interns to explore and understand the qualities and dynamics that he or she brings to each interpersonal encounter and how these facilitate or hinder effective interactions and interventions. For more information, please visit our web site.

Program Description

Travis County Juvenile Probation developed the psychology internship program in 2011. The program is not APA-accredited. However, the Training Committee developed a timeline with the goal of obtaining APA accreditation in 2014. The Training Committee believes the internship year offers a unique opportunity to strengthen clinical skills and gain exposure to a broad and diverse range of professional experiences. The mission of the Travis County Psychology Internship Program is to prepare interns to enter the field of psychology with the skills and training necessary to provide culturally competent, empirically supported, and clinically effective psychological services to juveniles and families. The overarching goal of the program is to prepare professionals to successfully meet the unique challenges of practicing psychology within a public agency and to ensure clinical competency in working with culturally diverse groups.

All direct care services and internship activities take place through Travis County Juvenile Probation. Interns work with youth who have been placed in the department's detention or residential facilities as well as with youth who are coming to the department to complete psychological evaluations, to participate in aftercare services, or to attend Mental Health or Drug Court.

All interns participate in two six-month rotations: the Clinical Services Rotation and the Assessment Services Rotation. The Clinical Services Rotation takes place primarily in the department's post-adjudication residential facility. While on this rotation, interns carry a caseload of 4-6 youth and families, lead group therapy sessions, engage in program development, and participate as members of an interdisciplinary team. While on the Assessment Services Rotation, interns conduct mental health assessments and psychological evaluations, participate in the County's Mental Health Court and community programming, and provide group interventions to pre-adjudicated youth.

Program Description

The Texas Child Study Center opened in September, 2008 and is a collaboration between Dell Children's Medical Center of Central Texas and the Department of Educational Psychology at the University of Texas. The internship program has been in existence since the fall of 2009. The program has a strong emphasis on empirically supported treatments and prepares interns for psychological practice with a diverse population of children and families. Interns gain experience with assessment and outpatient therapy, including experience in specialized outpatient clinics (internalizing disorders, behavioral disorders, and medical coping clinics), as well as multidisciplinary pediatric clinics (pediatric obesity, concussion), and pediatric consultation and liaison with inpatient medical teams.

Program Description

Our primary goal is to train interns for successful practice in a university counseling center or similar setting. Some of our interns also go on to work in academia and other outpatient settings. A core element integrated into all of our training activities is a focus on professionalism and the intern's ability to form effective working relationships with individuals and systems, including sensitivity and skill with diversity issues. We use a practitioner-scholar model of training, focusing on developing the following skills: initial assessment; crisis intervention; individual, couples, and group therapy; consultation; outreach and program development; academic and career counseling and education; clinical supervision. We also offer opportunities to develop competency with diverse populations, formal assessment, substance abuse treatment, applied research, administration, biofeedback, and paraprofessional training. Our agency values the internship program. The staff is highly committed and energetic toward training. Other outstanding resources include the high stipend, roomy offices, and state-of-the-art technical resources. Many members of our training staff work from an integrative or eclectic theoretical base. Other well-represented orientations include cognitive-behavioral, existential-humanistic, systems, feminist, sociocultural-systemic, psychodynamic, and relational. The typical intern workweek is 40-44 hours, with 20-24 hours in direct service provision. Other weekly activities include the following: individual supervision of clinical work and career counseling; group supervision of group therapy, and supervision; intern support group; seminars on clinical skills, assessment, diversity, and other professional issues; case conference; staff meeting; committee meetings; case staffing; and administration. Please visit our website for more detailed information, and feel free to contact us with any questions.

Program Description

Please go to our web site that describes the department and detailed information about the intern training program. The District's Home page will give information about the school district, population, and area. Website is located at: <http://www.cfisd.net/dept2/curricu/speced/psychology.htm>
The Department has adopted a Practitioner/Scholar model that complements the Scientist/Practitioner Model and strives to provide an opportunity for interns to gain practical experience through the application of curriculum knowledge to applied settings. Interns acquire experience and increasing independence in a variety of therapeutic techniques, settings and populations in a large, rapidly growing suburban, diverse school district. Interns spend 4 days in the schools (approximately 1 day each at elementary, middle, and high schools plus another day at one of those levels). Fifth day is a training/office day. Major rotations are each placement for the school year. Other core experiences include autism, crisis intervention, early childhood, presentations, and parent training. There may be additional experiences available at placements or with assigned site supervisors or other department staff. School placements include providing individual and group counseling, consultation, behavioral interventions, psychological evaluations, crisis intervention, case management, and professional presentations to district staff and students' parents. Weekly training includes at least one two-hour seminar, treatment/assessment group, and group supervision. Monthly participation with the Council of Houston Area Training Sites (CHATS) includes the APA internships in the Houston area and consists of networking and two-hour presentations rotated among the area sites. Interns may also participate in a supervised family clinic training experience serving community families.

Program Description

The APA-accredited predoctoral internship is an organized behavioral health and community service training program that provides supervised experiences in all aspects of community based counseling activities and functions. SCYFC places a strong and continuing emphasis on training activities. Internship experiences are well integrated into the agency as a whole. Training staff and previous trainees believe that SCYFC offers unique training opportunities in the following areas: 1. A family systems perspective within a community based setting. 2. A diverse client population (SES, ethnicity, religion). 3. A broad range of clinical and training activities provided by the intern's involvement in different clinical settings. 4. An opportunity to learn more about postmodern approaches, practice them, and perhaps incorporate them into their therapeutic orientation. 5. A psychological testing program that offers opportunities to enhance assessment skills with children and adolescents. 6. A democratic style of organization which provides first-hand experience in the decision-making and planning involved in a behavioral health services agency functioning. 7. An opportunity to develop supervision skills through peer consultation of fellow trainees. 8. An exceptional training facility including a large digital library, rooms designed and equipped for teamwork/live observation or supervision with two-way mirrors and digital taping. 9. A work schedule and staff support to complete a dissertation. 10. A training environment which cultivates collaboration, mutual respect, and professional development.

It is important to read our entire profile and brochure to determine if our site will be a good fit for your training goals. We welcome applicants from APA accredited graduate programs. Unfortunately, applications from students whose graduate program has a status of Accredited, on probation, with APA will not be considered for an interview. Additionally, the minimal number of intervention hours to be considered for an interview is 250. Applicants also need a minimal of 5 integrated assessments completed by the time they apply for internship. As defined by APPIC, the definition of an integrated report is a report that includes a review of history, results of an interview and at least two psychological tests from one or more of the following categories: personality measures, intellectual tests, cognitive tests, and neuropsychological tests. Please carefully review this explanation because it answers the question of what should be included in a report in order to have it satisfy the requirement of an integrated report.

Given the nature of the testing referrals we receive, at least three of the integrated reports must include a full cognitive measure, and at least one of these reports must include a full academic measure to be considered for an interview. Applicants who have experience administering and interpreting objective and projective social/emotional measures is preferred. Applicants who have not completed psychological assessments will not be considered.

Program Description

The VA North Texas Health Care System (Dallas VAMC) is the 2nd largest VA health care system in VHA. The Dallas campus is a large General Medical/ Surgical hospital with over 1,200,000+ outpatient visits per year. Interns choose 4 rotations from 15 available rotations. Rotation activities include medical/ surgical, consultation/Pain Clinic, primary care medicine, primary care mental health, homeless domiciliary, substance abuse treatment, neuropsychology, spinal cord injury, nursing home care, and PTSD (combat and military sexual trauma). During all 12 months of the training year, OEF/OIF associated rotations (Polytrauma, Trauma, and Ft. Worth OP Clinic) will need to be filled. The site also offers an APA-accredited Post-doctoral program (4 slots) in Clinical Psychology§ with an emphasis in substance abuse, Patient Aligned Care Teams (Medical Psych), or geropsych. On-site interns have been highly considered for these positions. Of the 55 staff psychologists, 38 are available as rotation and on-going psychotherapy supervisors. Supervision is at least 2 hours face-to-face weekly, plus 1 hour weekly from EBP supervisors, plus 2 hours of didactics, and 1 hour of group supervision by DOT. Nearly all past interns have passed licensing exams and have obtained either post-docs or jobs following internship. Interns will receive training in CPT, CBT, ACT, and PE and will carry three patients each half or the year, using one EBP (each six months), in addition to rotation work. Over the course of the training year, interns accrue sick leave and annual leave (totaling 13 days of annual leave and 13 days of sick leave), have 10 federal holidays, and have health and life insurance benefits. Time off to defend one's dissertation is provided along with time off to attend APA, Texas Psych Assn., or Dallas Psych. Assn. meetings. The VA North Texas Health Care System's Pre-doctoral internship was re-accredited in 2007 for the full 7 years (i.e., until 2013).

Other Application Requirements

Applicants must be current doctoral students in a counseling psychology, clinical psychology, or professional psychology program which requires an internship. It is preferred that applicants be enrolled in an APA accredited doctoral program in counseling or clinical psychology; however, non-accredited programs will be considered. Additionally, it is preferred to receive applications from students who have completed their dissertation proposal. Prior to the start of the internship, applicants must have successfully completed: A minimum equivalent of four semesters of supervised therapy practicum A course in counseling theories/psychotherapy A course in group counseling/theory and/or at least two semesters of group therapy direct service experience All other course work All qualifying/comprehensive examinations *Successful passing

Program Description

The internship is an organized health service training program that provides supervised experiences in all Counseling Center services and functions. As the only counseling center internship in the nation offered at a university primarily for women, a special opportunity is provided to focus on the issues of women throughout their adult life span. The training program is based on the conviction that professional and personal development are mutually inclusive processes. There is recognition that an internship is a critical period of transition and integration in our professional development as psychologists. The philosophy of the training program is developmental and focuses on learning and skill building through experience and understanding. The training staff is committed to providing an opportunity for interns to learn and work in an applied setting as a practitioner with a scientific foundation. This translates into a model of didactic and experiential processes which facilitate development through extensive supervision and feedback, similar to that of a mentorship. Other strengths of the program include the high value it places on issues of diversity and ethics. Additionally, interns receive extensive supervision for all training activities. Interns are also trained to provide clinical supervision to masters and doctoral level practicum students.

Program Description

BAMC's CPIP requires three years of active duty service upon licensure. There is a one year post doctoral residency available for those with dissertation completed. BAMC is located on Fort Sam Houston, within the city of San Antonio. State-of-the-art medical facility built in 1996. Teaching staff consists of twenty full-time licensed psychologists. The internship offers training in generalist skills in assessment, therapeutic intervention, and consultation. Major rotations include Military Psychology, Neuropsychology and either Clinical Health Psychology or Child and Adolescent Psychology. Military Psychology rotation provides extensive experience in triage, crisis management, evaluation and diagnosis, and treatment with active duty service members and their Families. Treatment modalities are typically short-term and problem-focused, with attention to problems associated with deployment and PTSD. Additionally interns participate in providing emergency on-call consultation. On the Clinical Health rotation, interns will be expected to acquire, refine and apply a multidisciplinary biopsychosocial model to provide psychological assessments, interventions and consultations to patients with medical conditions. Interns will principally work with primary care providers and an interdisciplinary pain management team. Child and Adolescent Psychology rotation provides assessment and treatment services to children and their Families. Frequently occurring diagnoses include attention deficit disorder, oppositional defiant disorder, and adjustment disorder. Modalities range from play therapy to behavior modification. Developmental Clinic provides the opportunity to work with an interdisciplinary team to diagnose and develop treatment plans for children with severe developmental disorders. Neuropsychology rotation will focus on the skills needed to provide brief cognitive screening as well as a more comprehensive battery of cognitive/personality functioning with active duty soldiers.

Program Description

The FCI FTW Psychology Internship Program is accredited by the APA Commission on Accreditation: APA, 750 First Street NE, Washington, DC 20002 (202)336-5979. The program is organized around the professional-practitioner model. The goal of Bureau of Prisons Pre-doctoral Psychology Internship Programs is to train entry-level professional psychologists who also function competently in the correctional environment. The training program has seven objectives. One objective is for the intern to demonstrate proficiency in conducting screening, assessment and diagnosis for a wide range of disorders and problems, using a multimodal approach, specific to the needs of the situation for individuals, groups, and/or organizations. Another objective is for the intern to demonstrate proficiency in planning and implementing a variety of evidence-based practices, including empirically supported treatments, to address mental health needs among individuals, groups and organizations. Another objective is for the intern to demonstrate proficiency in fostering and coordinating relationships with various disciplines in the correctional environment (i.e. management, correctional services, unit management and health services) by providing written and verbal communication, and professional assistance responsive to client or system needs and goals. Another objective is for the intern to demonstrate proficiency practicing psychology within the boundaries of the ethical and legal principles governing professional behavior, and to demonstrate a commitment to professional growth and development generally, and within the correctional environment specifically. Another objective is for the intern to demonstrate proficiency in understanding and applying scientific research to the practice of psychology generally, and the professional practice of psychology in corrections specifically. Another objective is for the intern to demonstrate awareness of and sensitivity to cultural factors impacting clinical services with diverse individuals, groups and communities who represent various cultural and personal backgrounds and characteristics. Another objective is for the intern to demonstrate proficiency in performing professional activities that may include providing supervision, training, conducting accountability audits and program evaluation, and/or implementation and administration of psychological services and programs both common and uncommon to the intern's specific institution. General professional training is provided half-time for the entire year. Concurrent, part-time, area of emphasis training rotations of six months are offered in behavioral medicine, psychology in corrections, drug abuse treatment, mental illness and forensic evaluation to expose interns to areas of particular interest. To further broaden the training experience, interns may have the opportunity to participate in an outplacement rotation at either FMC Carswell or FCI Seagoville.

Program Description

Fort Worth Independent School District has provided pre-doctoral professional School Psychology training for over 20 years in a culturally rich, urban setting. The internship has been accredited by APA since 1997. Direct and experiential training are provided in consultation, assessment, behavior intervention strategies, counseling, suicide and violence risk assessments, crisis intervention, ethics, legal guidelines, educational planning, and research. Interns pursue their professional interests through participation in rotations with special populations. These include students served in programs for Emotional Disturbance, AU spectrum disorders, homelessness, pregnant/parenting teens, and alternatively placed students. A broad spectrum of problems is addressed across the behavioral health, mental health, and mental retardation spectrum. Under supervision and in concert with other professionals, interns provide a realm of services including consultation, assessment, behavior management, crisis intervention, counseling, IEP meetings, and educational planning for general and special education students to promote student achievement. Various settings are available, including traditional and special schools, special education units, hospital classrooms, and school-based counseling centers. Interns collaborate with professionals from many disciplines, and they participate in didactics and supervision. The internship manual outlines specific goals and objectives consistent with APA standards, ethical guidelines, and state requirements for licensure as a Psychologist. Interns set individualized professional goals and participate in selecting their rotations. The program's goal is to move interns from student status to practicing professional colleague. The internship requires 1800 hours over 10.5 months. A 12 month, 2000 hour option is available.

Program Description

The Federal Medical Center, Carswell is the only medical and psychiatric referral center for females in the Federal Bureau of Prisons. The facility includes inpatient and outpatient mental health units, medical and ambulatory care units, a residential dual diagnosis substance abuse program, a Spanish residential substance abuse program, a trauma program, a sex offender treatment program, and all security levels including a Camp and a High Security unit. FMC Carswell has the only high security facility for females in the Federal Bureau of Prisons. The Psychology Services staff conduct intakes, assessments, forensic evaluations, group and individual therapy, crisis intervention, psychoeducational groups, staff training, and consultation with multidisciplinary teams and correctional staff. Interns are encouraged to participate in all areas. Interns are also required to supervise graduate students from local universities. For additional information, log on to: <http://www.bop.gov/jobs/students/cpdipcar2.pdf>. Elective rotations are available in the following areas: Substance Abuse, Mental Health, Forensics, Clinical Health, Trauma Treatment, Spanish Language Services, and Sex Offender Treatment. Interns select any 2 of these elective rotations and also complete a year long General Rotation. Although FMC, Carswell is a prison, prior correctional experience is not mandatory. However, it is seen as a strength in an application. We only accept applications from APA accredited doctoral programs.

Program Description

The Texas Juvenile Justice Department operates high-security facilities housing youth adjudicated for felonies against persons such as Murder, Aggravated Robbery, and Aggravated Sexual Assault. Many have psychiatric needs and/or difficulties due to traumatic backgrounds. Many require specialized treatment in one or more of the following: alcohol and other drugs, sexual behavior, or capital & violent offending. Interns begin with mastering basic assessment and intervention skills before rotating through the specialized treatment programs. By the end of their internship experience, they should be prepared to conduct forensic evaluations and testify in court if required.

Program Description

The Psychology Internship Program at the VA Texas Valley Coastal Bend Health Care System offers 2 General Psychology and 1 Health Psychology internship position to US citizens who are pursuing a doctoral degree in clinical or counseling psychology from APA-accredited institutions. Our philosophy is that all practicing psychologists should have a solid foundation in general Clinical Psychology, including the ability to apply empirical data to clinical procedures. Within this framework, the Psychology Internship Program provides a well-rounded year of training in general Clinical Psychology and evidence-based practice. All interns are required to obtain general training in a variety of assessments and interventions across an array of Veteran populations. Rotations are designed to enable broad exposure to various diagnostic, cultural, and age groups complemented by brief training experiences which allow for more focused training in the Intern's area of interest.

Program Description

An internship at The CAC is a 12 month, full-time training program for advanced pre-doctoral students in Clinical and Counseling Psychology. Interns receive supervised experience in psychotherapy with clients (age toddlers through adults) experiencing a wide variety of disorders, psychological assessment, diagnosis and treatment planning, case management, forensic work, research, didactic instruction, consultation, and group supervision. In addition to developing clinical skills, this internship site seeks to assist the intern regarding the development of a professional identity. To that end, interns are encouraged to participate in educational seminars, conferences, and community outreach endeavors. One of the primary goals of The Center is to promote the complete healing of child victims of sexual abuse, as well as their families. Once sexual abuse has been substantiated, children needing therapeutic treatment or psychological testing are referred to The Children's Assessment Center's Therapy and Psychological Services Department, which is comprised of two full-time Ph.D. level psychologists, eight full-time Masters level therapists, three full-time Masters level clinical social workers, one Post-doctoral Fellow in Psychology, and twelve additional contract professionals from both levels. The Center's Therapy and Psychological Services team is instrumental in caring for the children's emotional needs. The program offers on-site and community-based therapy, psychological assessment, and psychiatric evaluation to child victims and their family members to assist them throughout the healing process. Using a holistic approach, the Therapy and Psychological Services Department works with the entire family, offering various types of therapies conducted by professionals from several disciplines whose interventions are guided by a variety of theoretical orientations to assist sexually abused children, their siblings, and non-offending caregivers.

Program Description

The APA-accredited Clinical Psychology Internship Program at Baylor College of Medicine provides broad-based training within a scientist-practitioner model. Through a competency-based approach to training, the program prepares students for subsequent certification and/or licensure as psychologists. The program offers 5 training tracks: 1) Ben Taub Hospital - Adult Psychology Track (2 positions), 2) DePelchin Children's Center - Child/Family Psychology Track (2 positions), 3) Geriatric Mental Health Care & Research Track (1 position), 4) Texas Children's Hospital - Pediatric Psychology Track (2 positions), and 5) The Menninger Clinic - Adult/Adolescent Psychology Track (1 position). Please reference our website (<http://www.bcm.edu/psychiatry/psychology-internship>) for specific information about the training experiences offered in each track. All interns also participate in core program activities. Interns provide individual psychotherapy through a community mental health clinic and Baylor College of Medicine's student counseling service. Interns also gain experience through a research secondary rotation and learn through program didactics.

Program Description

The Houston Independent School District Internship Program provides an array of experiences in the general areas of pediatric, child and adolescent mental health; consultation; developmental/learning disabilities; individual and school-wide crisis intervention. The HISD "Psychology in the Schools" approach uses the Practitioner-Scholar model and emphasizes the integration of empirical knowledge and data with clinical practice. Interns are prepared for academia, school psychology, and public and private clinical practice. Cultural competence is emphasized. The HISD Psychology Internship Program training experience adheres to the Texas State Board of Examiners of Psychologists' criteria for licensure. Psychology interns are assigned to a specific staff psychologist for professional supervision. Training assignments are rotated every semester so that the intern gains experience in varied treatment approaches and intervention techniques with different supervisors. Experiences include providing psychological services to students, parents, teachers, administrators, and other school personnel. Interns are required to participate in weekly seminars and monthly case conferences to allow the intern an opportunity to present cases, to describe treatment plans, and to receive feedback. As a result, interns develop insight into how other professional staff conceptualize and deliver services. Interns are encouraged to attend outside workshops and professional meetings. They are also strongly encouraged to join APA and participate in professional organizations. Applicants should be candidates in doctoral programs in School, Clinical, or Counseling Psychology, and should have completed appropriate coursework, comprehensive exams, and supervised practica with child and adolescent populations. The internship is for one calendar year starting in August, and requires a minimum of 1600 supervised hours, and carries a stipend of no less than \$29,500.

Program Description

2000-hour APA accredited* internship dedicated to training culturally sensitive and competent generalists. Interns work with a culturally diverse population conducting individual, couples, and group therapy; initial consultations; crisis intervention; assessment; outreach, and consultation. Client issues range from adjustment and developmental concerns to more serious mental illness. As such, program graduates have obtained post-internship employment in a wide range of settings, including university counseling centers, private practice, community mental health, hospitals, correctional facilities, and university teaching / research. Please see www.uh.edu/caps for regularly updated program information. *The CAPS internship in professional psychology has been continuously accredited by the American Psychological Association (APA) since 1988. The term accredited provides public notification that the CAPS internship program meets standards of quality set forth by the APA Commission on Accreditation. For information regarding accreditation contact: Office of Program Consultation and Accreditation, American Psychological Association, 750 First Street, NE Washington, DC 20002-4242, (202) 336-5979.

Program Description

The Psychology Pre-Doctoral Internship Program is based on a scholar-practitioner model and is a generalist training program designed to provide interns with a broad range of clinical experiences. Interns are expected to engage in clinical training 80% of their time and be engaged in didactics/scholarly inquiry 20% of the time. Our philosophy reflects a scholar/practitioner model with the goal of providing interns with the most up-to-date knowledge, skill, and interventions for a rapidly changing health care arena. Training is dedicated to a quest for scholarly inquiry and professional problem solving, with supervisors serving as mentors to the interns. The goal of the Psychology Internship Program is to prepare interns for the practice of professional psychology in a variety of settings with a particular emphasis on preparation for VA and other medical settings. It is our mission to assist interns, not only in the acquisition of a range of professional skills, but in the development of a professional identity and role. Training objectives include developing a broad range of competencies in (1) psychological assessment, (2) psychological interventions including empirically supported treatments, (3) strategies of scholarly/empirical inquiry, (4) consultation, program evaluation, and supervision, (5) professional issues and conduct, and (6) sensitivity to cultural and individual diversity. Interns will demonstrate competence expected of an entry level professional in providing direct clinical services, including individual therapy, group therapy, psychiatric and neuropsychological assessment, case management, treatment planning, patient education, relaxation and stress-management training, and vocational screening. Additional clinical experiences may include: alcohol/substance abuse treatment, biofeedback, couples and family therapy, forensic psychology, geropsychology treatment, sex offender treatment, and rehabilitation psychology.

Program Description

The mission of the Texas Children's Hospital Psychology Internship is to advance the profession of psychology and maximize child health outcomes through exemplary training in individualized evidence-based practices of psychology. Our psychology internship program provides broad-based clinical training - with an emphasis in pediatric/child populations - that will prepare emerging psychologists for productive and meaningful careers in a variety of contexts. As part of our mission, we are committed to providing the foundations for successful post-doctoral specialization in the fields of pediatric psychology, clinical child and adolescent psychology, and pediatric neuropsychology. Our faculty aspires to train highly competent professionals who will uphold a strong commitment to scientist practitioner values, demonstrate sensitivity and responsiveness to developmental considerations and individual differences, and be effective at contextually-relevant care as well as interdisciplinary teamwork. Our patient population is racially, ethnically, and linguistically diverse, providing interns with experiential training in delivering services to families from a broad range of backgrounds. The training year is divided into two six-month major rotations and two six-month minor rotations as well as some opportunity for year-long experiences. This structure provides for both depth and breadth of clinical training and allows the program to individualize an intern's training year. MAJOR ROTATIONS: 1) Pediatric Neuropsychology, 2) Pediatric Health Psychology, 3) Anxiety Disorders, 4) AD/HD & Disruptive Behavior Disorders, 5) Autism Center MINOR ROTATIONS: 1) Brief Behavior Intervention, 2) Family STARS intervention, 3) Primary Care Psychology, 4) Anxiety Disorders, 5) Autism Center, 6) Pediatric Health Psychology, 7) Learning Disabilities Evaluation & Consultation, 8) Pediatric Neuropsychology, 9) Diagnostic Interviewing, 10) Research Rotation

Program Description

The client population at Harris County Juvenile Probation Department is comprised of youth with diverse socioeconomic backgrounds, ethnicities, ages, and diagnoses. Recipients of mental health services are children ages 10 to 17 years who are involved in the juvenile justice system. The primary emphasis of the internship program is assessment-focused. Our department provides general psychological evaluations, as well as more forensically oriented evaluations. However, training is also available in crisis intervention with youth and parents, individual and group therapy with the youth, and consultation with various juvenile justice staff. The primary site will be the Juvenile Justice Center in Houston, Texas, which houses approximately 250 youth. However, occasional services provided by interns may be conducted at a number of different sites in Houston, allowing collaboration with probation and detention center staff, attorneys, psychiatrists, and mental health providers. Detailed information about the Harris County Juvenile Probation Department is available at: www.hcjpd.org. Interns must pass a criminal background check before starting employment.

Credal Oath Required: Yes

Other Application Requirements

Coursework complete, dissertation at or near completion. Applicant must qualify & accept commission as a Captain in the USAF to be eligible for this internship.

Program Description

Program Description (for online use): Emphasis upon intervention and assessment practices that are well-supported by empirical literature. Extensive experience in behavioral and cognitive behavioral strategies. In addition to traditional training in assessment and therapy, we offer state of the art programs in health psychology, primary care consultation and evidence-based treatment for PTSD (Prolonged Exposure & Cognitive Processing Therapy). Interns learn neuropsych screening & assessment strategies essential for work with individuals at risk for post-traumatic head injury. They gain invaluable experience in crisis intervention and triage, provide psychological consultation to organizational leadership regarding fitness for duty of individual military members as well as provide prevention and outreach programs in a community psychology context. The program's Research Seminar provides exposure to conducting clinical research in a military setting as well as highlights critical issues in applied clinical research.

Program Description

Psychological Services in the Lewisville Independent School District provides a competency-based, full-time psychology internship of 2000 hours, accredited by the American Psychological Association (APA). Assessment, consultation, counseling, intervention, alternative education settings, programming for children with autism and neuropsychology in the schools are offered. The internship experience is designed to meet the needs of pre-doctoral psychology students. Broad-based experiential training and qualified supervision by licensed psychologists are the cornerstones of this program. Emphasis is placed upon the development of skills in a number of areas most commonly expected of the professional psychologist in the public school setting. The internship program is consistent with APA standards while striving to accommodate the specific training objectives of individual interns.

- 1) therapy for sexual assault/sexual abuse
- 2) specialization in sexual orientation & gender identity services
- 3) specialization in providing clinical supervision
- 4) therapy for eating disorders
- 5) couples counseling with live observation team approach

Rotation offerings are subject to change based on staff availability.

Professional development activities throughout the year include attending Texas Counseling Center Intern Conference and attendance at local professional workshops (dependent on available funding). Interns are also given additional professional development leave (5 days) for either job interviews, conference attendance, and/or dissertation-related work. Additional professional development leave time can be accrued through after-hours outreach or other activities.

*Questions on the program's accredited status should be directed to: Office of Program Consultation and Accreditation American Psychological Association 750 1st Street, NE, Washington, DC 20002 Phone: (202) 336-5979

Other Application Requirements**Program Description**

Required training activities include supervised experience in individual, couples and group therapy; training in provision of supervision to practicum students; two integrated assessments; opportunities for crisis intervention (on-call and walk-in coverage); participation in weekly supervision of supervision and weekly training seminar (clinical issues / professional issues / diversity / outreach); participation in psychoeducational outreach presentations and events; coordinating or co-coordinating a large outreach event; participation in staff and intern case seminars; participation in weekly staff meetings; learning program development through outreach training.

In addition to these general training activities, optional rotations are available. External on-campus rotation currently includes: 1) intensive outpatient group therapy for substance dependence recovery. Internal rotations currently include:

psychologist consultants who offer training seminars that have included the following: cultural and ethnic diversity, research methods and outcome findings, and specialized methods of assessment and intervention. Although the internships primary emphasis is experiential development of clinical skills, both the institution and the training staff provide encouragement, opportunity, and support for research inquiry.

Program Description

Mexia State Supported Living Center currently operates two specialized treatment units for offenders with cognitive disabilities. The male individuals in these units, adult and juvenile, have been charged with criminal offenses. Many have multiple diagnoses including a psychiatric disorder and a substance abuse problem in addition to intellectual and developmental disabilities. They are either involuntarily committed by the justice system, or they are referred for assessments to determine their eligibility for commitment. Individual and group counseling following a CBT model as well as behavior intervention is incorporated into the treatment approach. Rotations include functioning as a caseload psychologist on the juvenile and adult forensic units as well as completing intake and admissions evaluations. Interns will also write behavior support plans, complete functional and behavioral assessments, assist with psychological evaluations and provide individual and group counseling.

Program Description

The UT Dallas internship program utilizes a Practitioner model of training, emphasizing clinical practice and service delivery with the goal of creating ethical and culturally competent generalist practitioners. We use a developmental approach to facilitate the transition from graduate student to professional psychologist. Training is focused on facilitating interns' clinical competence, fostering the development of professional judgment, and enriching interns' scientific and practice-based knowledge. Enhancement of multicultural competence is interwoven into all facets of the training program, reflecting the strong value we place on honoring the diversity and uniqueness of every individual. We are deeply committed to facilitating the integration of interns' personal and professional identities through engaging them in supportive, yet challenging supervisory and mentoring relationships. Additionally, the internship program is based largely on a relational, fuse of self training model, as we believe optimal professional development occurs within the context of self-reflection and personal exploration. The Pre-doctoral Internship at the University of Texas at Dallas has four overarching goals, which reflect our training philosophy. Goal 1: To facilitate interns' clinical competence as generalist practitioners, with an emphasis on counseling center practice. Goal 2: To foster interns' ethical practices and professionalism. Goal 3: To enhance interns' awareness, sensitivity, and skills in working professionally with diverse individuals, groups and communities who represent various cultural and personal backgrounds and characteristics (e.g. cultural, individual, and role differences, including those based on age, gender, gender identity, race, ethnicity, culture, national origin, religion/spirituality, sexual orientation, disability, size, language, and sex status). Goal 4: To facilitate the integration of interns' personal and professional identities.

Program Description

*** INFORMATION MAY BE OUTDATED. PLEASE CONTACT PROGRAM DIRECTLY FOR INFORMATION.***The Central Texas Internship in Clinical and Forensic Psychology provides a broad-based internship training program in the clinical and forensic arenas that includes supervised experiences in the following areas: intake procedures, psychological, psychosexual, and forensic risk assessment, individual treatment planning, individual and group therapy with adolescents, family therapy, crisis intervention, and other therapeutic intervention activities. The program has some room to individually tailor activities for each intern to reflect his or her interests, skills, training needs, and professional goals. The major goal of the program is to provide an integrated, individually tailored, and coordinated series of learning experiences that provide interns opportunities to (a) practice and expand previously held knowledge and learned skills, (b) develop new knowledge and skills, and (c) experience personal growth and professional development. Interns are challenged to refine their theoretical knowledge and broaden their clinical skills in their work with psychologists, legal, and educational professionals. Through their work with supervisors and staff, the interns gain knowledge and experience in different theoretical orientations, approaches, and assessment and treatment models. The program prepares interns to deal with a wide variety of clinical and professional situations they will encounter as professionals working with adolescents in a clinical and forensic population.

Program Description

We provide scientist-practitioner model training in clinical psychology practiced in a medical school-affiliated VA medical center setting. Our goal is to train psychologists who assume professional positions in public sector medical center settings such as VAs, medical schools, state hospitals, community hospitals, and correctional facilities. Research skills and knowledge are emphasized and our graduates should be well-equipped to be critical consumers and producers of clinically-relevant psychological research. Applicants with primary career goals in child/adolescent issues, family therapy or long-term outpatient psychotherapy (private practice) will find many other programs better suited to their needs. We offer training in General Clinical Psychology (1 slot) and General Clinical Psychology training in four specialty-focus areas including: Primary Care/Health Psychology (1 slot), Trauma (1 slot), Geropsychology (1 slot) and Neuropsychology (1 slot). Applicants can apply for multiple areas. All interns are required to follow one intensively-supervised psychotherapy case throughout the year. Interns are generally free to choose which supervisors and clinical rotations they prefer after meeting with the faculty during orientation week. Regardless of the area selected, all interns receive training and supervision in psychological assessment, interprofessional consultation, group and individual psychotherapy, research techniques and scientific writing, teaching and supervision skills, career planning and administration, and ethics, law, and diversity issues. A large percentage of our patient population is Hispanic. Therefore, we encourage applications from students who have experience with diversity issues. We usually select our own specialty-focus track interns for our APA-approved Postdoctoral Programs in Primary Care/Health, Trauma Psychology, and Palliative Care Psychology. Neuropsychology postdocs are recruited nationally.

Program Description

Historically, our program has supported the scientist-practitioner model, with an emphasis on the practitioner side of the Boulder model. More recently, we have added opportunities for training in evidence-based assessment and treatment approaches. To accomplish this end we have adopted generalist training involving a full array of patients (children, adolescents, adults) seen in diverse treatment settings (inpatient, outpatient, ER and community organizations) receiving a full spectrum of psychological evaluations (interview and test based) and interventions (individual and group) under intensive supervision. There is an emphasis within this training model of experiential learning (with experienced psychologist role models) within a research-science framework. Experiential training is supported by weekly seminars and didactic trainings designed to enhance the trainee's understanding of the scientist-practitioner model, evidence-based practice, integrative assessment, and ethics/diversity. Our trainees also have opportunities for joint didactic trainings with psychiatry residents.

Program Description

The Mental Health Assessment and Triage Unit (MHAT) Residency offers a 12 month, 2000 hour training program for psychology doctoral students in a juvenile probation setting. The goals of this training program are to provide supervised training and expertise to pre-doctoral residents in the areas of assessment, consultation, individual, family, & group psychotherapy with a particular focus on adolescents & juvenile probationers. Residents spend roughly 50% of their clinical time conducting, scoring, & writing up psychological assessments w/ youth who have been ordered into residential placement. The other 50% of time is spent in consultation, leading short-term theme, process, & experiential groups, & carrying a weekly individual/family caseload between 2-4 cases. Through their clinical activities, Residents provide a minimum of 10 direct, face-to-face clinical contact hours per week. A minimum of 3 hours of direct, face-to-face supervision is provided weekly, & a weekly 2 hour didactic seminar is held to provide Residents with a structured training experience. Residents rotate monthly between consultation services, the ROPES Challenge Program, & the Weekend Program. Consultation services include working with probation officers for diagnostic clarification, providing recommendations for youth, conducting structured interviews w/ youth, & writing up summaries for probation officers. The ROPES Program offers the opportunity for Residents to participate in high & low element team building activities with youth on an outdoor course & co-facilitate process groups based on experiential activities. The Weekend Program is a new program designed to deter youth from residential placement. The Resident working with the Weekend Program will co-facilitate themed, process, & structured groups, with the expectation of leading groups independently through the course of the year. During the Weekend Program rotation, the Resident will work 4 consecutive Saturdays.

Program Description

The facility offers comprehensive psychological and neuropsychological assessment, programs for patients with co-occurring psychiatric and substance use disorders, and treatment including a full range of rehabilitation therapies, education, individual and group psychotherapy, and family intervention. The hospital also utilizes psychoactive medication as part of the treatment regimen and provides care to both adolescents and adults. The pre-doctoral internship training program consists of assignment of the trainee to the Psychology Department to assist the supervising psychologists on staff in all aspects of their duties. The pre-doctoral intern will devote four months of his/her internship time on the Adult Acute Inpatient Service, four months on the Adolescent Unit and four months on the Forensic Management Unit. The training program includes the intern's participation and gradually increased responsibility under careful, direct clinical supervision. The trainee will join doctoral psychologists in individual clinical interviews and group therapy sessions and later conduct interviews and sessions without direct observation. The trainee will also administer assessment batteries and write integrative reports under the supervision of the rotation supervisor. The trainee will provide feedback to the treatment teams and will complete group and individual therapy notes. They will also gain experience with an electronic clinical record which is now being used throughout the Texas Department of State Health Services. Didactic training will be conducted at least 2 hours per week with presentations by various hospital staff members, guest presenters, and supplemented by Grand Rounds from the Psychiatry Department, University of Texas Health Science Center at San Antonio. The supervising staff has a variety of theoretical orientations to expose the interns to a range of approaches.

Background checks for criminal history and sexual exploitation of clients must be passed by each intern matched to our program.

Program Description

The Texas State internship program is designed to prepare interns to function as generalist psychologists by providing them with broad skills that are applicable in a variety of outpatient settings. Training at the Texas State Counseling Center is based on the belief that a competent practitioner in the field of psychology should be guided by knowledge of clinical theory and applied research, awareness of ethical/legal/professional standards of practice, sensitivity to individual differences within a diverse society, and openness to lifelong learning. We incorporate this philosophy into our training program through the use of a practitioner-apprenticeship training model in which didactic and experiential learning are combined. The content and training methods of the Texas State internship program are determined by the following overarching goals: To provide training and opportunities for skill development in the areas of counseling/psychotherapy, crisis intervention, assessment, psychoeducational programming, consultation and supervision. To promote knowledge and understanding of the impact of cultural issues and individual differences in working with diverse clients and colleagues. To facilitate interns' professionalism and integration of ethical/legal/professional standards into all areas of practice. To assist interns in the process of developing a professional identity as a psychologist.

Program Description

The educational philosophy and training model of The Applied Psychology Group of Texoma Predoctoral Internship Program is to provide training grounded in the scientific principles of our profession that emphasize the area of applied practice. The overarching objective of the predoctoral training program is to train ethical, competent psychologists who are capable of functioning independently and will contribute both to the welfare of society and to the profession. The training staff realizes that the most important learning occurs through providing service under the direct supervision and mentorship of a senior staff professional. This model is enriched through predoctoral seminar, emphasis area activities, clinical work, consultations, and staff development activities. The Applied Psychology Group of Texoma offers a predoctoral psychology internship training program for eligible doctoral candidates from a variety of practitioner based psychology programs. The internship is designed to meet APPIC standards for internship programs. The psychology internship is either a full-time, 40 – 55 hours per week, 50 week year position. Each full-time predoctoral intern will accrue 2000 hours of supervised experience, which will meet the predoctoral professional experience requirements for licensure in all licensing jurisdictions. The internship is an organized training program designed to provide interns with a planned, programmed sequence of training experiences with the primary focus on assuring breadth and quality of training. The internship provides training in a broad range of psychological assessment and intervention activities divided into two training tracks. The assessment track primarily focuses upon psychological and neuropsychological assessment, with students being required to carry a small therapy case load. The assessment track requires applicants to have a strong background in assessment with some experience in neuropsychological evaluation and interpretation. The second track is therapy focused, which requires a Master's degree in psychology for application to this track and illegibility for Texas licensure as a Licensed Psychological Associate by the beginning of internship. The therapy track focuses upon direct delivery of therapeutic services to a clientele with a wide variety of, with some additional training in psychological assessment. All applicants should clearly state which track, assessment or therapy, to which they are applying.

Program Description

Scott & White Healthcare is a non-profit, multispecialty academic medical center affiliated with the Texas A&M University (TAMU) Health Science Center (HSC) and is one of the largest multi-specialty group practices in the United States and the largest in the state of Texas. Scott & White's mission is to provide the most personalized, comprehensive and highest quality health care, enhanced by medical education and research. TAMU HSC is committed to preparing healthcare workforce that meets the needs of Texans. TAMU HSC training programs provide the competencies vital to staff, design and provide the healthcare needs of the increasingly diverse population of Texans.

Scott & White is consistently recognized on a national basis, earning the Thomson 100 Top Hospitals® in American designation for achieving excellence in quality of care eight times. Scott & White now provides for the health care needs of the majority of Central Texans. An integrated healthcare model, the system provides 2.5 million outpatient visits, 53,419 hospital discharges, and 44,627 surgical procedures per year. The Scott & White network includes facilities (clinics & hospitals) covering 29,000 square miles of Central Texas including: a 636-bed specialty care/teaching hospital, Level-I Trauma Center, McLane Children's Hospital (112 beds including 48 NICU), 50-bed long term care hospital in Temple, 13 additional hospitals/partners, and over 70 primary care and specialty clinics. Scott & White employs more than 14,000 people including 1,200 physicians and scientists. The system contributes more than \$328 million annually in combined community benefits: \$143 million charity care, \$101.9 million Medicare/unreimbursed costs of care, \$43.5 million education, \$9.2 million research, \$27.5 million subsidized services, \$3 million community health improvement services, and thousands of volunteer hours in medical and community activities. S&W is uniquely qualified to sponsor such a training program given its national reputation as one of the largest integrated healthcare systems in the United States.

There is a need for training and retention of professional psychologists in the state of Texas, particularly in medically underserved areas. The purpose of the Scott and White Psychology Internship Program (S&W PIP) is to increase the access to psychological services for Texans in rural and medically underserved areas within the S&W integrated Healthcare System service area. According to the Texas A&M University's Southwest Rural Health Research Center, State Offices of Rural Health have identified suicide, stress, depression, and anxiety disorders, and lack of access to mental and behavioral health care, as major rural health issues. Establishment of S&W PIP expanded the psychological services to those underserved populations.

<emsp>Mission of the S&W PIP is to provide broad-based clinical training. Some specializations can be arranged appropriately to the interests and training needs of the resident (e.g., Clinical Child/Pediatric Psychology, Rural Mental Health Psychology, and Rural Health Psychology). Interns considering a variety of areas and types of professional psychology practice are prepared for entry-level positions or post-doctoral supervised professional experience generally required for licensure in the areas of: general clinical psychology, primary care psychology, clinical child psychology, and health psychology. Another objective is to develop and refine an intern's knowledge of normal development, psychopathology and psychosocial problems, so that a resident can better assess, diagnose/treat diverse populations across settings.

<emsp>This professional psychology training program is committed to the development and expansion of competence in the field of professional psychology and pursuit of licensure as a Psychologist in the state of Texas. Training takes place in a supportive manner so it becomes an integrated part of the S&W PIP community of professional support. The program allows professional learning to evolve at an optimal pace, by incorporating graduated, sequential training drawn on the scientific basis of psychology. Since interns bring their own unique competencies, the program's task is to build upon these existing skills.

<emsp>The Internship provides a balanced set of clinical experience within the S&W Healthcare System. Of special note, the interns have the opportunity to collaborate with professionals from other disciplines including: Family Medicine, Pediatrics, Internal Medicine, Psychiatry, Child and Adolescent Psychiatry, Licensed Professional Counselors, Licensed Clinical Social Workers, Psychiatry Nurses, Physician Assistants, Clinical Nurse Practitioners, Occupational Therapists, Recreational Therapists, and Certified Peer Specialists. This illustrates the emphasis on building supportive professional communities and working closely with interns as members of a team.

Throughout the past 20 years, S&W has obtained over 13 hospitals, 70 clinics and is the main campus for the Texas A&M Health Science Center College of Medicine. S&W's mission is to provide most personalized, comprehensive, and highest quality health care, enhanced by medical education and research by its affiliation with Texas A & M University Health Science Center. Located in the center of Central Texas, S&W has been dedicated to provision of healthcare services to Texans in rural areas. S&W PIP also prepares psychologists to serve aspects of the underserved population and prepare them for continued provision of psychological services to the aforementioned high need consumers of mental health services.

This includes desired minimums of 200 assessment and 400 intervention hours, with consideration given to an applicant's overall training background and fit with the program. (See brochure for more information).	

Program Description

CTVHCS offers training in a variety of contexts including general medical/surgical hospital, psychiatric inpatient, a domiciliary, integrated and home-based primary care, and multiple outpatient clinics. Please see our web brochure for further description of the training opportunities within each setting. Our program places 6 interns annually, two at each of its three primary training sites: Temple and Waco VA Medical Centers, and the large Austin VA outpatient clinic. Our training model is "reflective-practitioner", which is a form of scholar-practitioner training. We emphasize the value of reflecting on professional practices through intensive case study, locating and incorporating relevant scientific/professional knowledge and seeking experiential wisdom. Our program focuses on the development of competency in 15 professional domains, based on the APA model for competency benchmarks in professional psychology. We have been continuously accredited by the APA for over 30 years. Our program was re-accredited for seven years in 2011. The internship year is divided into three, four-month major rotations. Interns spend a minimum of 28 hours per week on the major rotation. We offer major rotations in outpatient mental health clinics, inpatient psychiatry, substance abuse treatment, rehabilitation and reintegration (domiciliary), integrated primary care, residential and outpatient PTSD, family program, neuropsychology and rehabilitation. Please see our brochure for a complete listing. We offer opportunities to pursue specialized professional competencies via minor rotations for 4 to 8 hours per week (e.g. military sexual trauma, neuropsychological assessment, clinical research, assessment, group therapy, serious mental illness (SMI), compensation & pension exams, blind rehabilitation, training and program development, etc.). We have approximately 65 licensed full-time psychologists on staff between our training sites, as well as a number of recent graduates who are in the process of becoming licensed.

In accordance with Utah State Code 53A-3-410 and Southern Utah University policy, appointment to this position is contingent upon the successful passing of a background check. For more information, please see <http://suu.edu/pub/policies/pdf/PP529Criminal.pdf>

Program Description

The doctoral internship at Southern Utah University provides generalist training in individual, couples, and group therapy; psychological assessment, outreach and consultation. Interns may pursue specialized training in a variety of other areas including career counseling, outreach, and biofeedback. Interns also have opportunities to collaborate with a number of university offices including University Housing, SUU Athletics, and Career and Professional Development. Please see <http://suu.edu/ss/caps/training.html> for more information.

Program Description

USU CAPS doctoral internship provides quality training focused on eight basic areas of psychological practice important in a university counseling center or similar setting: individual therapy; group therapy; psycho-educational and psychological assessment; outreach and consultation activities; providing clinical supervision; awareness of and responsiveness to diversity issues; ethical and professional behavior; and professional development. While interns at CAPS are expected to function semi-autonomously, they can also expect to work and learn in an atmosphere characterized by respect and support. Overall, the goal of our internship is to create mentoring relationships and a learning environment in which interns can hone their skills and grow professionally in a safe and supervised setting. In addition to a number of required core experiences, our training allows an intern flexibility in choosing elective experiences consistent with his or her professional goals. Through the outreach consultation and professional development projects, interns have the opportunity to customize their internship. Coordinating these two projects, an intern can create a specialty rotation or focal area. Please see our webpage at <http://www.usu.edu/counseling> for a complete description of the program.

Program Description

The pre-doctoral internship at UVU prepares the intern for competent and ethical practice as a generalist psychologist. A variety of training opportunities are provided with an emphasis in individual, couples, and group therapy, psychological assessment, and crisis intervention. Tailoring the internship to meet the goals and needs of interns is a priority and opportunities to meet these needs can include teaching, research, specific modality training, outreach, community resource consultation, and didactic trainings. For online information see: <http://www.uvu.edu/studenthealth/mental/appic/>

Program Description

The internship at BYU trains generalists in a supportive atmosphere where interns' training needs are the priority. Interns are involved in the full range of services offered by a comprehensive university counseling center serving a student body of over 32,000. Emphasis on individual, couples and group therapy; crisis intervention; outreach and consultation; psychological assessment; integrating spiritual issues in therapy; and meeting interns' individual training goals. Training and experience in multicultural counseling are addressed through case assignment, supervision, consultation, and didactic training. Twenty-six licensed psychologists offer a wide range of theoretical orientations in supervision and didactic training. Minor rotations are offered in Campus Housing, Women's Services and Resources, Biofeedback Training, Group Treatment for Anxiety Disorders, Career Services, teaching career development courses, and Counseling Center Administration. Interns are provided four hours per week to complete dissertation or work on other research. The Center has a well-established therapy outcomes research program and interns may select a research rotation with one of the Center's research teams.

Program Description

The Internship Program in Clinical Psychology is a formal training program whose intent is to prepare students who wish to go on to Postdoctoral Fellowships. Training occurs on a campus whose primary focus is the treatment of persons who are identified as severely mentally ill (SMI). The primary method of training is experiential. Interns are provided with a graded sequence of experiences, with increasing levels of responsibility commensurate with the intern's demonstrated competency and comfort. The internship is deliberately structured to provide supervised exposure to working with patients of different ages, backgrounds and ethnicity, with a diversity of presenting problems, representing a wide variety of severity. The internship begins with approximately three weeks of training and orientation, after which formal rotations begin. Each of three consecutive rotations spans approximately 16 weeks. Interns also conduct individual and group therapy throughout the internship year. Each intern will work with at least one adult patient in long-term individual psychotherapy, as well as with at least one child providing cognitive remediation and/or other interventions. It is expected that Dialectical Behavior Therapy (DBT) will be used with one of the individual psychotherapy cases. The supervisor serves as a role model to challenge and guide, as well as to enhance skills needed to meet clinical demands. The intern is expected to translate graduate training into real world clinical performance. As part of the requirements for successful completion, interns deliver two clinical-academic case presentations. The case presentations allow the intern to demonstrate skills in clinical formulation. Interns are also assisted in professional development by an ancillary staff of nationally recognized 2+ hours per week of individual supervision and two hours per week of group supervision. Interns are required to apply continuous outcome measures throughout the therapeutic process in order to track progress and to become oriented to a culture of clinical accountability. In an effort to provide diversity of thought and professional interaction, interns are required to maintain regular contact with other professionals within the organization for consultation and case conferencing regarding preferred patient care. Didactic training (2 hrs/wk) includes a wide variety of technical and practical subjects important to psychologists in a community mental health organization. Didactic education faculty includes a number of psychologists and psychiatrists on the WMH staff and within a variety of community settings who are known for their knowledge and experience in specific subject areas. Post-Doctoral Residency is possible.

Program Description

The internship is in a multidisciplinary out-patient environment serving all age groups in a community mental health organization. The training program is based on a local clinical-scientist model. Interns serve in several clinical settings rotating throughout a weekly schedule in adult and youth outpatient, including direct therapy and psychological evaluation/assessment. Training opportunities include a wide variety of therapeutic interventions: disability, neuropsychological, parental fitness and general psychological evaluations. In addition to offering educational and experiential opportunities for treatment of acute and chronic Axis I disorders, opportunities are also readily available for working with Axis II disorders, adult domestic violence, and juvenile sex offenders. Interns are encouraged to develop treatment methods in individual, group, and family interventions. Supervision includes

Program Description

The Children's Center provides mental health services for families with infants, toddlers, and preschool aged children who are experiencing behavioral and emotional problems. Interns gain exposure to a breadth of psychiatric disorders ranging from ADHD, to Anxiety and Depression. The children have typically experienced high levels of trauma in their young lives. We also work with families whose children are diagnosed with autism spectrum disorders. The Center provides a range of treatment including a therapeutic preschool program, parent-child psychotherapy, and trauma work with young children. The treatment modality is relationship based and the application of attachment theory to clinical practice is emphasized. In addition, The Children's Center is the recipient of a SAMHSA grant enabling us to be partners with the National Child Traumatic Stress Network (NCTSN). As a result interns will have the opportunity to be trained in the use of TF-CBT and Child Parent Psychotherapy (CPP) with a preschool population. These evidenced based practices are essential tools for anyone working with families with very young children. Interns receive intensive supervision and effectively learn how to conduct comprehensive psychological evaluations on infants, toddlers and preschool aged children. By the conclusion of the internship, students will have learned to diagnose and treat most of the DSM disorders impacting young children. The internship placement is ideal for students planning a career that focuses on early intervention and treatment with infants, toddlers, and preschoolers.

Program Description

UNI is a 150-bed full-service psychiatric hospital providing inpatient, day-treatment and intensive outpatient services for children, adolescents and adults. The internship program's primary goal is to provide high quality training that prepares interns for the practice of professional psychology. The internship program trains doctoral level clinical, counseling, and school psychology students in accordance with a practitioner model. The internship provides intensive experiential training in the core areas of psychology practice including diagnosis and assessment, therapeutic intervention, crisis intervention, consultation, and scholarly inquiry. Interns also gain direct experience with the hospital practice of psychology and are exposed to matters of professional practice. Over the 12 months, interns participate in three rotations: youth inpatient, adult inpatient and youth day treatment. This rotation system affords the intern the opportunity for a comprehensive training experience with severe and diverse psychopathology across the developmental continuum, exposure to numerous treatment modalities and assessment techniques as well as a variety of supervisors/mentors. The training experience is primarily experiential and developmentally structured in terms of sequence, intensity, duration, and frequency. Training activities include individual supervision, group supervision, weekly didactic training, weekly psychotherapy seminar, multidisciplinary treatment team staffings, psychology staff meetings, and continuing education opportunities. All training occurs in an atmosphere of modeling, mentoring, and collaborative interaction with the senior psychology staff members. For more detailed information, please contact the Director of Psychology Training.

Program Description

The UCC embraces a scientist-practitioner training philosophy in a comprehensive outpatient multidisciplinary agency; staff members include licensed psychologists, social workers, a licensed clinical mental health counselor, and a part-time psychiatrist. We provide preventive, developmental, and therapeutic services to a large and diverse university community. The agency has a strong and enduring commitment to diversity. We consistently strive to integrate multiculturalism into our everyday functioning. We advocate a philosophy of acceptance, compassion, and support for those we serve, as well as for each other. We have equally strong commitments to high-quality service delivery and to training. Specific opportunities include: Counseling with individuals, groups, and couples; providing crisis intervention; teaching or co-teaching undergraduate classes (Multicultural Issues and Strategies for College Success); providing clinical supervision; conducting campus outreach/consultation; and completing formal assessment batteries and test reports. Each intern completes a Diversity Initiative of her or his choosing. Interns participate in our Staff Development and Multicultural Development series with permanent clinical staff. Interns also participate in intern training seminars in clinical case conceptualization, group therapy, couples therapy, diversity issues, consultation/outreach, professional development, psychological assessment, applied ethics and clinical supervision. Research opportunities are available. Please see our website for a video overview and a complete description of our training program: <http://counselingcenter.utah.edu/training/index.htm>

Program Description

The VASLCHCS offers broadly-based, generalist training through training in assessment, treatment, and consultation/liaison in BOTH medical and mental health settings. Interns engage in four Major Rotations (3 months each), along with concurrent experiences in Outpatient Mental Health and Psychological Assessment (6 months each). This structure allows for both breadth and depth of clinical experiences, as well as exposure to a variety of treatment approaches and supervision. Interns select from nine Major Rotations: Inpatient Psychiatry, Mental Health Consultation/Liaison, Physical Medicine & Rehabilitation, Behavioral Health Primary Care, Health Psychology, Geropsychology, Post-Deployment Readjustment, Palliative Care, Pain Medicine, and Substance Abuse. Within these settings, interns function as providers, consultants, and members of interprofessional teams. They are exposed to serious psychopathology and complex medical conditions, allowing them ample opportunity to put to use the diagnostic and treatment skills learned in their academic settings. The six-month Outpatient Mental Health placement provides interns with the opportunity to provide psychotherapy (individual and group) and receive exposure to Evidence Based Psychotherapy. Populations may include veterans with combat-related PTSD, Military Sexual Trauma, Substance Use Disorders, Mood and Anxiety Disorders, Personality Disorders, and Serious and Persistent Mental Illness. The six month Psychological Assessment experience involves providing the full range of services associated with psychological and neuropsychological assessments (intake, testing, scoring, write-up, and feedback provision). Referrals for psychological evaluations come from medical, mental health, and other specialty clinics requesting differential diagnosis and treatment planning. Evaluations are closely supervised, with interns being exposed to a variety of styles and approaches to psychological assessment.

Program Description

Valley Mental Health is a comprehensive mental health system. Our goal is to provide the intern with experiences across a diversity of settings to enhance their professional experiences. Rotations last from six to twelve months at chosen sites. Interns meet with a minimum of two supervising psychologists weekly and, in addition, training seminars are taught by staff psychologists or outside faculty on topics that reflect our training model. Areas of focus include: assessment, diagnosis, supervision issues, crisis, legal commitment, ethics and treatment with individuals from different cultures.

Program Description

The Primary Children's Hospital (PCH) Psychology Internship Program follows a practitioner-scholar model within a pediatric, behavioral health environment. The program's mission is to increase intern competence in clinical skill areas, consistent with PCH's mission, vision, and values, and guided by evidence-based and ethical practices. The internship year is organized around 7 core competencies, which we believe are critical knowledge areas for practicing professional psychologists. The internship program's goal is to prepare doctoral level interns for entry-level psychology post-doctoral or resident positions, with a child/adolescent and family focus, in a variety of settings. The program is designed to be an experiential work and training opportunity, wherein interns receive service-oriented diagnostic and treatment experiences that are sequential, cumulative, and graded in complexity, adding to interns' professional development, helping them make the transition from psychology intern to professional psychologist. For the coming training year, we will have five internship positions: two interns that rotate between an outpatient psychiatric clinic and an adolescent residential/day treatment program; two interns who are primarily based in a pediatric outpatient clinic but who also provide assessment services in our behavioral health continuum; and one full-time pediatric psychology intern who provides both C&L services in our hospital and who sees pediatric psychology outpatients. In addition to site-specific training opportunities and weekly individual, face-to-face supervision, all interns attend four weekly, structured training activities—individual therapy seminar, family therapy seminar, peer supervision, and a didactic seminar series organized around internship class needs. During the summer months, interns spend one-half day a week on a mini-rotation, gaining additional experience in an area of particular interest mutually agreed on by intern and primary supervisor, and consistent with training needs.

Program Description

*** INFORMATION MAY BE OUTDATED. PLEASE CONTACT PROGRAM DIRECTLY FOR INFORMATION.***The Southwestern Vermont Psychology Consortium was developed to provide a diverse training experience, including outpatient therapy, neuropsychological assessment, and clinical research, across a broad spectrum of clients. Southwestern Vermont Psychology Consortium offers pre-doctoral interns a breadth of clinical experience, from individual therapy to research with an emphasis on depth of understanding of selection, administration, scoring and interpretation of neuropsychological tests. The Southwestern Vermont Psychology Consortium is a structured internship program that includes supervised experience in: the conduct of psychotherapy; the conduct of initial intake interviews; determination of diagnoses and creation of therapy goals and treatment plans; selection, administration, scoring and interpretation of psychological assessment batteries; participation in didactic experiences. Interns are also trained to conduct interviews and write clinical reports. Interns are members of multi-disciplinary teams comprised of licensed psychiatrists, licensed psychologists (doctorate and masters level), and neurologists, who diagnose and treat patients with Alzheimer's disease, other neurodegenerative disorders, and psychological problems.

Program Description

The Brattleboro Retreat, Predoctoral Clinical Psychology Internship Training Program offers professional psychology training that emphasizes both generalist and specialty training using a scientist-practitioner model. The general goals of the internship are:
- to integrate the theoretical, research, and applied aspects of graduate education and training in psychology with the professional practice of psychology-socialization that leads to the development of a professional psychologist identity;
- to prepare to function independently, competently, and ethically as a professional practicing psychologist;
- to develop adequate levels of proficiency in basic professional skills required to evaluate, treat, and consult with a wide range of clients with a variety of psychological disorders;
- to build upon a generalist foundation with specific training in the area of psychological trauma treatment for uniformed services personnel including police, fire, military, veterans, emergency medical technicians, and corrections personnel;
- to develop in the practice of professional psychology an increased awareness and sensitivity to issues related to racial/ethnic bases of behavior.

Program Description

The Clinical Psychology Internship Program at the University of Vermont is a predoctoral internship program that received accreditation from the American Psychological Association (APA) in July 2013 and is a member of the Association of Psychology Postdoctoral and Internship Centers (APPIC). The internship is located in Burlington, Vermont, within the Behavior Therapy and Psychotherapy Center (BTPC) and the Vermont Center for Children, Youth and Families (VCCYF). The focus of intern training at the BTPC is with the Connecting Cultures Specialty Service, providing culturally competent evidence-based treatment to torture survivors and refugee populations from over 25 countries. Interns in the BTPC also engage in multi-disciplinary services with providers including social workers, teachers, lawyers, and refugee advocates. In addition to direct clinical services, the Connecting Cultures program offers outreach services, presentations and evaluation/research opportunities. Connecting Cultures is also a component of the New England Survivors of Torture and Trauma (NESTT) program. The VCCYF specializes in the application of evidence-based strategies from the family perspective, addressing both child and parental emotional and behavioral problems. Through the use of health promotion, prevention, and intervention, the VCCYF uses the Vermont Family Based Approach to help the well remain well, prevent at-risk children from developing emotional and behavioral problems, and intervene comprehensively on behalf of children and families challenged by psychopathology. At the VCCYF, interns will collaborate with professionals in psychiatry, psychology, social work, nursing, and genetics. We currently have two interns placed in the Internship. We encourage applications for the 2014-2015 year. Access <http://www.uvm.edu/medicine/vccyf/?Page=internship.html> for an application and further information or contact Kathleen Kennedy, Ph.D.

Program Description

This scholar-practitioner internship provides strong generalist training emphasizing clinical practice with adults. Our program trains interns who wish to become well-rounded psychologists who function well in a variety of clinical settings. Interns complete clinical experiences in assessment and treatment in a primary health care setting, inpatient assessment and treatment, outpatient psychotherapy, psychological assessment and neuropsychological screening, and specialty training in the assessment and treatment of PTSD. As part of the specialty training for the treatment of PTSD interns will learn cognitive processing and prolonged exposure therapy (CPT and PE). Interns have the opportunity to become VA certified CPT therapists. Interns treat veterans ranging from late adolescents to older adults as well as undergraduate and graduate students at the Dartmouth College Counseling Center. Emphasis is placed on working with patients from diverse backgrounds including low SES patients from rural communities. Interns are trained in different treatment modalities including individual, group, short-term and long-term psychotherapy. Interns work and train alongside psychiatric residents, social work interns and psychology practicum students and work as part of multidisciplinary teams in the Mental Health Service as well as consulting with primary care and specialty health care professionals. Strong clinical supervision is provided for all clinical experiences. Training emphasizes cognitive-behavior therapy and psychodynamic psychotherapy through group and individual supervision and case conferences. The internship is associated with the National Center for PTSD. Interns participate in a weekly National Center PTSD journal club facilitated by top researchers in the field. In addition to clinical training, interns participate in a variety of didactic seminars including seminar training in Cognitive Processing Therapy, Time-Limited Dynamic Therapy, Assessment, and a seminar focused on Professional Issues, Clinical Practice and Diversity.

Program Description

Clinical psychology internship for Argosy University, DC students. Intern/s placed at one of 11 member sites for entire year. Consortium Training Director directs entire program. Note that each site offers a broad range of generalist and specialty services, for both children and adults. Note most importantly that all interns have experiences in crisis intakes, therapy, assessment, outreach, consultation, diverse populations, supervision of others, management activities and specialty services at each site. Sites will be differently organized to how to achieve these learning goals. Listed below are the areas of specialty also. Supervisors form an Oversight Committee for benefit of all interns and sites. Interns visit all sites for training experiences, and interact with each other weekly. 1. Associated Children Services: private, biofeedback, sex offenders, legal cases 2. Barry Ekdorn Ph. D. Inc: private, neuropsychology, hospital, rehabilitation 3. Basics Counseling: private, community, home, schools, grants 4. Catholic Charities Child and Family Services: inpatient, outpatient, school, family. 5. Center for Children: United Way, family, abuse, sex offenders, schools, advocacy 6. Community Counseling & Mentoring Services: private, community, Multi-systemic Therapy, Head Start, schools 7. Interdynamics: private, legal cases, neuropsychology, schools 8. Loudoun County Mental Health Center: Public, play therapy, foster care/adoption, military, immigration 9. Prince William Family Counseling: private, home-based, family support, hospital 10. Washington Medical Group: medical, neuropsychology, TBI, individual, group, family. Most sites offer 2 intern slots. Request MAIC Brochure for details from gnorbury@argosy.edu

Program Description

The CAPS internship program provides a structured and progressive training experience to foster the development of core clinical and consultative skills, as well as individual interests and specialties. It is the intention of the training program to prepare interns for practice in a wide range of clinical settings in which the focus is primarily psychotherapy treatment and psychological assessment. Our training is conceptualized as a developmental-practitioner model, and activities integrate didactic and experiential components to facilitate learning in the provision of clinical services to students, as well as consultation and outreach to members of the University community. Interns develop and refine skills in the areas of brief assessment, individual and group psychotherapy, diagnostic evaluation, risk assessment and crisis intervention. Additionally, interns learn to provide consultation to other health providers, deans, and faculty, and gain experience in presenting psychoeducational outreach programs to the University community. The internship program also provides interns with didactic and experiential supervision training, as well as training in psychological testing. Our training focuses upon the application of principles essential to effective brief and longer-term therapy, with emphasis on contemporary psychodynamic concepts related to psychological development. Training at CAPS also emphasizes the application of related empirical findings to the provision of these services. Noted strengths of our program include supervision in psychodynamic based psychotherapy, group therapy, risk assessment, and brief intervention. In addition, as members of multidisciplinary treatment teams, interns benefit from the opportunity to hone formulation skills in a collegial atmosphere that recognizes the complexity of human experience and values multiple clinical perspectives.

Program Description

The CAPS two-year part-time internship program has been accredited by APA since 2010. Primary areas of training include individual psychotherapy, group psychotherapy, crisis assessment, crisis intervention, consultation, outreach, and supervision of trainees. George Mason University has a very diverse student population; therefore, the internship emphasizes the development of multicultural competence. Weekly seminars on a broad range of relevant topics are provided. Supervisors are board-certified or licensed psychologists with a range of theoretical orientations including cognitive-behavioral, humanistic, and narrative approaches. At least two hours of individual supervision and two hours of group supervision (including full-staff case conference) are provided. Interns also participate in a multicultural case conference twice a month. Didactic seminars include fmini-courses\$ on multicultural issues in counseling, dialectical behavior therapy, evidence-based treatments, supervision theory and practice, and ethical issues for psychologists, among others.

Program Description

Rappahannock Area Community Services Board is a nationally accredited, progressive community mental health center. We provide treatment for mental illness, addictive disease, and developmental disorders in eleven facilities in north central Virginia. Our sites include residential, intensive, and outpatient facilities for children, adolescents, and adults. Founded in 1970, Rappahannock Area Community Services Board is a local public agency with a mission and treatment philosophy of providing the highest quality health services affordably to our communities. The RACSB internship is designed to provide a broad and general preparation for entry level practice of professional psychology. Each intern negotiates two different program settings to provide breadth. Some interns may wish to concentrate on certain populations (e.g., children), clinical problems (e.g., substance abuse), or skills (e.g., psychological assessment) but all interns are expected to develop as generalists. The training model emphasizes the integration of clinical practice and science. Thus, applied practices, which are based most closely on scientifically tested theories, are more valued than those that are only loosely based on a scientific foundation. Further, all services must meet appropriate national standards of care and have proven outcomes of safety and effectiveness. The training model strongly encourages a life long commitment to currency with professional literature. There are clear role, structural, and value boundaries between training and service delivery. This allows interns to integrate experience, supervision, education, and training through reflection, consultation, peer support and professional interaction. Productivity requirements for interns are challenging but substantially lower than for equivalent professional staff. RACSB has a commitment to multidisciplinary professionalism and a tradition of extraordinary contributions by psychologists.

Program Description

The mission of the Hampton Veterans Affairs Medical Center pre-doctoral psychology internship-training program is to provide a training experience that ensures quality health care for our nation's veterans and ensures that the Department of Veterans Affairs has a constant source of well-trained and qualified psychologists for future employment. We have 5 fully funded slots. Three of these funded slots are labeled <cf3>fGeneral Psychology</cf1> slots and provide broad training. The required rotations are Inpatient Psychiatry, Outpatient Mental Health, PTSD Clinic (PCT), and the Drug Abuse Program (DAP). Two 340 hour elective rotations allow the intern to explore areas of his or her interest. We also have two slots in our <cf3>fIntegrated Behavioral Health (IBH)</cf1> emphasis area. The 5 required rotations are: Inpatient Psychiatry, Health Psychology, Primary Care Patient Aligned Care Team (PACT), Womens PACT, and Albermarle Primary Outpatient Clinic (APOC). Interns get to choose one additional 340 hour elective rotation. Interns in our IBH emphasis area will be part of a cohort of two psychology interns, one psychiatry resident, and one social work intern. Together these trainees will rotate through the aforementioned rotations.

Program Description

Training activities integrate didactic and experiential learning components to assist interns in achieving intermediate to advanced levels of competency in assessment and diagnosis of presenting concerns, outpatient individual and group therapy, crisis intervention, and making referrals for appropriate treatment modalities. Interns are trained to provide psychoeducational outreach programs, serve as consultants for university organizations and programs, and provide clinical supervision of counselors in training. Weekly caseloads average 12 individual client hrs, 1.5 initial assessment hrs, 3 initial therapy hrs, 1.5 group therapy hrs, and 4.5 hrs per week of emergency coverage. The training program is grounded in the Developmental-Practitioner model of training, which is based on the premise that learning occurs as a developmental process by engaging in experiential activities and receiving supportive guidance and feedback within the context of close supervisory relationships. We seek to build upon the clinical and didactic knowledge base acquired at the interns' host institutions to nurture the transition from graduate student/apprentice to professional psychologist. On average, a minimum of 5 hrs of supervision are provided on a weekly basis (2-3 hrs for individual, 1 hr for training track, 1 hr for supervision of supervision, .5 hr for group, and 1-2 hrs via seminars). Interns' acculturation to the CSDC community is facilitated by forming a supportive cohort and appropriate personal and mentoring relationships with clinical staff at the Center. The training program is committed, through mentoring relationships, to cultivating the person of the intern as well as the conceptual and methodological skills necessary to the ethical practice of psychology.

Program Description

GPIP offers a full-time (40 hours per week, 1850-2000 hours total) pre-doctoral internship experience for students pursuing Ph.D. or Psy.D. degrees who have completed coursework, practicum/externship placements, competency examinations, and preferably thesis or dissertation requirements. The goal of GPIP training is to assist interns in meeting requirements needed to complete their doctoral programs and later obtain licensure as clinical psychologists. Training occurs primarily at Greensville Correctional Center (GRCC) through the performance of clinical duties within the Sex Offender Residential Treatment (SORT) Program, the Residential Treatment Unit (RTU), and/or the General Population (GP). The intern will spend three days per week in his/her primary rotation which could be SORT, RTU, or GP. One-and-a-half days per week will be spent in his/her secondary rotation. The last one-half day will be spent in didactic activities and attending to any work remaining at any of the intern's rotations. The Internship Committee will work with the intern class to develop a rotation schedule that best meets the training goals and career needs of each intern. The Internship Committee recognizes that beyond meeting the minimum requirements, applicants differ in both prior experience and professional goals. Therefore, each intern's training needs and goals are assessed at the beginning of the internship year and revisited quarterly to ensure adequate progress and professional development. While the training program includes regularly scheduled and required activities, the internship supervisors also have considerable flexibility to work with the interns to develop specialized, elective activities/programs to help them pursue their individual interests. For more information please email the Training Director.

Program Description

Program Description: The Internship subscribes to a practitioner-scholar model of training which encourages the growth of individual strengths, provides a variety of teaching styles and professional models, and emphasizes the development of the scientist-practitioner. Specific training goals include further development of assessment and psychotherapy skills with a wide range of client populations through involvement in diversified inpatient and outpatient activities. The intern completes two major rotations, each lasting six months. The intern spends approximately 24-32 hours per week in the major rotation. The major rotations provide opportunities for conducting personality, intellectual and neuropsychological assessments; participating in interprofessional teams; and providing group, family and/or individual psychotherapy. Minor rotations are training experiences that are eight hours per week in an area of interest to the trainees, and by opting for a minor rotation, interns can have more breadth in their training year (e.g. recent minor rotations have included inpatient integrated primary care psychology, outpatient integrated primary care psychology, child and adolescent neuropsychology, adult neuropsychology, pediatric rehabilitation medicine, eating disorders, bariatrics, sleep disorders, geriatric integrated primary care psychology, and clinical research projects). All interns also carry a limited outpatient caseload (generally 2-3 cases at any given time). Efforts are made to assign supervisors based on the intern's interests with respect to therapeutic modality and patient population. Didactics and case conferences are offered throughout the year in areas such as behavioral medicine, primary care psychology, multicultural diversity, child and

Program Description

The ET/SWVA Consortium was created at the end of 2010 and currently consists of three agencies, although more may be added in future years. The primary goal of the internship is to provide an intensive and diverse clinical training experience within (a) a community health setting (2 interns), (b) a university counseling center (1 intern), or (c) a community mental health center (1 intern).

Stone Mountain Health Services consists of 11 health centers across Southwest Virginia and interns placed here will receive experience providing integrated care. Most clients are lower socioeconomic status and Appalachian, providing interns with opportunities to meet the needs of traditionally underserved groups.

Radford University Student Counseling Services (SCS) is run by Carilion Clinic and serves the needs of Radford students, many of whom are first generation.

New River Valley Community Services (NRVCS) is a community mental health center and the intern placed here works in the Child and Family Services Unit.

Interns will work at Stone Mountain or SCS or NRVCS all year; interns at Stone Mountain will switch clinics after 6 months.

The ET/SWVA Consortium is partially affiliated with the Clinical Psychology Ph.D. Program at East Tennessee State University and the Counseling Psychology Psy.D. Program at Radford University. If either of the two slots with Stone Mountain remains open after all acceptable ETSU and RU students are placed, then the positions will be open for applicants from other programs, preferably those with a rural and/or health-related focus. If the single slot with RU Student Counseling Services remains open after RU students are placed then it will be open to applicants from other programs. If the single slot with NRVCS remains open after RU students are placed then it will be open to applicants from other programs.

This process includes a background investigation, drug screen, panel/pre-employment interview, and two-week Institution Familiarization course.

Program Description

The Pre-Doctoral Psychology Internship Program at FCC Petersburg will provide one year of full-time training (approximately 2,000 hours) in the FCC Petersburg Psychology Services department to three pre-doctoral level psychology interns. The 2014-2015 internship year at FCC Petersburg will begin during the week of August 10, 2014.

FCC Petersburg earned Association of Psychology Postdoctoral and Internship Centers (APPIC) Membership in August, 2012, and will participate in the 2014-2015 Match as an APPIC Member. Earning accreditation from the American Psychological Association (APA) as soon as possible is the goal of the Bureau of Prisons for all of its internship sites, including FCC Petersburg. The FCC Petersburg Pre-Doctoral Psychology Internship Program submitted a Self-Study to the American Psychological Association Commission on Accreditation on 09/3/13. A response regarding the submitted Self-Study has not been received from the Commission on Accreditation to date (9/27/13). Presently, FCC Petersburg Psychology staff members are committed to modeling the internship program after the standards set forth by both APPIC and APA.

The FCC Petersburg Pre-Doctoral Psychology Internship program is guided by the Practitioner-Scholar model. Consistent with APA guidelines for internships, all interns receive four hours of supervision per week, of which at least two hours involve individual supervision. Presently FCC Petersburg Psychology staff include five licensed Psychologists.

FCC Petersburg Interns have the opportunity to complete a four month rotation on each of the available primary rotations (e.g., Drug Abuse Program, General Population/Mental Health, and Sex Offender Management Program). Interns additionally complete a year-long secondary general population/mental health focused rotation, where each intern has the opportunity to provide longer term care to their caseload.

Additional information associated with the FCC Petersburg Pre-Doctoral Psychology Internship can be obtained by viewing the following website: <http://www.bop.gov/jobs/students/psychology.jsp>

Information about the FCC Petersburg Pre-Doctoral Psychology Internship can also be obtained by contacting the Internship Program Coordinator (Kelli L. Heck, Ph.D.) directly at the following email address: kheck@bop.gov

Program Description

The VTCC internship brochure and application materials can be downloaded from our website: www.vcu.edu/psych/education/programs.shtml The Virginia Treatment Center for Children (VTCC) is part of the preeminent Virginia Commonwealth University Medical Center (formerly Medical College of Virginia). The predoctoral internship in clinical psychology at VTCC has been accredited by the APA since 1975 and is a member of APPIC. Major rotations include: child/adolescent acute psychiatric treatment, outpatient child/adolescent and family therapy, child/adolescent psychological evaluation, and pediatric consultation. VTCC is a child/adolescent psychiatric facility with acute and outpatient treatment programs for children, adolescents and their families experiencing severe emotional disturbance. VTCC treatment teams are interdisciplinary with faculty, staff, and trainees from disciplines of psychology, psychiatry, social work, nursing, education, occupational and recreation therapies, speech/language therapy, and music and art therapies. Interns also provide consultation to the emergency department and pediatric inpatient units. The VTCC psychology faculty are committed to providing interns with the opportunity to develop skills in therapy, assessment, and consultation using theoretically grounded and empirically supported techniques with children, adolescents, and their families from diverse backgrounds, within a supportive training environment. Training is presented through a strong didactic series, supervision from faculty holding a variety of theoretical orientations, and diverse clinical experiences.

Program Description

The Central Virginia Consortium for Clinical Psychology is composed of two member agencies: Jewish Family Services (JFS) and Eastern State Hospital (ESH). The Central Virginia Consortium has an innovative and comprehensive approach to clinical training. Its combination of on- and off-site training experiences prepares interns for work in a variety of clinical settings—inpatient or outpatient, public or private, or with individuals anywhere along the age spectrum. The didactic curriculum approaches training from a lifespan perspective, highlighting parallels and key differences between populations of different ages and levels of psychosocial development. Each member agency hosts one intern for 32 hours per week on-site. The remaining weekly hours are spent in didactic trainings (which rotate between sites), on community field trips (e.g., to locations such as private practices, state psychiatric and correctional institutions, and innovative and unique programs), and individualized smaller-scale clinical experiences. The Central Virginia Consortium provides a comprehensive training program that follows the standards set by APPIC. This includes at least 2 hours per week of individual supervision by licensed clinical psychologists, a comprehensive didactics program, participation in monthly case conferences, opportunities for training and collaboration with fellow students, and myriad clinical experiences. In addition, both membership agencies place a strong emphasis on interdisciplinary team work.

Program Description

The Internship consists of 3, 4-month long major rotations, ongoing outpatient cases (5-7 ongoing cases is the target), and co-leading an ongoing psychotherapy group. All interns will have a primary outpatient case supervisor and a major rotation supervisor. The major rotations include Mental Health (inpatient/outpatient), PTSD Program, Health Psychology, Primary Care Mental Health, Substance Abuse Program, Polytrauma Program, Neuropsych, Geriatrics, and Spinal Cord Injury. Neuropsychological experience is available through the Polytrauma and Geriatric rotations. The outpatient cases will come from the Outpatient Mental Health Clinic, PTSD Program, and the Military Sexual Trauma programs. All Interns are required to demonstrate competency with psychological, medical clearance, and neuropsychological screening assessments. Didactics and supervision provide training in several evidence based therapies including: motivational interviewing, cognitive processing therapy, seeking safety, acceptance and commitment therapy, social skills training, and cognitive behavioral therapy for insomnia.

Program Description

The Salem VAMC offers a generalist program in professional psychology with a strong cognitive-behavioral orientation. We adhere to a scientist-practitioner model. The focus of our training programs is TRAINING and we use a developmental model for supervision. Major rotations (4-6 months) occur for 4 days/week. A rotation in Evidence-Based Psychotherapy is required. Behavioral Medicine/Primary Care, Substance Abuse, Neuropsychology and PTSD (inpatient or outpatient) major rotations are elective. Minor rotations are varied in experience and length. Interns spend approximately 1 day/week on their minor rotations. Examples of on and off-site minors include: Sport Psychology, Administration, Neuropsychology, Geropsychology, Palliative Care, Consulting Psychology, Military Sexual Trauma, Combat Trauma, Psychiatric ER, Chronic Pain, Children and Adolescents, Behavioral Medicine, Primary Care Psychology, Forensics, Substance Abuse, Program Development and Evaluation, EAP, and Research. Extensive didactic trainings are an important component of the internship. Didactics occur weekly for approximately 1.5 hours. Seminars on independent practice issues, assessment, ethics and legal issues, diversity, working with personality disorders, self-care of the therapist, pain management, exposure therapy, supervision, motivational interviewing, and forensics. Research is encouraged and publication opportunities are available. Collegial, warm, supportive atmosphere. We focus on creating a balanced life, which integrates personal and professional interests and activities. Time is provided weekly to facilitate intern relationships. Significant focus on dissertation completion, professional development, and employment search. Our beautiful location in SW Virginia's Blue Ridge Mountains offers numerous recreational and cultural activities. Safe environment, good schools, slower pace of life. Nearby Universities include Virginia Tech, Roanoke College, Hollins and Radford.

Program Description

Virginia Beach City Public Schools is a large (69,000 students), urban/suburban school district in southeast Virginia bordering the Atlantic Ocean. Psychological Services staff (licensed clinical and school psychologists) provide internship training and supervision within a general track and a pediatric neuropsychology track. Each intern (regardless of track) will have experiences in the Preschool Assessment Center with children 2 to 5 years of age, at a regular elementary school providing psychological services (assessment, consultation, counseling, crisis intervention) under supervision, in Autism Services (ADOS assessment and intervention) and in the gifted education program providing assessment and therapeutic services. The Pediatric Neuropsychology Track intern will spend about 1 day per week in neuropsychology-related activities. This could include assessment, consultation, and therapeutic intervention, and long-term follow-up. Additional experiences will be based on the intern's interest and district needs. These may include alternative education programs with behaviorally-disordered students, the Neuropsychology Center (neuropsychological assessment, consultation, cognitive remediation on a more limited basis than the Pediatric Neuropsychology track), Adult Learning Center, Day Treatment and other specialized programs. Experience with a wide range of clinical disorders will be provided and may include students with learning disorders, pervasive developmental disorders (ASD, Aspergers), ADHD, mental retardation, hearing and visual impairments, post traumatic stress disorders, anxiety and mood disorders, schizophrenia, medical and neurological disorders. Interns meet for weekly seminars and group supervision. Interns are assigned a licensed clinical psychologist as their primary supervisor who provides weekly individual supervision. Additional supervision is provided at the intern's assigned sites by licensed staff responsible for those programs.

Program Description

The WMCC internship program requires the completion of a 2000 hours, of which, 500 hours are to be direct service. The training program at the WMCC embraces the responsibility of providing a supportive and comprehensive doctoral-level internship. The program follows a Developmental- Experiential- Apprenticeship model. Our training philosophy emphasizes a learning by doing approach coupled with didactic seminars, and an interactive process-oriented learning experience. An important component of the WMCC philosophy of training is the belief in the need to integrate scholarly knowledge and critical thinking into clinical practice and clinical decision making. Similarly, considering the role of the self as a therapeutic tool, we encourage, but not require, exploration of personal experiences that could impact clinical work. Woven throughout the training program is an appreciation for the diversity of all people. Interns fulfill the multiple roles of a counseling center psychologist. Individual, couples, and group work, training and supervision, assessment, crisis intervention, and outreach and consultation are major components of the internship program. We strive to provide a collegial and supportive atmosphere in which interns feel safe but challenged to develop a flexible and integrated repertoire of skills and competencies. Staff members are committed to the training program and serve as mentors for interns. Interns benefit from formal and informal consultation with staff members who are diverse in terms of disciplines, theoretical orientations, interests, and skills. Our training program is designed to prepare interns to work as generalists and as ethical, multiculturally sensitive and competent clinicians. We strive to facilitate the integration of knowledge and skills and the consolidation of a solid professional identity.

Program Description

The Western Washington University Counseling Center is a unit of Counseling, Health, and Wellness Services, in the Division of Student Affairs, and is accredited by the International Association of Counseling Services (IACS). The Counseling Center offers a wide range of counseling and student development services and is the primary mental health facility of the campus. The staff of the Center spends roughly 60% of its time in direct client service, client-related activities, and supervision, with the remainder devoted to outreach, administration, consultation, training, and staff development activities. Currently, the Center includes 8 full-time professionals and 3-4 graduate trainees (including 2 pre-doctoral interns), supplemented by 2 full-time support staff. While the Center utilizes a brief therapy model, there are opportunities for longer-term counseling. Staff members practice in a variety of counseling modes and represent a number of theoretical approaches to counseling and psychotherapy. Professional staff members are licensed mental health counselors or licensed psychologists in the state of Washington. Interns devote a minimum of 25% of their time to direct service activities, including individual and group counseling, initial assessment interviews, daytime and after-hours on-call services. Interns also participate in a weekly 2 hour seminar, weekly staff meetings, peer consultation groups, and a weekly consult hour with Health Center staff. Interns are expected to co-facilitate at least one of the multi-session groups offered by the Center. Involvement in outreach/consultation activities is strongly encouraged.

Program Description

The Counseling Clinic doctoral internship follows a Practitioner-Scholar training model integrated with a developmental framework. Our staff consists of 3 licensed psychologists (2 full time, 1 part time for this year), 1 Psychological Resident, and two licensed mental health counselors. The Counseling Center is housed with the Student Medical Clinic and has extensive interaction with medical providers. All interns receive a 2.5-3 week orientation focusing on training in the services we provide to our students as well as considerations of ethical practice in a rural setting. Throughout the year interns will participate in weekly clinical training seminars and a biweekly diversity seminar. All counseling staff meets weekly for 1.5 hours in case consultation and for one hour biweekly in a multidisciplinary staff case consultation. Each staff member, including interns, rotate crisis coverage during office hours. We work with a population with a multitude of clinical issues matching the nation-wide trend of increasingly severe clinical presentation among student populations. We mainly use a brief therapy approach but also maintain some long term clients on our caseload. We encourage a variety of theoretical orientations; the clinic is influenced by ACT principles. Interns will be trained in assessment skills and will provide ADHD and personality assessments. Interns are required to complete one intern/consultation project and two outreach presentations during the year. They may choose to do more according to interest and opportunity. Group counseling is valued and encouraged for our student clients. Interns are expected to co-facilitate a group early in the year and independently facilitate a group by the end of the training year. The entry point for counseling services at our center is participation in three one-hour seminars introducing basic. In turn, these relationships can help the students be more open to learning the life skills required for short and long-term success.

We are seeking highly motivated individuals, who have experience working with challenging young people, and are interested in being an active part of our dynamic clinical staff. Our Pre-Doctoral Interns get consistent opportunities to collaborate with our 2 Post-Doctoral Fellows, and to informally supervise our 4 Psychotherapeutic Externs - our Fellows, Interns & Externs have reported this training opportunity to be an extremely valuable learning experience. Please see the Connection's Day School website: <http://www.connectionsdayschool.net/> to get general program information; and for specific information about our Internship program, go to the [Clinical Training](#) page of the website, and click on [Pre-Doctoral Internship Program](#).
APPLICATION NOTE: Please do not send any application materials under separate cover - all materials should be sent together through AAPI Online. CDS abides by the APPIC policy that no person at this training site will solicit, accept or use any ranking-related information from any Internship applicant.

Program Description

Our program provides interns with a developmental transition from practicum-level counseling skills and interventions to the professional competencies required of psychologists practicing in varied clinical settings, including university counseling centers. Our training philosophy is based upon a Practitioner-Scholar Model. As such, the purpose of our program is to train interns whose work is informed by practice, theory, and research and who take into account individual, multicultural, and societal considerations in their clinical and other service delivery endeavors. Our program offers intensive individual supervision, through which interns can identify specific training needs and interests. Primary training elements include individual counseling, intake assessment, psychological testing and assessment, substance abuse assessment, crisis management, outreach, clinical supervision, and a four-week inpatient rotation. Couples and group counseling may be available. Minor rotations include several options: alcohol & drug assessment and treatment, emotion-focused couples counseling, co-facilitating a doctoral practicum class, or working with other university departments or diverse populations of interest (i.e., Multicultural Student Services, Gender Identity Expression and Sexual Orientation Resource Center, International Center, Residence Life). Each intern year begins with extensive orientation and structured training experiences. We foster in-depth acquisition of core competencies (ethics, assessment and diagnosis, psychotherapy, crisis intervention, supervision, consultation and outreach, multiculturalism and diversity, and program evaluation) and the development of specialized skills by systematically reducing structure while facilitating an increasing level of professional autonomy. By the end of the training year, our expectation is that interns are ready for entrance to practice at the doctoral level in a variety of professional psychology settings.

Program Description

Our Behavioral Health staff are 8 F/T psychologists, one for each of our 7 primary care clinics and another in a school-based clinic. We utilize a fconsultant\$ model, to augment usual primary care by ensuring a well-rounded biopsychosocial treatment plan. We provide individual, group, and family interventions and work in close collaboration with primary care providers (pcp) in a fast-paced multidisciplinary setting. Visits are brief (20-30 minutes), limited in number (1-4 generally) and focused on functional restoration rather than diagnosis and therapy. We do not provide mental health therapy in the traditional sense, and our assessments and interventions are geared toward the primary care setting. This is a great position for applicants interested in a novel model of care that will likely become a fixture in primary care clinics of the future. HealthPoint has been a leader in primary care behavioral health integration. This internship will provide an exciting, challenging, and rewarding opportunity, in a supportive and enjoyable team atmosphere. Interns have a nice balance of autonomy and readily available supervision. We see a wide range of patients (children and adults) and problems. We serve a mostly underserved population, many of whom are immigrants. Patients are referred to Behavioral Health for all types of behavioral issues, including fmedical\$ problems such as coping with chronic illnesses, like diabetes, obesity, and chronic pain; lifestyle modification regarding exercise, diet, and smoking cessation; prevention activities, stress management, behavioral issues, and the whole range of fpsychological\$ problems such as anxiety, depression, etc. Interns will be involved with assessments, treatment planning and coordinating that plan with the pcp. In short, students will be exposed to any and all problems that fall into the health/mental health spectrum. There is no better place than a community health center to gain experience with a wide variety of problems!

Program Description

The University of Washington School of Medicine Psychology Internship provides excellent clinical, didactic, and research training firmly rooted in the scientist-practitioner tradition. The program has built a strong national reputation as a leading medical school-based internship, providing training in general adult psychology, behavioral medicine and health psychology, and child psychology. Training occurs at the University of Washington Medical Center, Harborview Medical Center, and Children's Hospital and Regional Medical Center in Seattle. Our faculty includes nationally-recognized researchers and clinicians with a strong interest in teaching and clinical training. An extremely strong research environment provides collaborative opportunities for those who are considering academic and/or research careers. We are members of the Academy of Psychological Clinical Science. Our psychology resident selection is weighted toward applicants whose training, experience, and academic accomplishments indicate potential for both clinical and research excellence. We especially encourage applicants who have a combination of excellent clinical skills, strong research interests and potential, and well-developed interpersonal and communication skills that will allow them to flourish in a multidisciplinary setting. Our goal is to provide the highest quality training for residents in a supportive and stimulating academic medical center environment. The internship program provides broad-based training in professional psychology with a strong scientist-practitioner orientation. There are emphasis tracks in three areas: General Adult Psychology, General Child Psychology, and Behavioral Medicine/Neuropsychology. Research training during internship is strongly encouraged with an optional grant writing seminar included in 6 hours of dedicated research time, or 4 hours of research time for those not in the grant writing seminar. Mentorship is provided by faculty researchers.

Program Description

The doctoral internship at the University of Washington Counseling Center is based on a Developmental Model that is experientially based & informed by psychological theory and research. In accordance with the premise that individual change & learning occurs within the context of significant human interaction, the supervisor-intern relationship & other mentoring relationships are key in our training program. This internship provides interns with a rich & varied learning experience that combines graduated learning & practice with science. Thus, our training program begins with an extensive orientation period & assessment of the intern's individual training needs. As the training year progresses, the number of didactic experiences diminish & the interns are given increasing clinical responsibility & autonomy. The primary focus of the internship training is to assist interns in integrating academic foundations with professional practice. This is accomplished by facilitating professional learning & personal growth by means of supervised clinical experience, didactic seminars, continued exposure to psychological literature, & collegial interaction throughout the year. Interns gain experience in individual short-term psychotherapy and related therapy skills, career assessment & counseling, group counseling (as available), psychological assessment, ethical & legal issues, supervision, diversity, consultation & outreach programming. The program is dedicated to the enhancement of the ethical, multicultural/social justice, & professional development of interns. Interns are encouraged to offer professional contributions in staff meetings & clinical teams, seminars, & outreach presentations. Upon completion of the internship, the developing professional will have sufficient experience in a university counseling center and general psychotherapeutic practices to confidently and competently carry out the responsibilities of an entry level professional in a variety of settings.

Program Description

The CARE Clinic (Clinical services, Assessment, Research, & Professional Education) at the University of Washington Haring Center, serves individuals from infancy through adulthood who have neurodevelopmental differences (including ASD, ADHD, learning disabilities, communication disorders, executive dysfunctions, behavioral disorders and developmental delays) and their family members. The Clinic is a vibrant community based program that empowers clients and their families toward self understanding and self determination. We partner with clients to assist them in creating lives that are meaningful, productive, and happy regardless of age, intellectual abilities or other neurological characteristics. We also work within community settings to shape environments that support individuals with any type of neurological diversity. Our program offers training experiences in adult and child diagnostic and psychological assessment, individual, family, and group treatment techniques, pediatric consultation and liaison, assessment of educational program and intervention, parent counseling, in-service training, seminars, clinical and developmental research, program evaluation, and numerous interdisciplinary and intradisciplinary activities. Interns are trained in many different diagnostic and therapeutic techniques including cognitive-behavioral, applied behavior analysis, feminist, positive behavior support, family systems, and psychodynamic techniques. Within the overall expectations of the internship, there are opportunities for interns to choose and design training experiences that support their own personal and professional goals.

---	---------------------------------------

Program Description

The American Lake internship program is founded on the view that a professional psychologist must be a broadly trained "generalist" before she or he can become a competent specialist. Thus, our competency-based internship training program is designed to provide a variety of clinical experiences while allowing some freedom to begin developing a particular area of focus. Interns successfully completing the internship program will have professional entry level skills in individual and group psychotherapy, knowledge and experience with a variety of psychological and/or neuropsychological tests, and experience in consulting with professionals from other disciplines. Based on their rotation choices, interns become knowledgeable about clinical issues related to specific patient groups and specialty areas such as geriatrics, addictions, PTSD, SPMI, and mental health/ primary care and behavioral health. They will be well informed about the variety of general mental health issues experienced by and often specific to the veteran population. In addition, they will have had the opportunity to have participated in at least one clinical research project. The intern's transition from "student-in-training" to entry-level professional psychologist is as important to this program as the acquisition of technical skills. Interns are expected to develop professional relationships with other clinical staff, to perceive and conduct themselves as valued contributing members to the treatment process, and to cultivate the competencies necessary to function as an early career psychologist within the VA system. Interns are partners in the development of training goals for their internship year. Through feedback, mentoring, and modeling, our aim in the training process is to assist the intern in acquiring those skills and abilities necessary to begin his/her professional career. formal post-doc positions, but former interns have become staff members (former interns are currently on staff).

Program Description

Western State Hospital features broad-based training in major mental illness and inpatient mental health. Specialty rotations include criminal forensic, adult civil, sexual predators (required), neuropsychology, and child/adolescent. Ample training opportunities include extensive forensic seminars, intern seminar series, and other continuing education provided at the hospital. Each rotation is four months long. A specialty rotation at the nearby Special Commitment Center (SCC) involving the evaluation or treatment of Sexually Violent Predators is required. SCC treatment is located on McNeil Island and is accessed by passenger-only motor launch from the Steilacoom ferry terminal. SCC evaluation is located in nearby Steilacoom, three miles from the hospital. Our psychology department is one of the largest in the state with approximately 50 licensed psychologists. About one-third of our staff are former interns. The psychology department also co-sponsors a postdoctoral fellowship in forensic psychology in association with the Washington Institute for Mental Illness Research and Training and the University of Washington School of Medicine, Department of Psychiatry and Behavioral Sciences. Our interns have the option of participating in the postdoctoral fellowship seminar series. Western State Hospital is located in the Tacoma/Lakewood/Steilacoom area, about one hour's drive from downtown Seattle. South Puget Sound is accessible by way of the quaint town of Steilacoom. An award-winning park with walking and hiking trails is across the street from the hospital on the south side, while a nine-hole golf and frisbee course adjoins the north side. The Cascade Mountain range offers many areas for downhill and cross-country skiing, hiking, and camping. Western State Hospital provides an intern open-house in January. Intern applicants are welcome at other times by arrangement. Please contact us by telephone, or email with any questions.

Program Description

Great fit for those desiring an integrative approach to deepen therapy skills and a generalist approach to array of professional skills (outreach, program design, crisis, assessment, etc.). Supervisors are integrative and primary orientations include psychodynamic, interpersonal, cognitive-behavioral and feminist/systems. We encourage interns to intervene with clients astutely and flexibly, from diverse theoretical perspectives. Hunger for learning, fine judgment, and dry wit are all valued here. Committed supervision, diverse opportunity, and a healthy multi-disciplinary environment reflect our values and what we offer. We are a civilized and hard-working bunch. Our merged psychology/health staff means nice opportunities for consultation across specialties, and an agency interest in complete diagnostic and prevention efforts. We treat primarily Axis I conditions and V codes. Program is unique for the discretionary activities interns use to tailor the training experience. For example, they may advise a group like the Queer Alliance (Q & A) or the Student Health Awareness Club (SHAC), may seek additional experience with substance abuse, suicide or anger management assessments, or may design their own psycho-ed group or workshop series. Also special is the opportunity to provide clinical supervision to a Practicum Counselor and receive supervision of supervision. § Though we are not an APA program our Licensed Psychologists are all from APA academic and internship programs. Past interns have not had difficulty with licensure.

Other Application Requirements

Match contingent upon meeting requirements for commission in the U.S.
Army. Apply with your local Health Care Recruiter at www.goarmy.com.
Interns incur a three-year obligation upon licensure.

Program Description

The philosophy of the Internship is based on a practitioner scholar model. The focus is on training the generalist practitioner in adult assessment, treatment, and consultation. Training is supplemented in specialty areas such as health psychology, neuropsychology, pediatric psychology, and primary care psychology. Interns are encouraged throughout the year to develop and to utilize their critical thinking skills, their knowledge of the scientific literature, and their ability to evaluate new research findings as a basis for clinical interventions. The Program recognizes it is essential to begin at each Interns level of professional development and provide opportunities through which existing skills are refined and new skills are acquired. Working from a general model, the primary goal of this Internship is to train clinical psychologists who are capable of functioning with professional autonomy in a variety of applied settings in the Army and in the local community, using evidence supported treatments informed by the scientific literature. For the 2013-2014 training year we will accept 6 full-time Interns who enter active duty as commissioned officers at the rank of Captain. Interns attend the Basic Officer Leadership course in San Antonio, Texas prior to beginning the Internship in the fall. Please access website for addition information: <http://www.mamc.amedd.army.mil/psychology/cpip/PIP-Home.cfm>

Program Description

This predoctoral internship program offers an in-depth training experience in clinical and health psychology services at a community medical center and hospital. With emphasis on support and flexibility, our objective is to refine interns' clinical and scholarly skills so that interns are prepared for work in a variety of clinical and medical settings. The predominant setting is within a community family medical center using the Integrated Primary Care Model. The work between the medical providers and psychologists/interns is virtually seamless and focuses on the whole person. This setting is at the cutting edge of the latest research techniques for clinic design as well as management strategies for populations with health disparities. As part of this, Columbia Valley Community Health (CVCH) serves a large Hispanic seasonal and migrant population. There are three medical clinics (Wenatchee, East Wenatchee & Chelan) that have well respected Integrated Models of care and the Behavioral Consultants (psychologists) are valued as part of the medical team. Care is provided using the Health Care Home model where the patient is directly involved in the collaborative efforts of their care. Interns that choose this site will feel welcomed for their unique qualities that they bring to the program and surprised by the fun and interesting work that they are part of on a daily basis. Wenatchee is located in central Washington where there are 300 days of sunshine, excellent weather, and extraordinary beauty. The city is surrounded by the Cascade Mountains. There are rivers and lakes close by. The location affords lots of summer and winter recreational activities including snowboarding/skiing within minutes. The BMed program has 2 Psychologists, 1 Psychiatric Nurse Practitioner, and 3 BMed Assistants.

Program Description

This predoctoral professional psychology internship endeavors to prepare interns for entry level service as practicing clinical and counseling psychologists. Exposure to a correctional facility and experience in our general inmate population prepares our interns for work within prison settings. Training is sufficiently broad to cover work in a wide variety of non-correctional settings. Exposure to specific rotations provide interns with a significant foundation for postdoctoral training, experience, and development in substance abuse and trauma treatment. The responsibility to provide interns with broadly applicable generalist skills while acknowledging the special needs and characteristics of a correctional setting has led to our adoption of the Local Clinical Scientist Model to guide our training and practice. Central to the concept of the Local Clinical Scientist is a professional who combines training and knowledge in the scientific content of psychology with an ongoing application of scientific principles in the practice of psychology. Interns bring to internship considerable knowledge of psychological theory and science-based practice gained in academic and practicum settings. During internship, interns are further exposed to scientific bases of psychological practice via didactic training seminars, assigned readings, and supervision of clinical work. In addition, the internship program provides, via extensive exposure to clinical training experiences and clinical supervision, abundant exposure to the application of critical/scientific thinking in the understanding and treatment of individual cases. The training philosophy of the internship program emphasizes learning that takes into account both the tremendous opportunities available within our setting and the inherent challenges of working in a prison. We therefore focus on three critical components of the internship experience at FCC Hazelton: opportunity, experience, and guidance.

<http://www.hsc.wvu.edu/Charleston/som/Beh-Med/Education/Psychology-Internship.aspx>
 The site is very comprehensive, and should provide you with a great deal of information necessary to make such an important decision. The program combines required and optional rotations, and provides a wide variety of experiences in a 1000-bed academic health center. It is student-focused and flexible, and a learning rather than service setting. Each student has unique career interests and needs so we strive to tailor the program accordingly. We know this is an arduous process and we wish you the best. We'll try to make the application process as painless as possible.

Other Application Requirements	
Per VA policy, male applicants born after 12/31/59 must have registered for the draft by age 26 and must sign a pre-appointment Certification Statement for Selective Service Registration before they can be processed into the training program. In addition, interns are subject to fingerprinting and background checks and match result and selection decisions are contingent on passing these screens. Interns are also subject to random drug screenings once they begin internship, as are all VA staff.	

Program Description

The internship training program is based on a scholar-practitioner model with a double emphasis on training in the area of applied clinical practice and in rural culture. It is designed to train generalist interns with self-decided specialty areas to function as independent, ethical and competent professional psychologists. The internship training program subscribes to the following characteristics most commonly associated with the scholar-practitioner model of training: A scholarly approach to practice via reflection and critical thinking; an application of empirically based research data to clinical practice; an emphasis on the psychologist as an avid consumer of empirical research; recognition of the importance of generating knowledge through practice; an expectation that interns will attend and become active participants in scheduled weekly academic/didactic activities; and development of mentoring relationships. Thus, our philosophy will be to implement and promote established, reliable and efficient treatment modalities and protocols to the greatest extent possible, and to actively encourage our interns to draw upon empirical literature to enhance the development of their professional skills over time. As scholar-practitioners, we strive to remain abreast of current empirical findings in our chosen areas of professional practice and to further our knowledge of treatment advances in order to inform clinical decisions. The training schedule includes a combination of required ?Major? rotations and elective ?Minor? rotations. Interns will choose 4 fMajor§ rotations from the areas of General Mental Health, PTSD, PRRC, SUD, HBPC and Behavioral Health/Primary Care. ?Minor? rotations in Military Sexual Trauma, Compensation & Pension, suicide prevention and administration are available. A mentorship program in EBTs is embedded into the program. Experience in telemental health is available. For more detailed information please see our training website.

Program Description

The primary purpose of the internship program is the training of interns for the practice of professional psychology in a variety of health care settings including but not limited to public service settings. Northwood strives to provide a balanced apprenticeship experience where supervised direct clinical practice, formal training events, and science and practice are integrated through instruction and reflection. Clinical assignments are determined by primary supervisors in collaboration with the training director and matched to individual student's training needs and interests through ongoing discussion of developing competencies and internship requirements. All interns will have supervised experience with a range of case and activity assignments across the training year. Interns will have the opportunity to do both brief and longer-term therapy with individuals, groups, and/or families throughout their internship. At least 25% of an intern's time is in face-to-face psychological services to clients. Interns spend 13 to 23 hours a week in face-to-face service delivery. This internship provides training and supervised experience in the following nine major competency areas of professional psychology: ethics, legal and professional issues; individual differences, diversity and social justice issues; the development of a theoretical orientation and the conceptualization process; sensitivity to client issues; sensitivity to self as therapist issues; the counseling process and clinical intervention skills; assessment and diagnostic skills; intake and crisis intervention; (and) a contribution to current knowledge/practices along with a commitment to continuing education

Program Description

This internship provides a solid experience in working with adolescents and young adults. We have a diverse and challenging clinical population. While we are a juvenile correctional facility, we have a strong treatment focus. We are an affirmative action, equal opportunity employer. Special note: This internship is an extension of the internship program which originated at Ethan Allen School (which was located in Wales, Wisconsin) in 1991. The internship program was relocated to Lincoln Hills/Copper Lake Schools (in Irma, Wisconsin) in June of 2011, following the abrupt closure of Ethan Allen School at that time. The internship program at Lincoln Hills/Copper Lake Schools has maintained most of the pre-existing structure and procedures as they existed when the program operated at Ethan Allen School, with only minor modifications. The Executive Committee of the APA Commission on Accreditation approved the continuation of this accredited program in this new location. To access our Internship Program Description on line go to: www.wi-doc.com/index_juvenile.htm, then click the fDivision Internship Opportunities button.

Program Description

Mendota Mental Health Institute's primary educational model is a professional model built on a Practitioner-Scholar orientation, in which research and theory inform practice. The majority of interns who come to MMHI aspire to professional careers as practicing psychologists in applied settings, although, many have obtained positions in research and academia. As a psychiatric hospital, MMHI's mission is to treat individuals suffering from mental illness and disorders. These services are based on the science of psychology, with a firm foundation in accepted and validated processes and procedures. Training goals and objectives of the program are to develop skills in assessment, evaluation, diagnosis, and psychotherapy/intervention for a diverse population (Adult males & females, Forensic Adult males and Juvenile males). Three inpatient rotations are assigned an intern for the training year with at least one rotation being with adolescents/children. However, some flexibility may be given under individual circumstances. A psychologist supervisor is assigned to each rotation unit with the intern. Close supervision is given particularly to assessment and therapy work during the training period. Each rotation is 4 months long and is deemed autonomous from the other rotations. Some overlap between rotations is allowed up to 2 hours per week. An intern is also assigned to one outpatient rotation during the year for one day (8 hrs) per week for training and exposure to psychological services with clients in the general community. Research opportunities are also available. There is strong support for training at MMHI, as training is an important part of our mission. The internship is highly regarded for bringing quality trainees to the units. Other staff, members of the units' multidisciplinary teams, routinely interact with the interns and assist in providing training experiences. The internship program is one calendar year (50 weeks), 40 hours per week.

We encourage applicants with clinical science orientation: PhD's preferred; clinician-scientist trained PsyD's may be considered on a case by case basis. Member, Academy of Psychological Clinical Science	

Program Description

The Program offers training for five pre-doctoral interns in clinical psychology annually; three (General Psychiatry Track) based in the Department of Psychiatry, and two (Health Psychology Track) based in the Department of Orthopedic Surgery and Rehabilitation Medicine. The internship follows a clinical science model of training and is intended for those individuals whose training and interests emphasize the application of scientific principles within clinical psychology. We welcome applications from members of diverse populations. As an internship, we endeavor to foster an atmosphere that supports diversity of experiences as well as opinions. Theoretical and therapeutic orientation of the training staff is quite diverse, including cognitive, behavioral, interpersonal, psychodynamic, and systems approaches.

Program Description

The internship offers a multitude of placement opportunities. We have three placement hubs (with separate match numbers to allow applicants to prioritize location) in three areas of the state: the Madison, the Milwaukee, and the Oshkosh-Appleton-Green Bay areas. Two or more interns are assigned to each hub. Each intern is assigned from two to four primary rotations based on the intern's needs and interests (i.e., two rotations at any one time). One rotation may be for the entire year, while the others are for six months each. One day of the week is devoted to training seminars, group supervision and intern interaction. The internship provides a range of experiences in basic clinical practice with a diverse population including assessment, individual and group psychotherapy, crisis intervention, and consultation with other staff. Weekly training seminars are conducted with interns from other Wisconsin predoctoral internships. In addition, interns may visit and tour other correctional facilities in the state. Although this internship takes place in a correctional setting, the experiences are carefully selected to provide interns with general clinical experiences. The interns usually provide services to male and female correctional clients in both community and institutional placements. The internship primarily serves adults. Interns work with offenders who have a range of Axis I and Axis II disorders. The focus is on providing a fclinical§ rather than only a fcorrectional§ internship experience. Interns are required to present (in Group Supervision) an inter-generational family genogram of their family of origin, and if applicable, family of creation. They are to examine how such things as birth order, sibling gender, parental illnesses, family roles, and family losses serve as assets or liabilities to their own development as psychologists. They can disclose as much as they are comfortable with. The Group Supervision is confidential. We provide an extensive didactic training sequence. Last years' didactic topic included: Aggression risk assessment; Bipolar disorder; Competency Evaluation; Counseling LGBTQ; Detection of Malingering (1) Instruments and (2) Theory; Diversity and socioeconomic class; Gangs in Wisconsin; Genograms; Grammar and Writing; Hare's Psychopathy Checklist-Revised; How Different are Female Sex Offenders?; How to prepare a manuscript; Intern Colloquium; Interventions with Gender Dysphoric Inmates; Licensure in Wisconsin; Malingering; Managing Stress in a Stressful World; Mental Health Law; Mental Status Exam; Mock Trial; Motivational Interviewing; Neuropsychological Assessment: overview; Not Guilty by reason of Insanity; Personality Development and Structural Diagnosis; Positive Psychology; Psychopharmacology Seminar; Richard Rogers on Malingering; Rorschach Refresher; Schizophrenia; Sex Offender Evaluation; Static 99; Supervision: process and goals; The MJTC treatment model Trauma Treatment; Using the PAI; Working with Minorities. Note: Topics are subject to change annually.

Program Description

The Wisconsin Internship Consortium in Professional Psychology (WICPP) is an APPIC-member predoctoral internship program that provides advanced training internships from consortium-affiliated training sites. WICPP sites include hospital settings, private practice, university counseling centers, and a university-based center for developmental disabilities. The Wisconsin Internship Consortium offers 2000 hour placements for psychologists-in-training to work with children, adults, and families. WICPP administration, supervision, and training occurs at the Educational and Psychological Training Center (EPTC) at the University of Wisconsin-Madison. Interns participate in specific learning activities and experiences at their WICPP-affiliated training sites, as well as seminars, supervision, and other professional development experiences at the EPTC. Established in 1994, more than 60 students have completed their predoctoral psychology internship at WICPP and currently work as licensed psychologists in academic, clinical practice, and consultation settings. The internship training program is organized around the guidelines and principles of the Office of Program Consultation and Accreditation of APA, APPIC, and the Wisconsin Department of Regulation and Licensing. For school psychology interns, criteria endorsed by the Council of Directors of School Psychology and the National Association of School Psychologists are also followed. The internship is designed to fulfill the training standards of APA, APPIC, and the requirements of the State of Wisconsin for psychology licensure. WICPP is implemented in accordance with the APA Ethical Principles of Psychologists and Code of Conduct (APA, 2010). WICPP is partially-affiliated with the University of Wisconsin-Madison, which means that qualified intern applicants from UW-Madison's psychology programs are ranked above other candidates and qualified intern applicants from other programs are also ranked.

Program Description

The program requires interns to demonstrate competency in five broad areas: Ethics/Professional Behavior, Theoretical/Conceptual Skills, Psychological Assessment, Psychological Interventions, and Consultation/Team Treatment. The basic philosophy of our program is to provide the maximum flexibility in allowing interns to develop those interests and abilities which best prepare them for the career specialty of their choosing. We attempt to offer a wide variety of experiences, both to provide a well-rounded program for students who require a basic grounding in many areas of professional psychology and also to provide opportunities for specialization for those interns whose experience and career interests make this the preferred option. There are training options available in both inpatient and outpatient settings with both medical and psychiatric patients.

Program Description

Lakeview is a comprehensive neurobehavioral treatment center. We offer a comprehensive range of services to adults and children in our long-term acute care hospital, adult residential, and child-adolescent residential settings including neurobehavioral treatment, special education school, and interdisciplinary neurological rehabilitative treatment programs. Psychology services include psychological and intellectual testing, neuropsychological assessment, completion of comprehensive reports, cognitive behavior therapy, behavior analysis, individual, group, and family psychotherapies, staff consultation and training, participation in interdisciplinary staffings and seminars. The Lakeview Internship employs a variety of training methods (e.g., individual and group supervision, observation, demonstration, working with members of a multidisciplinary treatment team, seminars, etc.). We provide exposure to a wide range of patient populations (e.g., age 7 through old age, diverse medical and psychological/behavioral challenges and co-morbidities). Interns will work primarily within the child and adolescent program, which houses an inpatient residential treatment, out patient day treatment, and school program. Primary diagnoses include autism spectrum disorders, ADD and ADHD, learning disorders, conduct disorders, complex medical disorders, and various neurological disorders. A minor rotation provides opportunities to assess and treat adults with acquired neurobehavioral and complex medical disorders in a longterm acute care setting.

Program Description

Coordinated by the Rogers Center for Research and Training, the pre-doctoral internship program at Rogers Memorial Hospital offers a broad range of experience working with child, adolescent, and adult populations. Through these experiences, the interns develop the skills and confidence needed to begin their career as practicing clinical psychologists. Interns are challenged and offered the support and supervision needed to be effective in their roles. There are two interns placed at the Child/Adolescent Day Treatment Program in Milwaukee and one intern placed at the OCD and Anxiety Disorders Program in Oconomowoc. Interns placed in the Day Treatment Program will refine their clinical skills by: completing diagnostic interviews and assessments, participating in interdisciplinary treatment team meetings, creating and monitoring measurable treatment goals and interventions specific to patient diagnoses. Healthcare (RMBH) is a private practice in Casper and Gillette, Wyoming. RMBH provides individual, group, and consultation services to a general population of children, adolescents, and adults with mental health needs. RMBH works closely with clinic physicians and is a National Health Service Corps provider. University of the Rockies Counseling Center in Colorado Springs, CO, provides low-cost psychotherapy and assessment to children, adults, couples, and families.

Program Description

The Rocky Mountain Psychology Internship Consortium (RMPIC), located in Colorado and Wyoming, serves diverse and underserved populations. Both sites employ evidence-based best practice guidelines. To foster an intern's development as an independent scientist-practitioner, didactics and supervision focus on developing the skills and confidence to function independently as a psychologist in a multidisciplinary setting. In addition to site-specific didactic training, Consortium-wide didactic presentations by RMPIC psychologists occur weekly. Interns are trained in and evaluated on their performance of six Core Competencies: Assessment and diagnosis; Documentation and report writing; Therapy: treatment planning and interventions; Interdisciplinary collaboration; Research and outcome evaluation; and Professional behavior, including diversity issues. The Rocky Mountain Behavioral accreditation for the Internship.

Program Description

A unique, APA accredited internship emphasizing psychoanalytically-oriented training. PRIMARY EXPERIENCES: Treatment and assessment of adults with developmental disabilities and co-occurring severe psychological disorders commensurate with typical inpatient psychiatric populations, but in community-based setting. Opportunities for year-long treatment with the same caseload of individuals and groups, multiple sessions per week in some cases. This is an underserved population of people who provide unusually rewarding therapy experiences and challenges, frequently demonstrating their integrity and bravery in the face of hardship and histories of abuse and discrimination. Under supervision, interns are placed at the head of multidisciplinary treatment teams for their assigned clients, resulting in rapid professional growth and leadership skills. SECONDARY EXPERIENCES: Intensive outpatient substance abuse tx/aftercare and SA assessment with clients from local rural communities; plus private outpatient mental health. DIDACTIC SEMINARS include weekly, year-long study of seminal papers in psychoanalysis. Other seminar topics include working with regressed clients, interpretation and metaphors in psychotherapy, transference and countertransference, aggression, sexuality, projective assessment, role of culture in tx, models of brief psychodynamic psychotherapy, personality disorders, a 12-wk group-psychotherapy seminar, and other topics on psychopathology. SUPERVISION (per week): 2 hrs face-to-face individual with primary supervisor; 1 hr group sup. with training director; 1 hr sup. of group tx; 1 hr substance abuse sup. OTHER ACTIVITIES: weekly staffings for mental health and substance abuse clients. LOCATION: Spectacular high desert. Easy access to Yellowstone, Grand Teton, Arches National Parks; Sundance Film Festival. World class skiing, biking, backpacking, rock climbing. Metro amenities in Salt Lake City and Park City, Utah.

Program Description

PRIMARY ROTATION: Adult Acute Inpatient Services (APS) year-long primary rotation with an adult population who present with highly challenging complex problems including severe and persistent mental illness or other major mental illnesses often co-occurring with substance abuse or dependence, personality disorders, intellectual or other developmental disabilities, and/or medical illness. Interns have the opportunity to work with medical/geriatric and forensic populations as part of their training. Training involves developing 6 core competency areas: (1) assessment/diagnosis, (2) individual therapy, (3) group therapy, (4) consultation/working with a multidisciplinary team, (5) individual differences and cultural diversity, and (6) ethics/professionalism. Interns may choose additional competencies. Interns receive 4 hours of supervision per week (2 hours group and 2 hours individual supervision). Supervision is based on developmental models (i.e., assessing initial skill level, leading to increased responsibility and independence with the goal of being ready for semi-autonomous practice and postdoctoral positions at the completion of internship). Interns have weekly didactic seminars on a variety of topics. Supervisors work alongside interns on treatment units and co-facilitate groups with them. Length of stay on the acute unit is variable, with typical length of stay lasting 30-90 days, with some longer-term stays. Interns have the opportunity to provide both brief and longer-term therapy. Training experiences are tailored to intern training needs and tend to result in about 50% of time devoted to group/individual tx and 50% to assessment (including intakes). Former interns have been very successful in finding post-docs, jobs in hospital, CMHC, VA, prison, private practice, and university settings. WSH does not have and Mindfulness-Based Cognitive Therapy. In addition, we train the theoretical underpinnings of ACT, Relational Frame Theory. Students interested in these treatment approaches are encouraged to apply.

Program Description

The mission of the Sheridan VA Medical Center's internship training program is to provide 2 interns each year with a rigorous yet supportive training environment designed to help them develop the knowledge, skills and abilities necessary to enter the professional practice of psychology. We are particularly interested in developing psychologists who have interest in working with veterans in underserved rural areas. Psychologists working in rural areas need to be generalists to a large degree so a major goal of our program will be to produce psychologists with a generalist perspective.

Program Description

The Internship offers exposure to a wide variety of diverse and complex clinical problems, populations, and professional roles within the area of child clinical and pediatric psychology. The training staff is comprised of psychologists whose backgrounds span the range of clinical, counseling, educational, developmental, health psychology, and who are able to offer interns a broad range of theoretical orientations and practical approaches. The primary training method is experiential (i.e., direct service delivery) and supervision plays a central role in the learning process. Supervision is augmented by didactic seminars, observation of staff, guided reading, and consultative support. The training is sequential and cumulative, with the intern typically assuming greater responsibility for clinical work and activities as the internship year progresses. Training considerations take precedence over the demands of service delivery. Caseloads are chosen for their educational opportunities in light of the interns' articulated goals and objectives and appropriateness for each intern's level of expertise and skills. In addition to the emphasis on the acquisition of clinical knowledge and skills, considerable attention is directed to the application of ethical and professional standards to everyday practice and the development of a professional identity. Developing and maintaining cooperative and collaborative relationships with other hospital and community caregivers and accessing the scientific and scholarly literature to guide clinical practice are emphasized as enduring functions of successful professional life. Please note: In accordance with the APA Committee on Accreditation decision to stop accrediting programs in Canada, this internship did not apply for re-accreditation by APA. Consequently, with the completion of the 2008 training year (August 31, 2008), APA accreditation of the internship came to an end.

Program Description

The program is flexible, with residents helping to develop their own training program by choosing from multiple modules that we offer across 10 different geographic sites. The residency program includes inpatient and outpatient services in medical, mental health, and forensic settings. Both assessment and intervention training requirements are mandatory during the residency. We have recently changed (September 2013) to a 4 day clinical week with one day for seminars, consultation, preparation, report writing and other activities.

Program Description

We are a consortium composed of a large psychiatric hospital, a rehabilitation hospital, and a large general hospital. We offer two streams - Generalist and Neuropsychology. Five positions are available within the Generalist stream and one position is available within the Neuropsychology stream. Within the Generalist stream we have six rotations (Adult Mental Health, Brain Injury, Eating Disorders, Forensic, Health, and Pediatrics). A resident does not need previous experience in these specific areas to work in a rotation and we focus on the development of a broad range of skills in assessment, treatment, and consultation. For the Generalist stream, residents choose two major rotations, each lasting six months. For the Neuropsychology stream, incoming residents need to have previous experience in neuropsychology. We emphasize a life-span or developmental approach, offering experiences with children, adults, and geriatric clients. Residents spend six months in their primary area of interest (e.g., working with adults), and then spend two three-month periods in other areas (e.g., some time working with children, some time working with geriatric clients). All residents also choose one minor rotation that is one day a week for the duration of the residency year. There is one nonclinical day per week, where residents attend a didactic seminar series, work on a research project and participate in a resident group discussing issues such as development of supervision skills and presentation of cases. Please see our website for more information.

Program Description

We provide three four-month rotations of interdisciplinary rehabilitation of injured workers, giving interns an opportunity to conduct intake assessments, clinical assessments, individual therapy, group counseling, and interdisciplinary team consultation. There is periodic opportunity for couples and family therapy. Primary theoretical orientations of psychology staff are cognitive-behavioral, solution-focused, and experiential; however, there is openness to other orientations being implemented in treatment by interns. While primary rotations typically involve working on an interdisciplinary team, concurrent optional rotations are offered in the areas of neuropsychology, research, clinical assessment, consultation, supervision (of an undergraduate psychology student), industrial/organizational psychology, group therapy, and specialized treatment areas such as PTSD. The internship provides a grounding in health and rehabilitation psychology, as clients present with a variety of physical conditions (acute/chronic pain, fibromyalgia, brain injury) that affect their psychological functioning. Opportunities to treat PTSD are also available. A primary focus is to assist clients in preparing to return to employment, and/or to enhance their quality of life. There are opportunities to develop clinical assessment skills using psychometric tools (e.g., intellectual, academic, vocational, pain, personality, PTSD, neuropsychological instruments). Psychology staff and interns meet weekly for case presentations, article reviews, and inservices. Interns gain wide exposure to other disciplines, including medicine, occupational therapy, physical therapy, exercise therapy, rehabilitation coordination, and employment counseling.

Program Description

The BCMHAS Clinical-Forensic Psychology Internship Programme focuses on forensic assessment and treatment for an adult patient population with complex psychiatric and neuropsychiatric illnesses, along with involvement in the legal system. This is an excellent track for a person who might wish to specialize in forensic psychology. We currently offer rotations at the Forensic Psychiatric Hospital in Coquitlam, as well as several regional outpatient clinics (Vancouver and Surrey, or Victoria). This track is also affiliated with the Mental Health, Law, and Policy Institute (MHLPI) at Simon Fraser University, providing interns with additional opportunities and contacts. We are presently in the process of applying for accreditation with the Canadian Psychological Association and anticipate a site visit in 2014.

Program Description

The VCF PRP recently received accreditation through the Canadian Psychological Association. Supervision and training are provided in the psychological assessment and treatment of children and youth and families within a multidisciplinary community mental health team. There were 17 CYMH teams and 2 within-region Eating Disorder programs located within the Lower Mainland in the municipalities/cities of Delta, Burnaby, New Westminster, White Rock, Surrey, Langley, Tri-Cities, Maple Ridge, Mission, Abbotsford, Chilliwack and Hope. Each year one resident is placed in the TriCities office and works with Dr. Cheryl Conant and Dr. Susan Hackett. The second resident is placed in one to two offices, depending on the number of supervising psychologists available in the second office. The second placement changes yearly, rotating among the psychologists working within the Child and Youth Mental Health have the opportunity to supervise practicum students and work on a multi-disciplinary team.

Program Description

The Predoctoral Residency in Clinical Psychology offers four full-time predoctoral internship positions. Four training sites facilitate the residency experience; Vancouver General Hospital, St. Paul's Hospital, University of British Columbia Hospital, and the GF Strong Rehabilitation Centre. Most psychology residents will select training modules in several sites and every effort is made to coordinate their schedule to minimize travel time. Interhospital shuttles depart frequently to facilitate easy movement to and from each site. The resident can also participate in research during the course of training. Seminars take place throughout the year. Residents apply and are accepted for a position in one of the two tracks offered. There are also rotations offered in health psychology that can be integrated into either of the two primary tracks as appropriate. Adult Mental Health Track (up to 2 full-time positions available)Neuropsychology Track (up to 2 full-time positions available). The Neuropsychology Track provides residents with intensive experience in the theory and practice of clinical neuropsychology. Rotations include geriatric psychiatry, a neuroscience program, epilepsy service, a hospital-based neuropsychology service, the acquired head injury program at GF Strong Rehabilitation Centre, and the Alzheimer Clinic at UBC Hospital. The Adult Mental Health Track provides residents with experience in psychological assessment and treatment in psychiatric inpatient settings. Treatment experiences include individual therapy and group therapy, using a wide range of approaches from CBT to Motivational Interviewing and DBT. A number of Health Psychology rotations are available as elective rotations within any track.

Program Description

The mission of our internship is to provide excellent clinical, ethical and professional training to enable interns to become highly competent, caring clinical psychologists able to function in complex, interdisciplinary healthcare settings. You will receive training in the psychological assessment, treatment and rehabilitation of children and youth with a wide range of acute and chronic medical and mental health conditions. This includes dealing with problems such as coping with pain and loss, adjusting to physical or mental disability and/or handicap, dealing with the stress of illness and injury, and understanding how medical conditions affect family dynamics. While the intern will be at the Children's Hospital site for the majority of the time, there may be opportunities for a rotation at the Sunny Hill site. Children's and Sunny Hill are both part of Children's & Women's Health Centre for British Columbia. BCCH is a tertiary care facility and the main referral centre for children from birth to 16 with complex medical problems from throughout BC and the Yukon. As a department we have pursued an integrated mix of clinical services, training and teaching, and research and community partnerships. We offer a wide range of diagnostic services and consultations with care teams in the hospital and community. We provide short-term therapeutic interventions and longer term psychotherapy. We conduct regular seminars on difficult ethical and patient related issues and attend a wide range of rounds and presentations available in the hospital. Sunny Hill Health Centre for Children is a major provincial resource providing specialized services to children with developmental disabilities and/or rehabilitative needs.

Program Description

The Department of Clinical Health Psychology in the Faculty of Medicine, University of Manitoba, offers eight pre-doctoral residency positions in Clinical Psychology. We have a long history of APA and CPA accreditation, but elected to discontinue our APA accreditation at the end of the 2010-2011 training year, in light of APA's plan to discontinue accreditation outside the U.S. We are accredited by the Canadian Psychological Association through 2017-2018. The goal of our residency is to train generalist clinical psychologists with skills to work in both mental health and clinical health psychology. Five different streams or areas of emphasis are available (Adult, Child and Adolescent, Adult Neuropsychology, Rural, and Northern); however, all residents have the opportunity to acquire knowledge and develop competence in a variety of areas, regardless of the stream they choose. Each stream consists of two six-month major rotations, two minor (4 hours/week) rotations, and additional in-depth supervision of a long-term psychotherapy client (option of adult, child, or both). Residents participate in seminars on professional and clinical issues, case presentations, and teaching rounds. Additional diversity, cross-cultural, and interprofessional experience is also fostered through four mini-minor\$ (half-day) experiences chosen among several community agencies that address the health needs of typically under-served clinical populations. Ample opportunities exist for interprofessional education and academic enrichment by virtue of our department's organization within the University of Manitoba's Faculty of Medicine.

Program Description

Our internship implements a developmental model, with a specific focus on each intern's individual needs. The internship's activities are paced according to the interns' background preparation and readiness to assume various roles and responsibilities. From our initial orientation phase, where the literature on developmental stages of trainees is reviewed and discussed, observation of supervisors, and guided practice that characterize the early stages of our training program, the developmental level and needs of our interns are explicitly valued and addressed. Throughout the course of the training year, at a pace guided by stage of development and training needs, interns are gradually exposed to more complex and demanding training experiences (e.g., developing a group program; supervising a practicum student) and assume more responsibility for their work and contributions to the department (e.g., increased case load; developing an outreach initiative). By the end of the training year, interns will have a clear sense of what it is like to function as a professional psychologist in a fast-paced and diverse service delivery environment. The developmental structure of our internship is greatly facilitated by its eschewal of the traditional "rotation" model of internship training. Our program believes that an intern's professional identity can be most effectively developed through exposure to an environment that closely approximates the actual settings in which professional psychologists practice. For this reason, concurrent experiences are the hallmark of our program. With this structure, interns are able to experience the same range of activities and responsibilities as staff psychologists, see clients based on clinical need rather than rotation length, and develop more substantial relationships with supervisors. Our internship prepares interns to work in a wide variety of settings in generalist based practice with adults.

Program Description

The MUN UCC residency program endorses a training philosophy oriented toward encouraging the professional development of each trainee in the broadest possible terms. We believe that professional helping is a complex task which can, and should, be approached from a variety of perspectives. The training programme offers competency training in eight central areas of professional psychology and exposure to relevant issues and topics such as professional development, program development and evaluation, consultation, working with international students, feminist therapy, and independent practice. The eight core competencies are: individual counseling and therapy, career counseling, group therapy, supervision, outreach and consultation, assessment, applied research, and ethics. Training in each competency area involves four components -experiential, supervision, didactic, and is also available. Assessment and intervention experiences are available through inpatient, day treatment, outpatient and community mental health services. Training in pediatric health psychology with inpatients and outpatients is also available. Residents participate in multidisciplinary teams, have an opportunity to engage in clinical research, and take part in seminars and peer support sessions with other clinical psychology residents in Nova Scotia. We have two pediatric residency positions within our General Psychology track, and one position within our Health Psychology track. For details on how these tracks are organized, please refer to our web-site. The Health Psychology track allows for more concentration in assessment, consultation and intervention with children with medical illness, although residents in the General Psychology track also have opportunities to complete minor rotations in the Health Psychology services.

Program Description

Eastern Health offers a twelve-month pre-doctoral internship in clinical psychology. The program is designed to meet all of the requirements for accreditation by the Canadian Psychological Association (pending application and approval). The annual stipend for the internship is \$30,000, and benefits include vacation, educational, and sick leave, and health insurance.

Our pre-doctoral internship program endorses the scholar-practitioner training model. Whenever possible, didactic training precedes the supervised implementation of learning in the delivery of psychological services. Interns are encouraged to continue developing their skills in scientific thinking as these skills apply to providing evidence-based practice within an interdisciplinary health care environment. Further, as a generalist program, we provide diverse experiences to interns, involving different professional roles, client populations and treatment modalities, both in the area of mental health and in other areas of health care.

Two streams are available within the Eastern Health internship program: Adult Stream (2 interns) and Child and Adolescent Stream (2 interns). Applicants may apply to one or both of these streams.

For each stream, the internship program is designed to provide supervised training in the following core competencies of psychological practice: (1) psychological assessment; (2) intervention; (3) consultation; (4) program development and evaluation; (5) interpersonal relationships; (6) professional standards and ethics; (7) supervision. Training in the core competencies is accomplished through the development of an individualized training program consisting of required and optional rotations. Each stream consists of a required, year long rotation at the primary site for the stream, as well as a required three month assessment rotation (2 days/week) and required 3 month supervision rotation (2 days/week). Interns will also choose one or two additional optional minor rotations. Optional rotations provide specialized opportunities to address core competencies or individualized training goals.

The typical breakdown of an intern's weekly schedule is: Major Rotation (Outpatient Mental Health Clinic) 2 days/week Minor Rotation(s) 2 days/week Seminars/Group Supervision. 5 days/week Professional Development. 5 days/week Consistent with the CPA accreditation criteria, interns are provided a minimum of four hours per week of supervision, including three hours of individual supervision, and one hour of group supervision. Interns from both streams participate together in group supervision and a two hour weekly Intern Seminar. For more complete information about our internship program, please see our website.

Program Description

The Nova Scotia Capital District Mental Health Internship in Clinical Psychology is a network of inpatient and outpatient mental health settings affiliated with Dalhousie University. Our main inpatient facility is the East Coast Forensic Psychiatric Hospital, a centre for forensic mental health assessment and treatment. Outpatient mental health work takes place at hospital and community-based clinics in Dartmouth, Halifax and Bedford-Sackville. An outpatient rotation in the assessment and treatment of sexual offenders is also offered. Neuropsychology services involve consultation with these inpatient and outpatient mental health services. Our program offers major rotations in the areas of Adult Mental Health, Forensics (inpatient and sex offender), Neuropsychology, Eating Disorders and Medically-Unexplained Symptoms. Interns choose two six-month major rotations (a rotation can involve more than one setting/location). The Adult Mental Health rotation is mandatory. Minor rotations in clinical supervision, program evaluation, long-term psychotherapy and seniors' mental health are available. Other training opportunities may be arranged in rural shared care, psychosocial rehabilitation and early psychosis. Interns appreciate the flexibility and range of available minor rotations to complement their work on major rotations. Minor rotations are optional. Training rotations are tailored to interns' training needs and interests, to the extent that supervisors are available. Training in cognitive-behavioral, interpersonal, and psychodynamic approaches are offered, as is group therapy. Interns attend an educational seminar series with other pre-doctoral interns from the region as part of their training. Funds are available for education training opportunities during the internship year. Applied research opportunities are also numerous within the internship.

Program Description

Please read our on-line brochure. Select Brochure on Internship/Residency Program link as above. Briefly, we are located in Halifax, Nova Scotia (our license plates say this east coast province is "Canada's ocean playground"). The QEII HSC is a medical teaching hospital and the Department of Psychology offers rotations in 3 Areas: (1) Health (internal medicine, diabetes, cardiology, oncology, HIV, pain, transplant, multiple sclerosis, family medicine, sleep), (2) Neuropsychology (degenerative disorders, vascular disorders, epilepsy, acquired brain injury), (3) Geriatrics (clinical, geriatric neuropsychological interventions, plus neurodegenerative neuropsychology qualifies as a geriatric rotation). The Areas of Health and Geriatrics are considered important opportunities to gain experience in general clinical/mental health psychology practice but with the additional (sometimes presenting) problems of behavioral medicine and gero-psychology issues. We support two internship/residency positions and particularly welcome applicants using a scientist-practitioner model/orientation. We require a combined minimum of 300 hours of supervised assessment and intervention experience.

Program Description

The IWK Health Centre serves the population of the Maritime Provinces and is a tertiary care centre affiliated with Dalhousie University. All staff follow a family-centred care philosophy, recognizing and respecting the family as a vital part of the health care process. Psychological services are provided to children and adolescents with a wide range of pediatric, developmental and mental health disorders, on an inpatient, outpatient and day treatment basis. As an resident, you will receive extensive, supervised experience with a variety of populations and presenting problems in children and youth aged from preschool to 19 years. You will acquire skills in diagnostic assessments, psychological assessments (e.g., psychoeducational/ cognitive), consultation, and evidence-based intervention, as well as program evaluation and supervision. Supervised experience with a Forensic population 40% focus on Developmental Services and 60% Autism Specialty (Autism Specialty Stream). All interns are required to participate in the Intensive Behavioral Intervention (Toronto Partnership for Autism Services) rotation (2 days per week) and are required to select at least 2 of the Developmental Services rotations. Developmental Services rotations are based on age group with Infancy and Early Childhood, Children and Youth, and Adult choices available. For the intern in the Autism Specialty Stream, a third day per week will be spent doing a TPAS Eligibility Screening rotation. For the intern in the Developmental Services Stream, a third day per week will be spent in a Developmental Services rotation.

Program Description

This APA and CPA-Accredited program is committed to a scientist-practitioner approach to education and practice. As such, the training of residents emphasizes the delivery of evidence-based assessment and treatment approaches. Many members of the clinical training faculty contribute regularly to the scientific literature, and all faculty are committed to keeping abreast of the latest research in their respective fields. The program supports the concept of psychologists acting in multiple roles. Faculty at St. Joseph's are seasoned clinicians, managers, trainers, authors, and advocates for important professional issues. The Residency Program provides opportunities to participate in a range of professional activities and to interact with colleagues from a variety of other disciplines. The primary objective of the Residency Program is to provide a comprehensive predoctoral training experience that assures the development of adequate levels of proficiency across basic areas of clinical psychology, including assessment, therapy, consultation, attention to issues of diversity, professional issues, and clinical research. These core competencies are supported through (1) supervised rotations involving provision of clinical services, supervision, team meetings, research opportunities and case conferences; and (2) didactic seminars provided by the Residency Program faculty. In addition, residents are encouraged to attend various didactic rounds both at St. Joseph's Healthcare and McMaster University. Major or minor rotations are available in: anxiety disorders, mood disorders, dialectical behavior therapy, eating disorders, forensic services, health psychology/behavioral medicine, neuropsychological assessment, and schizophrenia and severe mental illness. Long term psychotherapy is available as a minor rotation. A neuropsychology stream with opportunities for more intensive training in clinical neuropsychology and intervention has been added.

Program Description

The Kingston Internship Consortium provides psychological services within Southeastern Ontario through five participating agencies, Ongwanada (Psychological Services & Community Behavioral Services), Queen's University Faculty of Health Sciences, Department of Psychiatry (Developmental Disability and Psychiatric Disorder), Providence Care (St. Mary's of the Lake; Mental Health Services Dual Diagnosis Consultation Outreach Team, Geriatric Psychiatry, Regional Community Brain Injury Service), Child Development Centre & Pathways for Children and Youth. Under the supervision of registered psychologists, the intern will provide a full range of psychological services to individuals with disabilities (developmental and acquired) across the life span (as well as their families and caregivers) who have, or are at-risk for, developmental, behavioral, psychiatric, physical or neurological problems. The intern will be exposed to a variety of clinical opportunities, theoretical approaches, and service delivery cultures. Skills to be developed include: (a) interview techniques, (b) psychometric, clinical, developmental, functional, adaptive, cognitive, ecological and behavioral assessments and the related functions, (c) writing a variety of reports, (d) communication of assessment findings, (e) behavioral and cognitive-behavioral interventions, family counseling, individual therapy; (f) parent, teacher and staff training (g) ethical/professional practice habits. There will also be opportunities to participate in ongoing applied research and program evaluation, as well as involvement in the supervision of Community College students and clinical psychology graduate students and behavior therapists. Opportunities vary among sites and the aim is to train through both breadth (ex., 1 adult rotation of the 3 for a child focused intern) and depth (ex., focus on developmental (2 rotations) rather than acquired (1 rotation) disability) rotations.

Program Description

The Correctional Service of Canada (CSC) offers a Pre-Doctoral Internship Program in Clinical Psychology. The purpose of the CSC Pre-Doctoral Internship is to provide education and training for clinicians in order for them to meet both the requirements for completion of a doctoral degree as well as to facilitate registration as a Psychologist, with competencies in the areas of clinical and correctional/forensic psychology. CSC ascribes to a scholar practitioner model of training and accepts applicants from both PhD and PsyD programs. Applicants must be Canadian citizens or permanent residents, although Canadians who are attending US-based doctoral programs are of course welcome to apply.

There are two internship tracks: The Kingston, Ontario track offers two positions, located in and around the Kingston region. These position focus on applications of clinical psychology to male federal offenders. Each intern will complete three rotations at three different federal institutions

The Kitchener, Ontario track offers one position, based at the federal women's institution in Kitchener and includes two rotations at this facility (Grand Valley Institution for Women) and one community based rotation which may be a nearby community such as Hamilton or Toronto.

Both tracks also require that the intern have a serviceable vehicle and valid driver's license.

Program Description

The London Clinical Psychology Residency Consortium is a fourteen predoctoral resident consortium and includes: 6.0 residency positions funded by London Health Sciences Centre (LHSC), 4.5 residency positions funded by St. Josephs Health Care (SJHC), 2.0 residency positions funded by Student Development Centre-Western University, 1.0 residency position funded by Child and Parent Resource Institute (CPRI), 0.5 residency positions funded by Vanier Children's Services (Vanier). This citywide consortium has 14 full-time positions: 4 Adult Mental Health, 2 Health/Rehabilitation, 3 Child/Adolescent, 3 Neuropsychology (2 Adult, 1 Pediatric), Counseling. Our predoctoral residency consortium emphasizes training in clinical service, teaching, and research. Our aim is to prepare residents for post-doctoral supervised practice in psychology, particularly within the health care system. While clinical training is emphasized, the scientist-practitioner model serves as the philosophical basis for clinical practice as well as educational and research endeavours. Staff work to maintain both an empirical basis to practice and clinical relevance to research. Our predoctoral residency consortium's goals are: 1) To provide residents with broad-based training in clinical psychology; 2) To increase residents' appreciation and understanding of individual differences, including multicultural issues; 3) To facilitate the consolidation of residents' professional identities as psychologists; 4) To facilitate the development of skills in providing patient-centred care as part of an interprofessional health care team; 5) To facilitate residents' integration of research into their professional role; 6) To integrate consideration of supervisory issues into all components of the predoctoral residency programme; and 7) To maintain the receptivity to feedback from the residents regarding all aspects of their training programme.

Program Description

The internship focuses on developing a wide range of clinical and consulting skills as well as an appreciation for the ethical and professional issues involved in working as a psychologist in a tertiary care pediatric hospital. There are two training tracks, Child Clinical Psychology and Pediatric Neuropsychology. Trainees receive intensive supervision in cognitive/neuropsychological, personality, family and behavioral assessment, consultation, individual and group therapy. Trainees in the Child Clinical track participate in family therapy training while those in the Pediatric Neuropsychology Track engage in a range of additional neuroscience activities appropriate to training in neuropsychology. Seminars in clinical and professional issues, cultural and individual differences are a core part of our training. During the year, trainees in the Child Clinical track participate in two major rotations (6 months each) while those in the Neuropsychology track follow one major rotation in neuropsychology, which spans two clinical programs. All trainees complete two minor clinical rotations (1/2 day per week). Major rotations are offered in Health Psychology, Outpatient Mental Health, Child or Adolescent Inpatient Mental Health, Neuropsychology, Child Development/Paediatric Rehabilitation, Autism and Eating Disorders. In all these rotations, residents train within an interdisciplinary team context. There is a strong emphasis on the scientist-practitioner model. Residents also complete a program evaluation project and receive training and practical experience in the provision of supervision.

Program Description

The Ottawa Hospital provides generalist predoctoral training in psychology. We offer 5 positions: four Clinical and one in Clinical Neuropsychology. The Clinical Psychology track has two 6-month rotations in two of the three clinical competency areas; Adult Mental Health, Health Psychology, or Rehabilitation Psychology. The Clinical Neuropsychology track offers two 6-month rotations, one in Adult Acute Care Neuropsychology and one in Rehabilitation Neuropsychology. Regardless of rotations, all five interns receive core mental health training. Core experiences include: psychodiagnostics, individual and group therapy, clinical research or program evaluation project, professional practice meetings, seminar series, and if selected, a supervision of supervision experience. A minimum of 4 hours of individual supervision is provided. The predoctoral training program is CPA accredited for 7 years (2006-2013). Given that APA will no longer accredit international sites we have declined to continue our APA accreditation status beginning in the 2010 training year.

Program Description

The Centre for Psychological Services and Research (CPSR) is a training clinic for the School of Psychology at the University of Ottawa. The CPSR internship is a generalist programme that focuses on the development of an intern's professional skills and identity within the context of the scientist-practitioner model. The mission of the internship is to enable interns to acquire: (1) competence for the autonomous practice of clinical psychology, (2) skills in assessment, intervention, consultation, and supervision, (3) a commitment to ethical standards of professional practice, and (4) a strong sense of professional identity and responsibility.

Program Description

Residents spend a year at the Royal Ottawa Mental Health Centre (ROMHC) or Brockville Mental Health Centre (BMHC) gaining experience in psychiatry and mental health. The ROHCG Residency Program has two tracks, which require separate applications. Four positions are available for the ROMHC site track and one position (Forensic concentration) is available for the BMHC site track. The five residents will engage in the joint seminar series, group supervision and peer consultation (some travel is required). Residents have the option of completing a secondary rotation at the other site (own transportation is required). Additionally, residents gain experience in program evaluation and supervision and have an option of a rotation in community consultation. Residents undertake one full year primary rotation and two-six month secondary rotations over the course of the year. The Royal Ottawa Health Care Group Residency Program in Clinical Psychology received concurrent CPA and APA accreditation from September, 2005 to 2013. A CPA Reaccreditation Site Visit occurred in summer 2013.

Program Description

The Northern Ontario Psychology Internship Consortium offers 3, full-time twelve-month internship positions. Two internship positions are adult and one internship position is child. Residents can apply for either the adult internship or children internship or both, and are accepted for, a position to be working either as an adult intern or child intern. The adult resident will be completing 2 major 6 month rotations at Mental Health Outpatient Programs and Thunder Bay Regional Health Sciences Centre and the child resident will be competing one 12 month rotation at the Children's Centre Thunder Bay. The adult residents will be required to complete 1/2 day a week six month minor rotation at the Children's Centre Thunder Bay and another 6 month 1/2 day a week minor rotation to be selected from a list of available minor rotation experiences. The child resident will be required to choose their minor rotation experiences in the adult population and will also have a list of available minor rotations.

Each resident will have a number of supervisors and a variety of clinical opportunities. Residents work with the Associate Director for each location and the Director of Training to develop an individualized year-long training plan. This process is usually initiated through contact with the resident prior to the start of the internship.

Within all domains of clinical service, collaboration with professionals of diverse professions is emphasized through interprofessional teams and consultation-liaison services.

The purpose of having major and minor rotations is to ensure that residents receive broad-based training in a number of different areas. Each site will offer both major and minor rotation options. These Minor Rotations generally involve one supervisor but experiences are diverse and can vary from a general outpatient service to work with a specific patient population to training in a specific assessment or therapeutic modality

Program Description

The goal of the Predoctoral Internship in Pediatric Psychology at the Hospital for Sick Children is to prepare new psychologists for the varied demands of professional practice in pediatric psychology using a scientist/practitioner model. The program is designed to ensure experience in assessment (psychological/developmental, psychoeducational, neuropsychological), psychological interventions and clinical research. The program follows an evidence-based/best practices approach and a developmental framework to conceptualize a child's needs and challenges in the context of their families, their culture and their language of origin. Interns will have experience with children of all ages who present with psychological problems related to congenital, perinatal, medical, or acquired conditions, or mental health issues. Clinical research is highly valued and closely integrated with patient care activities. Interns also attend a variety of didactic and patient-oriented rounds relevant to their specific rotations, as well as a didactic seminar series and Monthly Psychology Rounds within the Department of Psychology.

Program Description

Holland Bloorview Kids Rehabilitation Hospital is a pediatric rehabilitation facility that provides services for children and adolescents with a wide range of developmental needs and disabilities. We offer both inpatient and outpatient services under two major programs: the Child Development Program and the Brain Injury Rehabilitation Team. Our primary goal is to train future psychologists who are competent in providing clinical services to children and their families. Using a mastery model of training, interns gain experience with diverse health care issues including physical disabilities e.g. neuromuscular disorders (such as spina bifida, arthritis and amputations), neurodevelopmental disorders (such as cerebral palsy, ADHD, and autism) and acquired brain injuries. The internship program provides training in broad-based skills of assessment, consultation and treatment that can be readily generalized to other populations, including typically developing children who may be referred to psychology services in school boards or other community agencies. Following the mastery model, we adopt a developmental approach where interns are expected to assume increased responsibility and independence as the year progresses. Through this approach, interns acquire valuable skills such as conducting comprehensive intake interviews, providing therapeutic feedback (including breaking bad news), conducting standardized assessments as well as learning how to adapt assessments to accommodate varying abilities and needs, formulating differential diagnoses, providing CBT within a group model, as well as counseling to clients and their families about their diagnoses, and consultation to parents, teachers, and other professionals. We insure that interns have opportunities to work with clients from a range of ages (preschool to young adult), diverse cultural backgrounds and a variety of diagnostic groups.

Program Description

The Baycrest Geriatric Health Care System, which provides care and service to approximately 2,500 daily, includes a continuum of care including wellness programs, residential housing, and outpatient clinics. The Neuropsychology & Cognitive Health Program (NCHP) is also responsible for administration of the Neuropsychology Consultation Service at West Park Hospital, a rehabilitation hospital, in Metropolitan Toronto. The program provides psychological and neuropsychological assessment of inpatients and outpatients, in-service support to staff, counseling and education to families, treatment of cognitive, psychological, and behavioral problems, clinical consultation services to health care professionals, memory education and training programmes for healthy, community-dwelling, elderly individuals, cognitive-behavior therapy for depression, and clinical research. The overall emphasis is on neuropsychological assessment and management of cognitive and behavioral problems related to acquired brain damage and neurodegenerative disease. Applicants should be familiar with neuropsychological assessment and have had course work in brain-behavior relationships. All interns do a 6-month major rotation in Neuropsychological Assessment and work on a clinical research project during the year. Memory Intervention with amnesiacs and either healthy elderly or individuals with mild cognitive impairment, is required as a 12-month minor rotation. Didactics span almost the entire year. The major rotation options include: (a) Memory Intervention; (b) Behavioral Management; (c) Neuropsychological Rehabilitation: Clinical and goal management; or (d) Neuropsychological Rehabilitation: Research. The minor rotation options, which encompass 20% time (one day or two half-days per week), include: (a) Memory Intervention; and (b) Clinical Research.

The Psychology Department, in co-ordination with the other disciplines and programs at the Centre, aims to provide an intensive clinical training experience of the highest quality. Supervision is provided in both individual (two to four hours weekly) and small group formats. Numerous seminars are offered (e.g., Child and Adolescent Psychotherapy, Family Therapy, Psychological Formulation and Diagnosis, Infant and Preschool Assessment and Intervention, and Clinical Theory/Therapeutic Action). Applicants should have considerable interest in a rigorous, theoretically integrated (contemporary psychoanalysis, dynamic systems theory, cognitive science) and developmental approach to assessment and treatment as this is the predominant orientation of the Psychology Department. Trainees will also have the opportunity to become familiar with a broad, bio-psychosocial, multi-systemic orientation utilizing individual and family therapy, parent counseling, and community consultation, in accordance with the needs of the case and the training objectives of the student. Trainees carry a case load of 10 hours per week which may include individuals, families, parents and assessments. The emphasis is on the development of a synthesis of personal qualities (empathy, capacity to see patterns in clinical data, etc.) and theory. There is an emphasis on critical thinking and shaping the treatment approach to the emerging needs of each patient.

Program Description

This internship position provides senior level doctoral students with training opportunities to enhance the development of the core competencies required for psychologists as declared in the Mutual Recognition Agreement of the Regulatory Bodies for Professional Psychology in Canada (2004). These opportunities include direct training in assessment, evaluation, intervention, consultation, and research. There are two fulltime internship positions, which begin the first Wednesday in September, and conclude August 31 of the following year. This internship opportunity offers an annual stipend of \$31,824. The internship program offers six rotations spanning Developmental Services and Autism Specialty Services. Two internship opportunities are available: One with a 60% focus on Developmental Services and 40% with Autism Specialty Services (Developmental Services Stream), the second with a Services of the ministry of Children and Family Development in the Lower Mainland. The mission statement of the VCF PRP is to: 1. Provide accessible and timely evidenced-based treatment and support services; 2. Reduce the risk of children developing serious mental disorders by identifying problems early and providing early & effective intervention; 3. Improve child and family mental health by strengthening community and family resilience, and the capacity to support vulnerable and at risk children; and 4. Improve mental health system performance through evidenced-based service provision, improved performance monitoring and accountability using continuous quality improvement strategies. The VCF PRP is to our knowledge the only CPA accredited community-based child and youth internship program in Canada at this time.

Program Description

The primary aim of the Ontario Shores Predoctoral Internship Program is to prepare interns to become competent and autonomous clinical psychologists. Interns will develop skills and knowledge in the areas of diagnosis, assessment, consultation, treatment, as well as professional and ethical issues. The predoctoral internship program at Ontario Shores incorporates a combination of two concurrent rotations over the course of the year for a total of 2000 hours. Potential rotation choices offered: adolescent and young adult (age 12-18; inpatient & outpatient), adult outpatient, inpatient & outpatient forensic programs, assessment and reintegration, psychogeriatric, memory clinic, neuropsychiatry, and dual diagnosis. Each intern is assigned to two supervisors according to their rotations. Each supervisor is a registered psychologist with the College of Psychologists of Ontario. At the beginning of the internship the intern and their advisor set individualized written goals and objectives. Interns are to meet with each supervisor for a minimum of two hours of supervision per week for a total minimum of four hours per student. Aside from weekly supervision, interns participate in weekly didactic seminars designed for psychologists, including journal club discussions, case presentations, and professional development. The topics are founded in current clinical and research driven material related to professional issues, ethical dilemmas, psychodiagnostics, psychotherapy, and rehabilitation.

Program Description

Saskatoon Health Region provides health services to Saskatoon (pop. 225,000), rural areas, and the northern half of the province. Rotations occur at several sites in the city (within 5-15 minutes drive of one another), as well as Prince Albert Mental Health in the Prince Albert Parkland Health Region (1.25 hours drive north in Prince Albert, SK). Residents choose 2 x 6-month major rotations in: Clinical Health Psychology (Peds and Adult); Neuropsychology; Rehabilitation Health; Community Mental Health (Rural/Northern); Child Developmental; Seniors and Long Term Care and Forensic. A variety of minor rotation or specialized training opportunities are available to incorporate within major rotations (e.g., Student Counseling Centre; Chronic Pain Management Centre; Primary Health Centre; Addictions). The resident and the rotation coordinator plan the training experiences on a rotation, and set goals for the resident's competency development in the following areas: assessment, intervention (more than one modality), consultation, personal skills, professional conduct, interpersonal relationships, program development/evaluation, administration, continuing education, and research. Represented theoretical orientations are: interpersonal, cognitive-behavioral, psychodynamic, behavioral, child/client-centered, psychoeducational, systemic, developmental, and solution-focused. Individual supervision w/ registered, doctoral psychologist(s) = 4 hours/week; research = half day/week; seminars on professional, ethical, clinical, and research issues = 2 hours/week. Other experiences include supervising junior clinicians, attending hospital rounds, and in-services. Please visit our website to download a brochure at http://www.saskatoonhealthregion.ca/join_our_team/hp_psychology_internship.htm

Program Description
At the Barrow Neurological Institute, St. Joseph's Hospital and Medical Center (SJHMC), individuals have the unique opportunity to be exposed to a wide variety of patients with neurological conditions. U.S. News & World Report has named SJHMC one of the 10 best hospitals in the United States for Neurology and Neurosurgery. In addition, St. Joseph's has been recognized nationally as one of the Top 100 Best Places to Work in Healthcare by Modern Healthcare. Barrow Neurological Institute, the neurological division at St. Joseph's, has long been recognized for providing state-of-the-art care for people with brain and spine disease, disorders, and injuries. There are over 20 neurosurgeons on site as well as a large neurology department including a movement disorders program, stroke center, and comprehensive epilepsy program. The residency (fellowship) program is two years. Residents in clinical neuropsychology are involved in direct patient care in several settings. Those settings may include the Inpatient Neurorehabilitation Unit, the (outpatient) Center for Transitional Neurorehabilitation, the Epilepsy Monitoring Unit, the Outpatient Neuropsychological Consultation Service, the Muhammad Ali Parkinson's Center, and the Inpatient Neuropsychological Consultation Service. Our department also participates in a number of ongoing clinical research trials. Our setting is primarily dedicated to patient care, with heavy clinical demands placed on the resident. However, there is a strong interest and support for research and education. We believe this provides an excellent training setting. In return for the clinical services provided by the residents, the staff neuropsychologists in the Section of Clinical Neuropsychology provide clinical supervision, teaching seminars, and research opportunities.

Additional Information About Training Opportunities**Program Description**

The ASU Counseling Services (ASU CS) Postdoctoral Residency is a 2000 hour, 12 month program designed to provide advanced training for professional and leadership roles in university counseling center settings. The program uses a developmental-practitioner training model and training activities are focused on developing existing skills through a range of professional activities, training, and feedback. Residents provide individual and group therapy, outreach, consultation, crisis intervention (both daytime and after-hours), and may supervise masters or doctoral level advanced practicum students. In addition to consolidating general clinical skills, residents engage in professional activities and receive training in a focus area related to their career interests. Available focus areas include: - training administration- wellness psychology- counseling center administration/residential life consultation. Besides clinical and focus area training, residents participate in agency staff meetings, staff development programs, and agency committees and teams. ASU CS has a multidisciplinary staff, including psychologists, counselors, social workers, and psychiatrists. Its mission is to serve a diverse student population, and models and promotes the valuing of human differences on individual, organization, and community levels as well as the facilitation of human potential.

Program Description

The Arizona Psychology Training Consortium is a non-profit subsidiary corporation of the Arizona Psychological Association. The Consortium was developed to create internships and postdoctoral residencies. School psychology, neuropsychology, sex offender treatment, inpatient psychiatric, outpatient Native American community health, and private practice sites are available. There are few clinical rotations among the training sites. Each of the residencies provides advanced training in assessment, psychotherapy, cultural diversity, and independent practice. Residents participate in two-day didactic training events each month. There can be significant travel to some of the monthly training events. Training opportunities are provided by academicians and practitioners from several Arizona universities, community agencies, and practices. There is a selection preference for applicants from Arizona universities and internship programs, but applicants from any regionally accredited Clinical, Counseling, or School Psychology program are encouraged to apply. Applicants must send at least two complete application packets. One complete application packet goes to the Consortium. Also send one complete application packet to each individual training site of interest. Please review the application procedures described on the Arizona Psychological Association website at www.azpa.org. During the application process, frequently check the website for new Consortium training opportunities.

Additional Information About Training Opportunities

<html />

Program Description

Four full-time 12-month postdoctoral fellowships beginning September 1, 2013. Pediatric Psychology and Neuropsychology Postdoctoral Fellowships are available. Fellows in pediatric psychology receive training in various activities including pediatric inpatient consultaton/liaison, participating in a variety of outpatient multidisciplinary medical clinics in pediatrics. Over 20 diverse rotation experiences are offered including involvement with TBI, SCI, autism spectrum, obesity, sleep disorders, chronic pain, palliative care, cardiology, asthma, CF, vent-dependent, burn, ADHD, learning disorders, neurodevelopmental disorders, etc. Fellows in pediatric neuropsychology receive training with various populations including epilepsy, head injury, neuro-oncology, and various disorders impacting the CNS. TRAINING PROGRAM The Pediatric Psychology fellowship is part of a comprehensive interdisciplinary training effort in the Department of Pediatrics at the University of Arkansas for Medical Sciences. Training sites include the J. L. Dennis Developmental Center and Arkansas Children's Hospital (ACH). The fellowship is partially funded by the multi-site LEND grant that provides training in neurodevelopmental disabilities. SETTING The Department of Pediatrics at the University of Arkansas for Medical Sciences has over 200 faculty members, including 18 psychologists. The Department provides its clinical services through Arkansas Children's Hospital (ACH). ACH is one of the largest pediatric hospitals in the nation and provides outstanding clinical facilities. As the capital city of Arkansas, Little Rock provides many of the benefits of living in a large city without the negative aspects, such as traffic congestion and high cost of living. The population of the greater Little Rock areas is approximately 500,000. Little Rock is located in a picturesque setting in the foothills of the Ozark Mountains.

Additional Information About Training Opportunities

<html />

Program Description

Our goal is to prepare trainees for an advanced level of competence in the practice of Clinical Psychology. Two tracks emphasize Serious Mental Illness/Psychosocial Rehabilitation and Post Traumatic Stress Disorders work. One PTSD fellow and two PSR/SMI fellows are usually chosen each year. Persons with training and experience in these areas are especially competitive applicants. Integral training components include direct service, strong didactics and supervision, development of supervision skills and professional development activities. Fellowship training includes required core experiences based on the chosen area of emphasis, as well as options based on the learning and training goals of each fellow, whether clinical, research and scholarship, or other areas of professional development. The PSR fellowship involves ongoing work with fellows and staff of other disciplines. Fellows interact with our APA-accredited interns throughout the year. Our strength lies in the rich diversity of clinical opportunities available and the supportive and collaborative stance of staff toward fellows. We believe that postdoctoral education and training is primarily experiential through supervised service delivery, with an emphasis on ethical and legal considerations, individual and cultural diversity, evidence-based practice and professionalism. The training staff promote professional development of the fellow as a clinician, consultant, clinical scholar, supervisor, educator, program innovator, interdisciplinary team member and consumer advocate. We strive to provide exemplary postdoctoral training consistent with a practitioner-scholar model and a biopsychosocial, recovery-oriented approach. We accept application materials (paper or electronic) in one packet or separately, if received by deadline. Letters of reference sent via email should be sent from supervisor's work email. Note: VA physical exam & drug screen are required by start of fellowship.

Additional Information About Training Opportunities

Program Description

Residents will be responsible for providing: (a) individual, couples, and group therapy; (b) assessment and referral services; (c) crisis intervention and on-call services; (d) outreach programming; and (e) psychological consultation to the campus community. Residents may also have involvement in training and supervision of practicum students through Humboldt State University's Master's level Counseling and Social Work programs. Residents will receive both individual and group supervision commensurate with the requirements for licensure. Although the training is in brief therapy, each resident may carry one longer term client. CAPS is housed in the Health & Counseling Center building on campus. Each resident will have a private office, with computer and internet access, and an assigned video camera to use for clinical supervision purposes. The counseling facility includes a group room, a professional library, and a staff kitchen. CAPS currently consists of six professional therapists working as a team. Peer consultation is emphasized and constantly utilized in a supportive and collegial atmosphere. The staff is especially interested in residents who will support this type of work environment. Residents will engage in both formal and informal supervisory contact with all professional staff. In addition to supervision, residents will participate in our weekly case conference and training seminar. Humboldt State University is located on the northern California redwood coast, in the community of Arcata (pop. 13,000). The hillside campus overlooks Humboldt Bay and the Pacific Ocean, amidst the surrounding Redwood forest. As one of the smaller campuses of the California State University system, with about 8,000 students, HSU is known for its open and friendly campus environment.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
Still a postdoctoral fellow			1
Veterans Affairs Medical Center			1
University Counseling Center	3	1	3
University Teaching Faculty		1	

Program Description

The postdoctoral fellowship program is committed to providing comprehensive training experiences that will facilitate postdoctoral fellows' development as independent professional psychologists. A primary goal of the program is to assist fellows in strengthening and consolidating their clinical and professional skills and integrating these skills into their professional identities as psychologists. The postdoctoral year marks a significant developmental transition of fellows from trainees to well-rounded, independent professionals. It is expected that fellows will be able to function competently and autonomously by the end of the training year. The fellows will receive advanced clinical training and supervision in brief therapy and crisis intervention in a multidisciplinary, multicultural university counseling service. The responsibilities of the fellows include: Intake assessment Crisis intervention Individual personal and career counseling Co-facilitation of structured CBT and/or process groups Providing workshops Outreach to the campus community Special projects as needed (e.g., groups, outreach, research) Postdoctoral fellows typically provide 20-22 hours of clinical work per week, which includes intakes, groups, brief individual and couples therapy, and a 3-hour crisis on-call shift. Postdoctoral fellows receive 2 hours of individual clinical supervision, one hour of group supervision, and participate in a weekly multidisciplinary case conference. Additionally, postdoctoral fellows participate in a weekly Professional Development seminar and spend 2 hours per week working on a project/apprenticeship and 1 hour per week receiving supervision for this project.

Additional Information About Training Opportunities

Program Description

Casa Pacifica is a residential treatment center and a non-public school for emotionally disturbed adolescents within the community. We also offer temporary shelter for abused and neglected children and adolescents as well as transitional aged youth services through our CITY (Coaching Independence in Transitional-Aged Youth) program. Our two-year postdoctoral program offers advanced general training in child and adolescent clinical psychology with emphasis on community mental health. Our training program is an organized experience which, in contrast to on-job training, is designed to provide the Fellow with a planned, programmed sequence of supervised training experiences. We also provide advanced clinical training in cognitive-behavioral interventions, crisis management, brief and long-term psychotherapy, group therapy, and consultation. Our supervision satisfies California licensing requirements. To be eligible, applicants must have completed a doctoral program in clinical or counseling psychology and preference is given to applicants from programs with APA accreditation. Admission requirements include completion of all professional doctoral degree requirements from a regionally accredited institute of higher education or an APA/CPA-accredited program and completion of a Predoctoral internship that meets APPIC standards. Applicants must provide a letter from the director of the graduate program that stipulates the applicant has completed requirements for the doctorate and will graduate by the starting date of the Fellowship. WE REQUIRE COMPLETION OF A CASA PACIFICA POSTDOCTORAL APPLICATION. Casa Pacifica is located outside of Los Angeles in the community of Camarillo, a few miles from the Pacific Ocean and one hour south of Santa Barbara. It is a beautiful setting adjacent to California's newest University at Channel Islands.

Additional Information About Training Opportunities**Program Description**

Program provides advanced training opportunities in the core service areas provided by CAPS including: Intake Assessment, Crisis Intervention, Brief Psychotherapy, Multicultural Counseling, Consultation to Campus Units and Departments, Program Development and Outreach. The program stresses Generalist Training, with the goal of preparing the fellow for a staff position in a university counseling center. At the same time, this program offers specialized training in several emphasis areas: Eating Disorders, Sport Psychology, Multicultural Immersion, Mind-Body Wellness and a Clinical Practice area, depending upon resident interests and experience level, as well as the current needs of the Center. The educational philosophy and training model is to provide training grounded in the scientific principles of our profession that emphasize the area of applied practice. The overarching objective is to train ethical, competent psychologists who are capable of functioning independently and will contribute both to the welfare of society and to the profession. The training staff realizes that the most important learning occurs through providing service under the direct supervision and mentorship of a senior staff professional. Such "learning by doing" is guided, enriched and deepened through the postdoctoral seminar and clinical rotations, consultations, and in-service staff development activities. The residency program is defined by a commitment to the following goals: Goal #1: Commitment to mentoring and the practitioner-scholar model. Goal #2: Commitment to a broad range of skill development. Goal #3: Commitment to training in providing services to a diverse clientele. Goal #4: Commitment to facilitating personal growth and professional identity. Goal #5: Commitment to flexibility in developing each resident's training program. See our website for a full description of our program—<http://caps.ucdavis.edu/training>

Program Description

The South East Bay Consortium is a joint program supported by the Fremont and Union City/Hayward Medical Centers. The South East Bay Consortium is an APA-accredited and APPIC-member psychology postdoctoral residency program* that is well-integrated into the Kaiser Permanente health care system. Residents placed in the Departments of Fremont Psychiatry, Union City/Hayward Psychiatry and/or Union city/Hayward Chemical Dependency. Residents are required to complete 40 hours per week over a 12-month period.

The South East Bay Consortium postdoctoral residency program (SEBC) is sequential, cumulative, and graduated in complexity. Graduated and sequential aspects of the residency programs are achieved through supervision, evaluation, didactic seminars. One half of the residents' time is spent providing direct services to clientele through individual, group, family, or couple therapy and conducting psychological assessments. In addition to the required two hours of individual supervision weekly by a licensed psychologist, residents also participate in at least two additional hours of individual and/or group supervision, case conferences, team meetings, and weekly seminars. For SEBC's seminar schedule for the current training year, click here. Residents are encouraged to attend the monthly training seminars for the general staff.

In addition to a weekly seminar, and individual and group supervision at their training sites, residents are expected to attend half-day regional seminars. The first regional seminar of the training year focuses on Ethics and the Law. This ensures all postdoctoral residents have a sound working knowledge of California's professional code of conduct. Other topics of regional seminars have included: Neuropsychology, Diversity and Dialectical Behavioral Therapy. These seminars are developed by the Northern California Regional Training Director. Please refer to web site for further description of the program sites: http://residency.kp.org/ncal/mental_health_training/postdoctoral/clinical_psychology/south_east_bay/index.html

Program Description

The Sullivan Center for Children is an intensive outpatient treatment center that specializes in providing psychological services to children, adolescents and their families. The Sullivan Center is a Psychological Corporation currently employing 15 clinicians. Five of those clinicians are Ph.D. or Psy.D. Psychologists. We also have one LMFT's and one Board Certified Child Psychiatrist. The populations we treat vary greatly in terms of age, type of pathology, socio-economic status, and cultural backgrounds. We currently have 8 Post Doctoral Fellows 5 of whom should be licensed before the next Fellowship year. The Center is dedicated to the treatment of children, adolescents and their families. We provide intensive assessments and individualized treatment programs. We have a team approach in which, if appropriate, children and members of their families can be involved in an integrated treatment approach using more than one modality. We provide individual treatment for the children, individual therapy for the parents, if appropriate, educational/supportive therapy for the parents around the child's needs, couples' therapy if the problems lie in the parents and not in the child, family therapy if the pathology is best treated from a family systems perspective, group therapy for children, and supportive and educational groups for parents. If a child and their family are involved with more than one therapist, then a team approach is used to coordinating treatments. Age of people actually treated at the Center run from infancy through older adulthood, although adults treated at the Center usually arrived at our services through a child or adolescent problem. We are a for-profit corporation and provide fee-for-service basis; we also have contracts with the Fresno Unified School District and Central Valley Regional Center that allow us to provide services to children who have a lower socio-economic status. We deal with problems of childhood that range from mildly to severely disturbed disorders. Roughly 50-75% of our clients are referred from our private acute care inpatient psychiatric hospital. Other patients are referred from outpatient providers. Postdocs are an integral part of an interdisciplinary hospital based outpatient program. The combination of clients who have a high baseline level of functioning yet are in the severely acute phase of a mood disorder creates a most opportunistic training environment. The program has high expectations for change in a relatively short period of time, and when clients leave the program feeling confident about resuming their lives, it is most gratifying to consumers and staff alike. I hope you find this program interesting and that you apply. We offer a very competitive benefits package and pay and it is hard to beat the best weather in the USA and the California lifestyle. Sharp Healthcare is also the largest non-military employer in San Diego. Post-postdoc factoid: 5 of our staff/faculty members were former post docs. Are you next?

Program Description
The Fellowship program at University of California, San Diego Counseling and Psychological Services (CAPS) involves supervised experience working as an integral member of a team of clinicians serving almost 30,000 diverse undergraduate and graduate students. Our main focus is to provide an environment that facilitates professional growth and development. The postdoctoral fellowship year focuses on the integration of professional skills in a supervised environment in preparation for licensure and professional work. Responsibilities include provision of short-term counseling/psychotherapy, group therapy, intake and assessment, referrals, crisis/urgent care counseling, outreach and consultation to the campus community, serving as a consultant to one of the six undergraduate colleges or major campus program, delivery of training, and administrative committee work. In addition, the fellow will work with a department on campus to provide ongoing consultation, outreach and collaboration.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
Still a postdoctoral fellow		1	1
Veterans Affairs Medical Center		3	2
State/County/Other Public Hospital	1		

Program Description

The VA Long Beach Healthcare System's Psychology Postdoctoral Fellowship Program is a generalist clinical psychology training program with six Special Emphasis areas: 1) Hepatitis C (HCV)/HIV, 2) Interprofessional (2 positions), 3) Neuropsychology, 4) Psychosocial Rehabilitation and Recovery (PRR) of the Seriously Mentally Ill, 5) Post Traumatic Stress Disorder and 6) Rehabilitation Psychology. The Neuropsychology Special Emphasis area spans two years with an opening every other year (recruitment will occur for the 2014-2015 training year), while the other five Special Emphasis areas are one year positions. Our training model is scientist-practitioner, with the theoretical orientations of the postdoctoral staff including a range from Cognitive Behavioral, Acceptance and Commitment Therapies to psychodynamic approaches. The program was started in August 2008 and we are currently training our 5th cohort of fellows. The program underwent a site visit by the Commission on Accreditation in May 2012 and received accreditation in November 2012. The next site visit will be in 2019. The faculty of the Neuropsychology Special Emphasis area are in process of submitting a separate self-study for accreditation in Clinical Neuropsychology. Candidates with strong generalist training skills that are interested in working in a large medical setting with a veteran population are encouraged to apply. The ultimate goal of the program is to have fellows further hone generalist skills while acquiring training in a Special Emphasis area that matches their interests. We also encourage fellows to apply for and obtain state licensure during their programming in order to become independent practitioners across a variety of settings. VA Long Beach Healthcare System has a longstanding commitment to clinical training with an internship program that has been accredited for over 30 years and a more informal practicum program that has attracted outstanding clinical trainees from local programs. Although formally and legally interns and practicum students need to be supervised by licensed faculty, opportunities exist for supervision along with clinical and didactic training experiences for fellows. The Psychology Postdoctoral Fellowship Program follows a policy of selecting the most qualified candidates and is an Equal Opportunity Employer. Our commitment to diversity includes attempting to ensure an appropriate representation of individual along many dimensions, including (but not limited to) gender, sexual orientation, age, ethnic/racial minorities, and persons with disabilities. Please email Dr. Linda Mona, Psychology Postdoctoral Training Director at Linda.Mona@va.gov with any questions.

University Teaching Faculty	1		

Program Description

The USC Institute of Psychiatry, Law, and Behavioral Science is an integrated part of the USC Department of Psychiatry and in existence since 1963. It offers a full-time 1-year Fellowship and an option for a 2nd-year. Psychology Fellows are offered the same training and education as Psychiatry Fellows. All Fellows serve under supervision as consultants and as expert witnesses for the State & Federal Criminal Court, Dependency & Family Court, Mental Health Court, Juvenile Court, and County Probation as well as the State Parole Board. Each Fellow is given approximately 2 cases per week involving psychological-legal issues for courts and various administrative hearings. The Fellows have at least 7 USC Fellowship-trained faculty supervisors. The Fellows conduct treatment of mentally disordered offenders. Courses specifically designed for Fellows include: criminal, civil, juvenile, family, and mental health law; videotape seminar; landmark mental health law cases seminar; legal research; correctional psychology; and legal and ethical issues for the practice of forensic psychology. Courses and seminars are approximately 14-18 hours per week. Lecturers are forensic psychologists and psychiatrists, judges, attorneys and professionals in other forensic related disciplines. Each Fellow teaches and supervises USC psychiatric residents in the area of psychiatry and the law. There are clinical case conferences where each Fellow presents a forensic case demonstrating his/her knowledge and application of clinical material to legal issues. Each fellow will serve as a consultant to the largest jail in the United States. Finally, each fellow will have an opportunity to conduct a psychological autopsy for the Los Angeles County Department of Coroner. Use the telephone number or web address listed above for inquiries and application. We adhere to APPIC's Uniform Notification Date (UNDr) and the UNDr procedures outlined on the APPIC website.

Program Description

The Postdoctoral Fellowship Program in Neuropsychology at the UCLA Semel Institute for Neuroscience and Human Behavior aims to prepare clinician-scientists for careers in academic research and clinical applications within the specialty area of neuropsychology. The program offers training in a series of six tracks with clinician/educator and academic/research emphases, including: 1) General Track - 1 opening; 2) Child Track - 1 opening; 3) HIV/AIDS Research Track - 1-2 openings. All Fellows, regardless of track, receive broad training and experience in both research and practice. All residents share an extensive curriculum of didactic and experiential offerings, and training programs are individually tailored to achieve specific goals considering the resident's prior competencies and experiences. Patient populations span all age groups, and both clinical applications and research projects target a diversity of neurologic, psychiatric, and general medical disorders, with integration across diverse departments and centers including: Psychiatry and Biobehavioral Sciences, Neurology, Neurosurgery, the Brain Injury Research Center, and Ahmanson-Lovelace Brain Mapping Center at UCLA. Additional offerings are made possible through strong collaborations with centers of excellence off-campus, including The Help Group (with a focus on neurodevelopmental disabilities), the Veterans Administration Greater Los Angeles Health Care System (VAGLAS, with a focus on HIV/AIDS and major mental illness), and The University Neuropsychology Group in Pasadena.

Additional Information About Training Opportunities**Program Description**

LMU is a private Catholic undergraduate and graduate institution located on the bluffs above Marina del Rey in California. Student Psychological Services (SPS) is a department in the Division of Student Affairs. The Division of Student Affairs supports the University mission through programs and services designed to advance student learning. In keeping with the mission, SPS aims "to foster students" personal, social, and intellectual development and emotional health by providing psychological services to students and by serving as an educational and consultative resource to the University community. Services are provided in a safe environment that is respectful of cultural and individual differences. LMU is a highly ranked regional university, and the student body of approximately 5,500 undergraduates and 2,500 graduate students is highly diverse. SPS is centrally located in relatively new offices. In addition to providing direct services, Fellows participate in designing consultation and outreach programs, campus events, and conduct program evaluation. Supervision meets licensure requirements, and Fellows have the opportunity to work with all staff members. Fellowship meets 1500 required hours with up to a 44 hours week.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
University Counseling Center	1		1
University Teaching Faculty		1	

Program Description

The University of Southern California, Division of Student Affairs, offers a postdoctoral fellowship in College Student Disability Services. The central training goal for this fellowship is that the postdoctoral fellow complete training with advanced knowledge, confidence, and competence in the following areas of clinical practice: short-term counseling, group counseling, awareness and appreciation of human diversity, professional ethics and decision making, outreach/consultation, and clinical supervision. This fellowship is a 12-month position with an emphasis in clinical assessment, including psychoeducational assessments of learning disabilities and ADHD. The fellow will provide clinical services to students with disabilities who register with the Disability Services and Programs office as well as the general student population seeking support and learning assistance.

Program Description

Our training program seeks to ensure the development of advanced clinical competence in the general practice of professional psychology integrated with specialized, in-depth, training in a specific area of emphasis. Our program supplements clinical training with regular didactics and clinical research experience within a specific area of emphasis, to further develop depth in addition to breadth of exposure. All four of our Fellowship emphasis areas enjoy strong connections with local academic institutions (especially University of California, Los Angeles) and/or on-site VA researchers, allowing for additional educational and research collaborations. Our program emphasizes the application of current scientific knowledge to professional service delivery, including strong training in evidence-based practices. At the completion of training, Fellows are expected to be prepared to obtain licensure and, if relevant, be prepared for the board certification process in their area of emphasis. Ultimately, we strive to support the VA's training mission of producing competent, creative psychologists who will go on to either VA jobs or will work in academia, other medical centers, the private sector, etc.

Additional Information About Training Opportunities

Program Description

The University of Southern California University Center for Excellence in Developmental Disabilities (USC UCEDD) at Children's Hospital Los Angeles (CHLA) offers an advanced two-year postdoctoral training program in Clinical Child Psychology. The program offers unique training experiences in clearly defined emphasis areas. Individuals are recruited specifically for each emphasis area and are offered training opportunities in a variety of departments and clinical services. The emphasis practice areas include Pediatric Psychology, Early Childhood Mental Health, Trauma Psychology, Child and Family Therapy, and Adolescent Psychology. The postdoctoral training program at CHLA is based on an integrated community mental health and health psychology scientist - practitioner model. It is designed to train psychologists to assume leadership roles as experts in clinical psychology in pediatric community and medical settings. Depending

Additional Information About Training Opportunities**Program Description**

This Postdoctoral Fellowship is for psychologists who are looking to train in diagnostic and psychotherapeutic work with children, adolescents and their parents/caregivers from a psychodynamic perspective. The Center is located in the heart of West Los Angeles on the beautiful 17 acre campus of the parent agency, Vista Del Mar. The Reiss-Davis Clinic has been serving the mental health needs of a racially, ethnically, and socio-economically diverse population since 1950. The fellowship functions within the overall structure of the clinic. Modeled after the Hampstead Clinic in London, the fellowship program has been offering advanced training in psychoanalytic child-adolescent work for sixty years. The program's curriculum incorporates the latest in developmental interpersonal neurobiology. Fellowships are available on a part-time basis (25-28 hours/week), and begin in September. A typical week for part-time fellows is comprised of 12 hours of diagnostic and therapy cases and 2-3 hours of individual supervision. All fellows receive 10-15 hours of weekly group supervision and didactic teaching from psychodynamically-trained faculty who are practicing clinicians. The program is small and collegial, allowing ample interaction time with the teaching faculty. The two-years provide a unique opportunity to gain experience in longer-term intensive psychotherapy. The goal of the Reiss-Davis Fellowship is to graduate mental health professionals who have solid observational, diagnostic, and therapeutic skills, are knowledgeable about psychoanalytic theory and technique, are grounded in their familiarity with normal and pathological development and parenting issues and ultimately feel confident in their ability to integrate theory with practice.

Community Mental Health Center	4	5	3

Program Description

WCC is a private, non-profit community psychology clinic that provides comprehensive psychological services to children, youth, their families and caregivers. Our clients represent a variety of racial, ethnic, cultural and socioeconomic groups. Many of our clients come from disrupted families. Many are involved with the foster care system. The primary theoretical orientations of the program are psychodynamic and systems informed by current research and literature. Residents provide services in the Outpatient Therapy Program and/or the Assessment Program. Residents work in the community (i.e. homes and schools) as well as in the clinic. Because they must travel in the community at times, personal transportation is required. Assessment training is based in the therapeutic-collaborative model. For applicants to assessment, Rorschach training (Exner or R-PAS) is required by start of internship; experience is preferred.

All applicants must have received a degree from an APA accredited program and completed an APA, APPIC or CAPIC internship. All doctoral requirements must be completed prior to the start of Residency. Residents contract for a 12-month, 40 hour/week commitment. The postdoctoral program exceeds the 1500 hour post degree supervised professional experience requirement of the California Board of Psychology. Selection criteria includes solid background in developmental theory, trauma and attachment theory/research; prior clinical experience with children, youth, and families/caregivers; successful completion of a predoctoral internship program of at least 1500 hours; commitment to increasing awareness of cultural and individual diversity; match with the mission of the agency, excellent professional writing skills, and strong letters of recommendation. Fluency in Spanish is a plus. Applicants are expected to have a high level of general training at the predoctoral level with some training in the area of their desired emphasis areas. Racial and ethnic minorities are encouraged to apply. Download brochure from website <http://www.westcoastcc.org/2210.html>. The brochure for the 2014-2015 training year is expected to be uploaded by November 1, 2013. We have 2 start dates. Five to six residents start 9/2/14 and four to five residents start 1/2/14.

Program Description

The Central Bay region encompasses the cultural and geographic heart of the San Francisco Bay Area. The training sites of the Central Bay Consortium (CBC) are located in the cities of Oakland and Richmond. The Departments of Psychiatry at each site provide psychotherapy, psychological testing, and psycho-educational programs. Each department includes Adult Services, Child & Family Services, and an Intensive Outpatient Program (IOP) that provides services to recently hospitalized individuals. Training sites in the CBC also include the Chemical Dependency Recovery Program (CDRP), which offers intensive chemical dependency services. Each site delivers individual and group therapy, including Dialectic Behavioral Therapy (DBT). Residents at the CBC are placed in Departments of Psychiatry and are required to complete 40 hours per week over a 12-month period. In addition to the required two hours of individual supervision provided weekly by a psychologist, residents also participate in two or more hours of additional training, including group supervision, case conference and/or team meetings, and weekly seminars. Depending on the program and site, other seminars may be required or recommended to residents. Residents also attend periodic half-day Kaiser Permanente Northern California Post-doctoral regional seminars. These seminars provide an opportunity for residents to develop professional relationships within a large community of psychologists that will help orient the residents to their careers as professional psychologists. We at Kaiser Permanente's CBC have made a commitment to utilizing evidence-based treatments. Residents must have an unrestricted right to work in the US.

Additional Information About Training Opportunities**Program Description**

The focus of the Postdoctoral Fellowship training program at Children's Hospital of Orange County (CHOC) is to provide advanced in-depth training in child/pediatric psychology and prepare individuals for careers in medical settings. The CHOC Fellowship offers specialized training in child clinical psychology applied in a general pediatric tertiary care setting. Postdoctoral Fellows are supervised by Psychology faculty who have expertise in pediatric and child clinical psychology, as well as specialized interests in neuropsychology, pain management, disruptive behavior disorders, infant development, and sports psychology. The Program provides experience with consultation/liaison to sub-specialty pediatric units, neuropsychological assessment, and work in our outpatient Pediatric Psychology Clinic. One position is with our Consultation and Liaison Program and one with the Oncology Service. A third position is anticipated with the Epilepsy program. The training program is housed within the Department of Pediatric Psychology which provides comprehensive psychological services throughout the Children's Hospital. Postdoctoral Fellows share some training experiences and seminars with interns in an APA accredited psychology internship as well sharing some educational opportunities with medical residents. Further, fellows have the opportunity to evaluate/consult/treat a wide variety of families from multicultural backgrounds. Fellows participate in research activities and complete a clinical/research project during their fellowship. Fellows also have the opportunity to provide supervision to practicum students and interns.

Program Description

Please see the Training Program website at www.paloalto.va.gov/services/mental/PsychologyTraining.asp for program brochure and application instructions. Application due date is January 2, 2014. All application materials must be sent by email to the Postdoctoral Coordinator at William.Faustman@va.gov. All offers will be made by February 19, 2014. Contact Dr. William Faustman with specific questions. Applicants must be U.S. citizens and graduates of APA-accredited internships and APA-accredited doctoral programs in Clinical or Counseling Psychology. Dissertation must be completed to begin postdoctoral program. Postdoctoral training at the VA Palo Alto builds on the generalized foundation of the knowledge, skills, and proficiencies that define clinical psychology, and offers both breadth and depth to develop both advanced general clinical skills and specific skills within the following 8 areas of emphasis: Behavioral Medicine, Clinical Geropsychology, Palliative Care, Clinical Neuropsychology (not recruiting for 2014-15), Rehabilitation Psychology, Psychosocial Rehabilitation, PTSD, Substance Use/Homeless Rehabilitation, and Couples/Family Systems (1 position in each area for 2014-15 except Clinical Neuropsychology; 2 positions in PTSD). The core program also emphasizes professional development and the development of skills for supervision. Extensive individual and group supervision are available in all settings. *Each emphasis area provides training in established or emerging competencies for psychologists working in these areas. The Clinical Neuropsychology emphasis area provides training in all areas of Neuropsychology competency as described by APA Division 40. The Rehabilitation Psychology emphasis area provides training in all areas of Rehabilitation competency as described by APA Division 22.

Program Description

The Sierra Pacific Mental Illness, Research, Education and Clinical Center (MIRECC) of the VA Palo Alto Health Care System is accepting applications for our 2-year postdoctoral fellowship in Advanced Psychology. The fellowship offers intensive training in clinical research, (including direct service activities with clients), education and professional development activities (75% time); 25% is dedicated exclusively to placement in direct service settings where clinical skills are honed and refined. Our fellowship is organized around two primary areas of emphasis: 1) traumatic stress disorders / PTSD, and 2) aging / dementia. Fellows are offered strong mentoring to help them develop advanced expertise in clinical research methodologies and content areas most pertinent to the mental health needs of today's veterans. We are an equal opportunity training site and encourage and welcome applications from all qualified applicants.

Program Description

Patton State Hospital is the largest state hospital in California serving a census of approximately 1500 patients with a wide variety of diagnoses, legal commitments, and clinical conditions. We have provided psychology training at various levels for more than four decades and our Psychology Department currently trains four fellows, four interns, and 10 practicum students annually. Our fellowship has two tracks, which are described in the sections below:

Neuropsychology Fellowship (Application Deadline 12/13/13)

Our neuropsychology fellowship is a two-year program designed to prepare fellows for independent practice as clinical neuropsychologists. Our fellowship is designed to satisfy the fellowship requirement for application for board certification in clinical neuropsychology through ABPP. Although we have a strong emphasis on providing neuropsychological services to individuals with severe mental illness, our neuropsychology fellows gain regular exposure to a wide variety of neuropsychological conditions including cortical and subcortical dementias, history of traumatic brain injury, substance abuse histories, cerebrovascular accidents, and various medical conditions impacting cognition. Fellows conduct a wide variety of neuropsychological assessments using a hypothesis testing flexible battery approach and also conduct a limited number of fixed batteries as part of our neuropsychological rehabilitation programs. Fellows are involved in neuropsychological rehabilitation on an ongoing basis as part of their training. Fellows are actively involved in research throughout the program and each fellow is required to submit an independent research project for publication in the second year of fellowship. During the second year, fellows spend one day per week at the Loma Linda University Medical Center conducting neuropsychological assessments in an outpatient rehabilitation setting. Ongoing seminars include Advanced Neuropsychology Seminar, Neuropsychology Research and Theory Seminar, and Professional Development Seminar.

Forensic Fellowship (Application Deadline 1/15/14)

Our forensic fellowship is a one-year program designed to meet the postdoctoral educational requirements for application for board certification in forensic psychology through ABPP. Forensic fellows conduct a wide variety of forensic assessments including competency to stand trial, mental state at the time of offense, general violence risk assessments, assessment of risk for sexual violence, and evaluations of risk under California's Mentally Disorder Offender laws. Although most assessments will be conducted in our state hospital setting, our fellowship also has a contract with the San Bernardino County Office of the Public Defender, which provides fellows with experiences conducting pretrial evaluations (mental state at the time of offense and competency to stand trial) of defendants housed in a county jail setting. These evaluations provide experience and exposure to forensic consultation roles with attorneys. Most fellows provide court testimony in the California Superior Courts at some point during the fellowship. We also conduct a mock court training exercise at the end of the year for all forensic fellows. Fellows are actively involved in forensic research and are expected to complete an independent research project to submit for publication during their fellowship.; Fellows also provide forensically oriented individual and/or group treatment. Common treatment groups focus on forensically-related issues including competence to stand trial, violence risk reduction, sex offender treatment, anger management, and substance abuse treatment. Ongoing yearlong seminars include Landmark Mental Health Case Law, Advanced Forensic Seminar, Professional Development Seminar, and Research and Theory Seminar.

Additional Information About Training Opportunities**Program Description**

The East Bay Consortium consists of at least three fellowships at each of three site locations in the Bay Area: Antioch, Pleasanton, and Walnut Creek. Residents are generalists, but may have a primary affiliation to the Adult, Child & Family, or Chemical Dependency teams depending on the site. Separate applications must be made to each site of interest. Our training philosophy is to foster clinical competence and professional identity through the mastery of basic and specialized skills. Training in empirically validated techniques gives residents a menu of interventions, while supervision keeps a focus on the particulars of each therapist/client pairing. There is a clear emphasis on the role of the psychologist in a multi-cultural community, an outpatient setting and integrated with the medical center in providing quality health care to its members. The residency consists of three components: 1. Regular exposure, through active participation, to all facets of outpatient services. 2. Professional guidance through sessions of formal supervision, staff meetings and informal contacts with staff members. 3. Regular weekly and monthly training seminars. One half of the residents time is spent providing direct services to Kaiser members through individual, group, & family therapy. Residents complete 4 psychological test batteries over the course of the training year and complete a program evaluation project. SERVICES: The Departments of Psychiatry at each site provide individual, group, family, child and adolescent therapy, post-hospital stabilization programs for teens and adults, and chemical dependency services for adults, as well as evidence based treatment groups for common disorders. Some specialized services are sub regionalized. STAFF ORIENTATION: Members of the staff represent a variety of theoretical orientations.

Additional Information About Training Opportunities

Program Description

The Central Valley Consortium is well-integrated into the Kaiser Permanente health care system. A total of 5 Clinical Psychology Residents are placed in two main locations: South Sacramento/Elk Grove, with 1 Child and 2 Adult residents, and Roseville, with 2 residents in the Mental health Department. 40hrs a week is required over the 12-month residency period. Half of the resident's time is spent providing direct services to clients through individual, group, and family therapy and conducting psychological assessments. In addition to the required two hours of individual supervision weekly by a licensed psychologist, residents also participate in two hours of group supervision, case conferences, research projects, team meetings, and weekly seminars. Staff psychologists possess a wide range of specialties including Pain Management, Eating Disorders, Cultural Issues, Women's Health, Biofeedback, Health Psychology, Mood Disorders, ADHD, Family Systems, and Autism. The patient population consists of Kaiser Health Plan members possessing prepaid psychiatric benefits and also Medi-Cal clientele (South Sacramento). Our members consist of a wide spectrum of lower to middle/working class adults, families, couples, and children. The patient population is ethnically diverse and exhibits a wide array of psychological, medical and chemical dependency problems. The Central Sacramento Valley Region encompasses the cultural and geographic heart of Northern California with the richly diverse urban area of the Sacramento metropolitan area. It was named the most ethnically and culturally diverse city in the United States by Time Magazine in 2002. The Pacific Ocean, the famous Napa/Sonoma wine country, and San Francisco are all a short 2 hour drive away. The Sierra Nevada Mountains and Lake Tahoe only 90 minutes and Yosemite National Park and Monterey are 3 hours away.

Program Description

UNIVERSITY OF CALIFORNIA, DAVIS, HEALTH SYSTEM: POSTDOCTORAL FELLOWSHIPS IN CLINICAL CHILD PSYCHOLOGY
The Department of Psychiatry and Behavioral Sciences announces two child positions for the 2014-2015 academic year, starting September 15, 2014. Our program provides advanced clinical training opportunities in individual, family and group therapy; psychological assessment; and consultation. All services are provided through a Sacramento County Behavioral Health affiliated outpatient clinic. The stipend for all positions will be \$42,000 plus competitive university benefits. The application deadline is January 10, 2014. Interviews will be held on Monday, February 3, 2014 and Friday, February 7, 2014. We will start our notification process on Wednesday, February 19, 2014. For more information, please visit: www.ucdmc.ucdavis.edu/psychiatry/psychology and <http://appic.org/directory/program/cache/1072.html>.

Additional Information About Training Opportunities

Program Description

The West Bay Consortium is well-integrated into the Kaiser Permanente health care system. The central San Francisco Bay region encompasses the cultural and geographic heart of the Bay Area. The training sites of the West Bay Consortium are located in the cities of Redwood City, San Francisco, and South San Francisco. The Departments of Psychiatry at each site provides psychotherapy, psychological testing, and psycho-educational programs. Each department includes an Intensive Outpatient Program (IOP) that provides services to recently hospitalized individuals, or individuals at risk for psychiatric hospitalization. Certain sites in the West Bay Consortium include Chemical Dependency Programs which offer intensive chemical dependency services. One site provides services for those patients with chronic pain/behavioral health concerns. Certain departments offer Neuropsychological assessment services. Each site runs many different groups such as Depression, Anxiety, and Dialectic Behavioral Therapy (DBT). All residents are required to complete 40 hours per week over a 12-month period. In addition to the required two hours of individual supervision weekly by a psychologist, the resident also participates in two or more hours of group supervision, case conference, and/or team meetings and a two-hour weekly seminar. Residents are also encouraged to attend departmental grand rounds and seminars. Residents at some sites will also have the opportunity to teach and gain experience conducting supervision. Residents from each of the sites will attend weekly seminars in San Bruno. Residents also attend regular half-day Kaiser Permanente Northern California Post-Doctoral regional seminars. A core feature of our training program is supporting and mentoring new professionals in their transition from internship through licensure. All applicants must be authorized to work in the U.S. without the need of an employer-sponsored or student visa.

Additional Information About Training Opportunities
Program Description

The VASDHS/UCSD Clinical Psychology Postdoctoral Residency Program is accredited by the American Psychological Association as a postdoctoral residency program in clinical psychology. In close affiliation with the University of California, San Diego, Department of Psychiatry, the program offers 1-year positions in two tracks: Evidence Based Psychotherapy (EBP) and Psychosocial Rehabilitation (PSR). In the EBP Track, five positions are available, one in each of the following emphasis areas: Anxiety and Trauma, Geropsychology and Home-Based Care, Mood Disorders and Suicidality, OEF/OIF/OND PTSD, and Family Mental Health. Residents complete a major rotation in the emphasis area and a minor rotation in primary care mental health integration. Residents learn to deliver evidence-based psychotherapies in a recovery model context, including developing personalized functioning goals and participating actively in treatment by choosing from a menu of treatment program and community service opportunities. Residents also will be prepared to help other mental health professionals to appreciate the value of evidence-based care and to train their colleagues to deliver such care. In the PSR Track, two clinical psychology positions are available. Residents provide PSR services to veterans with psychotic disorders on primary and minor rotations in acute care (inpatient), outpatient and community-based programs. Using a Recovery Model, our programs empower veterans to develop personalized functioning goals and choose from a menu of treatment program opportunities, including medication management, vocational skills development/supportive employment, social skills training, cognitive behavioral therapy for psychosis, illness management and recovery, substance use/dual-diagnosis treatment, neuropsychological evaluation, and access to vital community resources that support personal goal attainment through assertive community treatment and case management.

Additional Information About Training Opportunities

Program Description

The Sharp Mesa Vista Hospital Post-doctoral Fellowship offers training in a fast paced intensive treatment outpatient program. The Fellow will specialize in an integrative mode of Cognitive Behavioral Therapy (CBT) as well as be trained in Dialectical Behavioral Therapy (DBT). Our model of training is based on the Practitioner/Mentor Model as our primary mode of treatment is group therapy. The postdoc will facilitate group treatment as a co-therapist with a supervisor, psychologist & will also cross-train with other licensed professionals. Fellows will function as a therapist and case manager within the outpatient department of Sharp Mesa Vista Hospital. The Fellow will spend the majority of the training year with the Cognitive Intensive Outpatient Program (Cog-IOP) and other training with the Dialectical Behavioral Therapy-IOP Skills Training Program. Our clients are primarily high functioning adults diagnosed with acute mood and personality

Program Description

***NOTE: ALL POSTDOCTORAL POSITIONS ARE FILLED BY UCSF PREDOCTORAL INTERNS ADVANCING TO THE SECOND YEAR OF OUR TWO-YEAR TRAINING PROGRAM. Postdoctoral training in clinical psychology is centered in one of the following cluster areas: clinical assessment and interventions, and public service and minority. The training has two major components: (1) collaborative and clinical research with a faculty member in the fellow's cluster, and (2) advanced clinical training in that cluster and/or in other clusters.

Additional Information About Training Opportunities

Program Description

SFVAMC offers APA accredited clinical psychology post-doctoral fellowships with emphasis areas in PTSD/SUD, PTSD-Returning Veterans, Substance Use Disorders; Rural Psychology; Women's Mental Health and Trauma; Women's Mental Health and Primary Care: Evidence-Based Psychotherapy; Psychosocial Rehabilitation; Primary Care Psychology; HIV/HCV Psychology and Geropsychology. The Clinical Neuropsychology postdoctoral residency is currently under review awaiting final decision for APA accreditation. Our training program is affiliated with University of California, San Francisco. Fellows receive supervised professional experience in psychological assessment, treatment and consultation, multidisciplinary treatment planning and clinical supervision. Fellows are provided ample opportunity to build team leadership skills, participate in program development and take part in research opportunities. Up to 300 hours at a UCSF off-site programming may be possible. Please see our online brochure for more information. Candidates must have completed an APA-approved internship and an APA-approved doctoral program prior to start of fellowship. Candidates must be US Citizens and must have registered for Selective Service if applicable. Varicella immunization and TB testing required. Please submit applications by January 1, 2013. Notification is likely 03/13/2013. SFVAMC is an Affirmative Action/Equal Opportunity Employer.

Program Description

The South Bay Consortium is a joint program supported by the Santa Clara and San Jose Medical Centers. The Consortium began in 2006 as part of a restructuring of the larger Northern California Regional postdoctoral training programs. The goal was to provide an integrated and comprehensive training program while retaining local support. The South Bay Consortium is a comprehensive program that is well integrated into the Kaiser Permanente health care system. A total of 12 Clinical Psychology Residents are placed in Departments of Child or Adult Psychiatry or our Autistic Spectrum Disorder Clinic. Their required clinic time is 40 hours per week during a 12-month period. One-half of the residents' time is spent providing direct services to clientele through individual, group, family, or couples therapy and conducting psychological assessments. In addition to the required two hours of individual supervision weekly by a licensed psychologist, residents also participate in two hours of group supervision, case conferences, team meetings, and weekly seminars. Residents are also encouraged to attend the monthly grand rounds for the general staff. In addition to weekly seminars and individual and group supervision, residents are expected to attend a monthly half-day seminar, which is also open to supervising psychologists for continuing education credits. The first seminar focuses on Ethics and the Law. This ensures all postdoctoral residents have a sound working knowledge of California's professional code of conduct. Please refer to web site for further description of the program sites: http://residency.kp.org/ncal/mental_health_training/postdoctoral/clinical_psychology/south_bay/

	2008-2009	2009-2010	2010-2011
Community Mental Health Center	1	1	

Program Description

The Help Group's post-doctoral Fellowship focusing on Autism Spectrum Disorders provides fellows an opportunity to obtain advanced clinical training and experience in intervention (individual, family, and group therapy) and assessment of children with autism spectrum disorders. In addition, fellows will develop skills in supervision of practicum students and/or interns, public speaking, community outreach, program development and evaluation, and management in areas related to working specifically with an ASD population. The Help Group is one of the largest providers of school-based and outpatient services for children on the autism spectrum in the U.S., assessing and treating children and adolescents from pre-school through young adulthood. The year begins with the fellow completing a self-assessment of their strengths and areas in need of further training and experience. This self-assessment aids in the development of the individualized learning plan, which informs the training agreement for the year. The Help Group's year long post-doctoral fellowship program helps fellows develop specific skills and competencies to increase readiness for independent practice in the field of professional psychology with specialized skills and knowledge in working with children and adolescents with autism spectrum disorders in a community mental health center. The fellow's post-doctoral year will provide extensive experiences and exposure to the multifaceted roles psychologists take on in community mental health, with a focus on autism. The post-doctoral fellow will be given more autonomy and independence as the year proceeds, while always having access to supervisors and training opportunities.

University Teaching Faculty	1		2

Program Description

The Department of Psychiatry and Behavioral Sciences at Stanford University School of Medicine offers clinical and research fellowships in both Adult and Child Psychology.

Clinical Fellowships: Clinical fellowships are available in the APA-accredited Adult and Child Psychology Postdoctoral Program. Clinical fellows spend 50% time in direct clinical activity, with the balance in supervision, case conferences, and seminars. Extensive individual and group supervision is available. Training is designed to promote professional development and prepare fellows for independent practice as psychologists. Clinical fellowship appointments are full-time for 1 year. For detailed application and program information for clinical fellowships, please see: <http://psychiatry.stanford.edu/education/post-doc-fellow/>

Clinical Psychology Fellowship Program Goals and Competencies: The primary goal of the clinical psychology fellowship program is to provide advanced training in the areas of clinical service, scholarly inquiry, professionalism and ethical decision-making. The program design is based on six core competencies, including:

- 1) Theories and Methods of Diagnosis and Assessment
- 2) Theories and Methods of Effective Psychotherapeutic Intervention
- 3) Individual and Cultural Diversity
- 4) Professional Conduct and Interpersonal Relationships
- 5) Ethics and Legal Matters
- 6) Scholarly Inquiry

In the **Adult Program**, fellowships are available in one of three areas: 1) the **Psychosocial Treatment Clinic** anticipates four positions, offering training in evidence-based assessment and treatment of adults with anxiety, mood disorders, eating disorders, interpersonal problems, personality disorders, and couple and family therapy; 2) the **Insomnia And Behavioral Sleep Medicine Program** anticipates one position, offering training in non-pharmacological treatments of sleep disorders; 3) the **Pain Medicine Clinic** anticipates one opening, offering training in the assessment and treatment of pain disorders.

In the **Child Program**, fellowships are available in one of two areas: 1) **Child Psychiatry Clinic** offers training in the evaluation and treatment of children and adolescents with anxiety and mood disorders, autism spectrum disorders, and eating disorders; and 2) the **Pediatric Psychology Program** offers training in the assessment and treatment of children and adolescents with medical illnesses. Both programs utilize evidence-based interventions. Testing is also conducted in both areas of concentration.

Research Fellowships: NIMH-funded research fellowships are for 2-3 years. Research opportunities for NIMH fellows are in depression, anxiety, eating disorders, sleep disorders, and developmental psychopathology. NIMH fellows spend at least 80% of their time in research-related activities with one primary faculty mentor and spend 4-6 hours per week in direct patient care and supervision. NIMH fellowships are also open to MDs. For detailed application and program information, see: <http://psychiatry.stanford.edu/education/T32-research-fellowships/>

Requirements: All applicants must have completed:

- 1) APA- or CPA-accredited graduate programs in clinical, counseling psychology, school psychology, and clinical child psychology programs;
- 2) APA- or CPA-accredited internships; and
- 3) all requirements for their PhD or PsyD prior to beginning their appointment. Appointments are for one year. Positions are contingent upon funding.

Application Information: For detailed application information, please go to <http://psychiatry.stanford.edu/education/post-doc-fellow/>. **Applications due on December 2, 2013.** Minority candidates are strongly encouraged to apply.
Start date: 9/1/14

Additional Information About Training Opportunities

Program Description
Counseling and Psychological Services (CAPS) Postdoctoral Fellowship Program provides opportunities for advanced training and supervision in crisis intervention, assessment, on-call coverage, brief counseling, long-term counseling, individual and couples counseling, group psychotherapy, and consultation. The Postdoctoral Fellowship emphasizes a generalist training in preparation for a Staff Psychologist position at a university counseling center. Over the course of the year, Postdoctoral Fellows continue to enhance and solidify the development of clinical skills required for professional practice in psychology including: skills to effectively respond to crisis situations, consultation and collaboration skills to work with an interdisciplinary staff, the campus community and off-campus community, skills to work with individual and cultural diversity, and consultation, administration, education, liaison, and outreach skills. The training provided meets licensure requirements for the state of Maryland; all supervisors will be licensed in a jurisdiction and able to certify training hours.

Still a postdoctoral fellow			2

Program Description

The Postdoctoral Program in Clinical Psychology at Harbor-UCLA Medical Center is in a UCLA affiliated County Hospital's Psychiatry Department. APPLICANTS ARE RESTRICTED TO GRADUATES OF APA ACCREDITED PROGRAMS IN CLINICAL OR COUNSELING PSYCHOLOGY WHO WILL HAVE COMPLETED AN APA ACCREDITED PRE-DOCTORAL INTERNSHIP BY SEPTEMBER 1, 2014. Fellows are selected to develop expertise in one of the following tracks: 1. Adult Psychology (CBT/DBT and other contextual behavioral treatments); 2. Child/Pediatric Psychology; 3. Behavioral Medicine (HIV Mental Health Services, Women's Health 4. Correctional (Jail Mental Health)/Community Psychosocial Rehabilitation, or 5. Neuropsychology (2 year program APA-accredited, APPCN-member program). Fellows may perform diagnostic assessments ranging from mental status exams to comprehensive psychological batteries. Treatment may include short and long term therapy with individuals, families or groups, and emphasis is placed on evidence-based practice. Participation in program evaluation or clinical research is required. A minimum of 4 hours supervision per week is required, which may include assessment, therapeutic interventions, case management, consultation and research, in addition to case conferences and didactic seminars. Electives outside of the primary expertise focus are available. Courses required for California licensure are generally available during the year.

Additional Information About Training Opportunities

Program Description

PROGRAM OVERVIEW: The North Bay Consortium (NBC) is a comprehensive post doctoral training program that is well integrated into the Kaiser Permanente health care system. NBC residents are placed at one of three medical centers: Santa Rosa, San Rafael, and Vallejo. The program accepts 13 psychology residents: 8 positions are split between adult and child teams in both Santa Rosa and San Rafael, 2 positions are in chemical dependency services in San Rafael and 2 positions are on the adult team and 1 child/adult position in Vallejo. Our training philosophy is to foster clinical competence and professional identity through the mastery of basic and specialized skills. Depending on which site they choose, residents are involved in DBT group programs, teen and child programs, eating disorder programs, behavioral medicine, emergency services, etc. Emphasis is placed on the role of the psychologist in a multi-disciplinary medical center. The residency consists of three components: 1) Regular exposure, through active participation, to all facets of outpatient services; 2) Professional guidance through sessions of formal supervision (2 hours of individual supervision with licensed psychologists and 2 hours of group supervision); and 3) Regularly scheduled local and regional training seminars. One half of the residents' time is spent providing direct services to Kaiser members through individual, group, and family therapy. Over the training year, residents are expected to complete a minimum of two psychological test batteries and at least one program evaluation project. Departments of Psychiatry at each site provide mental health and CD services to Kaiser members in the form of evaluation, psychotherapy, psychoeducational programs, and intensive outpatient treatment. The focus of treatment is on brief therapy using CBT, ACT, DBT, and IPT. Evidenced-based treatments are offered for depression, anxiety, child/adolescent-family problems, eating disorders etc

Additional Information About Training Opportunities
Program Description

Three individual postdoctoral programs are offered. Primary Care Psychology Fellowship: Applications open November 1, 2012. Acceptance Notification March 1, 2013 with July 1, 2013 start. The fellow will function as a member of an integrated care team which includes PCPs, medical residents, medical students, pharmacists, nurses, and care managers. Duties include clinical service delivery, medical student and residency teaching, and participation in research and policy activities related to the nation's first collaborative care research network (www.aafp.org/nrm/ccrn). Fellows will have the unique opportunity to learn the skills necessary for modifying primary care practice and the accommodation of team-based integrated and collaborative care. Fellows will have the opportunity to research the impact of mental health in primary care through current departmental grants and other initiatives. For latest information, contact Dr. Ben Miller at

Program Description

The Colorado Blood Cancer Institute (CBCI) at Presbyterian/St. Luke's Medical Center is a large regional transplant center for Colorado and surrounding states, transplanting over 240 patients per year. Utilizing a multidisciplinary team approach, CBCI provides comprehensive care to transplant patients and their family members. The training program for the postdoctoral fellowship follows a developmental model. Fellows are assumed to have a strong basis of competency in assessment, diagnosis and intervention. In addition, many fellows come with a strong background in health or medical psychology. The transplant program is busy, with a brisk pace, which provides opportunities for fellows to master how to work efficiently within a medical setting as well as how to prioritize their time with the demands of their clinical responsibilities. Fellows carry a clinical case load that is comprised of individual transplant patients and their caregivers (usually family members). Approximately 25 hours per week are spent in direct and indirect patient care. Direct clinical services include conducting patient intakes and providing individual, family or group interventions. Indirect patient care includes providing consultation to staff regarding patient behaviors, treatment planning, and active involvement in 3 weekly multidisciplinary meetings. The rest of the fellow's time is spent in supervision, didactics, administrative activities, or other training activities.

Additional Information About Training Opportunities**Program Description**

The Mission of the VISN 19 MIRECC is to study suicide with the goal of reducing suicidality in the Veteran population, through increased understanding of contributing cognitive and neurobiological underpinnings of suicidal behavior, and the development of evidence-based educational and clinical materials. Fellows within the VISN 19 MIRECC are provided with training in the areas of research, assessment, and intervention, with the ultimate goal of facilitating independent research and practice in the area of suicide prevention. Housed at the Denver Veterans Affairs Medical Center (DVAMC), part of the VA Eastern Colorado Health Care System (<http://www.denver.va.gov/>), the MIRECC offers the opportunity to work with a highly diverse group of Veterans. Supervisory staff are accomplished in the fields of research and suicidology. The Fellowship Program is designed to support individuals in their growth from students to professionals. Towards this aim, Fellows are provided with multiple learning opportunities. For more information please visit: <http://www.mirecc.va.gov/visn19/>

Program Description

Organization Description

Salud Family Health Centers is a Federally Qualified Health Center (FQHC) with nine clinics dedicated to providing primary health services to the residents of a defined catchment area, covering parts of Weld, Boulder, Adams, Larimer, Morgan and Logan Counties, Colorado. The Salud system follows an integrated model of care that aims to ensure high-quality, comprehensive, culturally competent, primary medical, dental, and behavioral health services to traditionally underserved populations, thus reducing barriers to care. Salud promotes prevention and early intervention in an effort to reduce unnecessary medical concerns, utilization, and costs.

Postdoctoral Residency in Psychology

For psychologist candidates with an interest in Integrated Primary Care psychology.

Residency Overview

The residency is a one-year salaried with benefits position in integrated primary care psychology. Residents function as an integral part of the health team, along with other Behavioral Health Providers, including psychologists, social workers, counselors, and graduate-level trainees. Throughout the residency clinical supervision and training supplement the direct clinical experience. Additionally, there are various opportunities for teaching, research, and becoming involved in management and administration as they arise and are consistent with the resident's interest. Satisfactory completion of the residency meets postdoctoral requirements for licensure in Colorado.

Goals and Objectives

Goals:

Prepare residents to function competently and independently in safety-net healthcare settings
 Facilitate the development of psychologists capable of leadership in the healthcare field

Objectives:

Demonstrate competency in the following areas:

Expertise in providing psychological assessment and intervention services to a primary care population
 Advanced understanding and consideration of ethical and legal issues for psychologists in a medical setting
 Effective communication, consultation, coordination, and collaboration with the care team

Ethical, competent supervision of practicum students

Sophistication in understanding of diversity issues in the context of clinical practice and professional development

Advanced professionalism

Understanding of the interaction of psychology and the healthcare system

Scholarly inquiry and integration of science and practice

Activities to help resident meet competencies and objectives:

Act independently as a part of the health team

Provide supervision to practicum student, as available

Receive individual and group supervision

Attend bi-weekly postdoc seminars at Salud (case conference, didactics)

Attend psychopharmacology lectures

Participate in Denver-area postdoctoral seminars

Complete a project (Training, Didactic, Intervention, Program Evaluation)

Location

Residents will be assigned to one of our nine clinics, where they will perform their clinical duties. Clinics vary based on size and demographics of the patient population, number of medical and behavioral health providers, and community characteristics and available community resources; however, the nature of the clinical work and supervision is consistent across clinics.

Direct Service Experiences

Residents spend 30-35 hours per week providing professional psychological services. Primary clinical activities include conducting mental health screenings and diagnostic evaluations, providing consultation services and brief interventions as requested by primary care providers, and providing individual, family, and/or group psychotherapy. In addition, residents conduct psychological assessments as requested by the treating team, including cognitive and personality. Residents provide supervision, under the supervision of a licensed psychologist, to graduate practicum students, as available.

Training Curriculum

In addition to supervised direct patient contact, training opportunities include individual and group supervision, Salud psychology training program seminars, psychopharmacology lectures, participation in Denver-area postdoctoral seminars with residents from other postdoctoral programs in the area, and the development of an independent project. The training opportunities are focused on enhancing the residents' existing skills and honing them to be applicable in the current healthcare system.

Individual Supervision

Residents receive 2 hours per week of individual, in-person supervision from their clinical supervisor, a licensed psychologist in Colorado.

Salud Seminars

The Salud seminars occur biweekly (4 hours each) and encompass journal club, didactics, case conference, group supervision of supervision, guest speakers, and topic presentations by the residents.

Psychopharmacology Lectures

Residents learn from a local psychiatrist about the fundamentals of psychopharmacology during a series of lectures presented throughout the year (approximately once every two months).

Denver-area Postdoctoral Seminars

Twice per month, residents attend seminars held for multiple Denver-area postdoctoral sites.

Project

Each resident is required to complete a project, intended to serve as an opportunity to implement an independent effort, with the support of continued supervision. Projects may include a structured training or didactics tailored to a specific audience; a treatment protocol (e.g., stress management group, pain management group, parenting group); a research project; program evaluation; etc.

Program Description

The Institute of Living offers Postdoctoral residency positions in the following areas of emphasis: (1) Clinical Neuropsychology, (2) Adult Inpatient Psychiatry, (3) Schizophrenia Rehabilitation/Persistent Mental Illness, (4) Anxiety Disorders (available 2014), (5) Child and Adolescent school-based treatment and assessment and outpatient therapy, (6) Health Psychology/Behavioral Medicine (7) Child/Adolescent inpatient psychiatry, (8) Pediatric Consultation/Liaison. Clinical Neuropsychology area provides a 2nd year of training beyond the accredited first year. The first year includes training in assessing patients within an acute psychiatric inpatient setting (Institute of Living), whereas the second year is primarily in a general medical/rehabilitative setting. This area of training complies with APA Division 40, INS, and Houston Conference guidelines. We have residency positions in the following areas: Schizophrenia Rehabilitation Program/persistent mental illness, using cognitive rehabilitation models and functional MRI, and inpatient treatment; Adult Inpatient Psychiatry providing integrative psychodynamically-informed and evidence-based individual, group, and family therapy; two positions in our behavioral/exposure-based Anxiety Disorders Clinic (second year available beyond accredited first year); combined school-based individual and group therapies, assessment of children and adolescents, and outpatient treatment of urban children and adolescents; Health Psychology/Behavioral Medicine position includes inpatient consultation, cognitive assessment and outpatient psychotherapy; Child/adolescent inpatient psychiatry involving advanced training in brief acute individual, group, and family therapies; Pediatric Clinical Psychology providing consultation/liaison services to Connecticut Children's Medical Center. The department is led by senior Psychologists who adhere to a scholar-practitioner model that actively integrates contemporary psychodynamic and cognitive-behavioral models.

Community Mental Health Center		4	2

Program Description

All correspondence should be sent to Kerry Bamrick Program Coordinator: postdoc@chc1.com
Health care is rapidly changing. To continue delivering high-quality care in a way that meets each patient's individual needs, Community Health Center, Inc. (CHC) has adopted a new model of team-based, integrated care in which behavioral health clinicians, primary care providers, dentists and pharmacists all work closely together, sharing the same electronic health record, working under the same roof, and often seated together in the same pod. Designated a Patient Centered Medical Home at the highest level (Level 3) by NCQA in April 2011, CHC is committed to providing effective, efficient, and elegant behavioral health care in the primary care setting. The Postdoctoral Psychology Residency program provides comprehensive training in the provision of psychological care to uninsured and underserved populations under this patient-centered medical home model, with a focus on positive client outcomes and building healthy communities. We believe this is the future of psychology and are looking forward to training the next generation of behavioral health providers in our model.
The postdoctoral resident will have the unique opportunity to:
-Work closely with medical and dental providers as part of CHC's model of integrated care
-Develop clinical and assessment skills with clients of all ages in a variety of settings, including in primary care settings, licensed outpatient mental health clinics, schools and homeless and domestic violence shelters
-Gain experience using electronic health records and other state-of-the-art technologies to manage and deliver care
-Complete psychological assessments to assist primary care providers and members of the behavioral health team in clarifying diagnosis and developing care plans
-Participate in training seminars and supervision covering individual, family and group treatment within primary care.
Training sites are located across the state in Middletown, Meriden, New Britain, New London and Fairfield County.

Program Description

The Child Guidance Center of Southern Connecticut is an independent non-profit agency that has served southwestern Fairfield County since 1954. A staff of over 35 clinicians offers a full array of outpatient mental health services to children, adolescents, and their families. The agency's focus is to thoroughly evaluate each child and family so that treatment services can be matched to specific developmental, dynamic, systemic and behavioral needs. Evaluations at the Center include Developmental Evaluations of pre-schoolers, psychological and neuro-psychological testing, psychiatric and psychopharmacological evaluations, crisis evals, and sexual abuse forensic investigations. Individual, group and family treatment, along with 3 EBT's & psychopharmacological services are available for patients. The Center also provides consultative and psycho-ed services to schools, service providers, childprotective services, and police. The Center provides two hours of individual supervision each week for post-doctoral fellows. A full schedule of weekly seminars and case conferences are provided for all staff and trainees. Fellows also participate in treatment planning meetings. They also attend a weekly psychological testing seminar, as well as other bi-weekly didactic seminars. A parent engagement study group is also part of the training experience. Fellows may also have the opportunity to supervise an intern or extern on testing cases, or coordinate consultation to a local Head Start Program. The Center has 2 facilities in Stamford, CT and community offices in the surrounding towns of Greenwich and Darien. The Clin. Dir. oversees all of the agency's clinical programs. Fellows will spend the majority of their time at the Stamford facilities, but may be asked to see patients in any one of the community offices. Fellows working at those offices will always have immediate access to a clinical supervisor either in person or by phone.

Program Description

Our program subscribes to the guidelines for the specialty of Clinical Health Psychology advanced by the American Psychological Association and espouses a strong scientist-practitioner model. Training emphasizes the following 4 core competencies: (1) research/scholarship; (2) advanced clinical practice; (3) interprofessional training; and, (4) program development/policy guideline implementation. With the assistance of the training committee, residents develop an individualized training plan to meet these 4 core competencies. While residents are invited and encouraged to participate in existing projects (i.e., current research, teaching, clinical, or program development activities), training opportunities in other areas of behavioral medicine of particular interest to a resident are also supported. A brief summary of the 4 core competencies is below: * RESEARCH: Current faculty research interest areas include: adherence, alcohol-tobacco interactions, smoking cessation/nicotine dependence, chronic pain, diabetes, health promotion, obesity, patient-provider interactions, primary care psychology, tinnitus and telemedicine. * CLINICAL PRACTICE: Several clinics are supported by the Clinical Health Psychology Section, including (but not limited to): Primary Care Clinics, the Comprehensive Pain Management Center, the Smoking Cessation/Substance Abuse Clinics, Obesity Management Clinics, and Health Promotion Programs (stress management, healthy lifestyles). * INTERPROFESSIONAL TRAINING: Opportunities to teach, mentor, and supervise other trainees (predoctoral interns, practica students, and undergraduate research assistants) and provide educational activities for other health professionals are provided. * PROGRAM DEVELOPMENT: Most opportunities include the development of innovative, integrative, and multidisciplinary models of care and/or involvement in hospital-, regional- or nation-wide program development projects.

Program Description

Saint Elizabeths Hospital, in Washington, DC, is a publically funded inpatient psychiatric hospital, with approximately 300 beds distributed among 11 forensic and civil units. Our program offers the opportunity to develop your clinical skills while working with a severely mentally ill urban minority population and prepare for your career as a psychologist in the mental health workplace. Our faculty is composed of excellent clinicians who are role models for psychologists in public mental health careers. They have a wide range of clinical experiences and training which they draw upon in educating you in how to work with the severely mentally ill in an inpatient setting. We believe that we offer a challenging and varied educational experience that exposes you to the many different roles that psychologists play in a public mental health hospital and to the different stages of psychopathology as patients undergo treatment.

We offer two tracks in our residency program: General Inpatient and Forensic. The Program's training model is the Practitioner Apprenticeship Model which is characterized by learning by doing and refinement of clinical skills under the guidance and supervision of experienced practitioners. Trainees spend the majority of time (70%) in service delivery. The treatment setting is inpatient psychiatric hospital working with the severely mentally ill population that is either civilly or forensically committed to the hospital. Trainees have input in tailoring programs to meet their needs/interests. Generally trainees spend 16-20 hours per week at a major rotation and 8-12 hours per week at a minor rotation. Training activities include: individual and group psychotherapy, psychological assessment, leading seminars with dental or psychiatric residents, treatment team consultation, treatment planning conferences, and clinical supervision of psychology externs.

The residency is a 12-month, full-time experience beginning on August 1st of each year, totaling to 2000 required hours. Qualified applicants must be a graduate of an APA-accredited doctoral program in clinical or counseling psychology and must have completed an APA-accredited or APPIC member internship and all degree requirements prior to beginning the residency. Training period is 1 year. Applicants must apply to either the forensic or general inpatient tracks. Send request for electronic program brochure to seh.psychtraining@dc.gov for a more detailed explanation of the programs, including specifics regarding major and minor rotation options.

Additional Information About Training Opportunities

Program Description

The Psychology Residency training program at Nova Southeastern University fully supports the mission of Nova Southeastern University by developing Professional Psychologists through multidisciplinary training activities including teaching, research, program evaluation and clinical experience. Our philosophy is that sound clinical practice is based on scientific research and empirical support. Our training model is the Scientist-Practitioner Model of Training where research and scholarly activities guide and direct clinical practice, and clinical practice leads to research questions and activities. Overall, the Residency year is in preparation to function effectively and autonomously as a psychologist. The goals of the Postdoctoral Training Program in Psychology include: 1. To develop advanced clinical skills, including psychological assessments and report writing competency in working with multicultural populations 2. To develop advanced levels of research skills 3. To develop professional supervision skills of interns & graduate/undergrad students 4. To develop advanced levels of teaching skills 5. To develop advanced levels of program evaluation and grant writing skills 6. To develop professional socialization. Objectives The objectives of the Postdoctoral Training Program in Psychology include: 1. Resident will participate in opportunities which will develop and improve research & grant writing skills and participate in seeking grant funding from federal agencies. 2. Resident will provide clinical services, assessments, interventions and report writing to a diverse population with competencies of entry-level & continue to improve and gain new skills as a clinician. 3. Resident will provide instruction to faculty, practitioners & students. Resident will participate in program development & evaluation and prepare for a career in an academic environment. 4. Resident will provide consultation services to relevant constituents.

Program Description

PROG_DescribeWe offer three fellowships in Clinical Psychology, one each in the emphasis areas of substance abuse, geropsychology, or post-traumatic stress disorder. The structure of the program allows for specific training in the above clinical areas as well as additional training experiences of the fellows' choice, including medical psychology, pain psychology, primary care, neuropsychology, women's clinic, mental health clinic, and palliative care (among others). Our web-based brochure describes each of the emphasis area training experiences as well as the additional training experiences described above. The program also includes ongoing supervision experience with our APA accredited internship program's interns. Our Medical Center is a large, comprehensive university-affiliated facility with 46 doctoral level psychologists and multiple treatment milieus and theoretical modalities. Fellows can expect to be collaborative partners in the development of their training plans for the year and will receive a comprehensive training experience while also developing a specialized knowledge and skill base in their respective emphasis area. 12 of our eighteen past fellows have gone on to VA careers in an area related to or consistent with their emphasis area training.

Program Description

Jackson Memorial Hospital (JMH) is an accredited, tax-assisted, tertiary teaching hospital with 1,558 licensed beds. Associated with the Florida International University Herbert Wertheim College of Medicine and the University of Miami Leonard Miller School of Medicine, JMH provides a wide range of patient services and educational programs, a clinical setting for research activities, and a number of health-related community services. It is a regional referral center and a magnet for medical research and innovation. JMH world-renown treatment facilities include the Ryder Trauma Center, UM/JM Burn Center, Holtz Children's Hospital, Jackson Rehabilitation Hospital and the Miami Transplant Institute. Based on the number of admissions to a single facility, Jackson Memorial is one of the nation's busiest hospitals. Jackson Behavioral Health Hospital (JBHH) consolidates evaluation, treatment, teaching and research, offering the highest quality of care for children, adolescents, adults and seniors, including inpatient, partial hospitalization, day treatment and outpatient programs. In association with UM Department of Psychiatry, JBHH offers specialized treatment for numerous conditions including depression and mood disorders, schizophrenia, suicidal ideation or behavior, anxiety and panic disorders, drug and alcohol abuse, Alzheimer's disease, maternal substance abuse and criminal justice mental health services. JBHH provides a supportive, recovery-oriented, safe and nurturing environment, compassionate and well-qualified staff and support groups for patients and their families. Post-doctoral Fellows are integrally involved with staff Psychologists and Psychiatrists in the assessment and treatment of mental health patients at JBHH. Positions are available for the following tracks: Adult Mental Health, Child and Adolescent Mental Health and Behavioral Medicine with concentration in HIV. Admission into the program is highly competitive and candidates are drawn from a nationwide pool of applicants.

Additional Information About Training Opportunities

Program Description

The Mailman Center offers a diverse postdoctoral training experience that may encompass both pediatric and child clinical research and clinical training, as well as developmental neuropsychological training. Postdoctoral positions are offered as they become available through training or other grants. Many postdocs remain in residence for more than a year which, along with funding, leads to fluctuations in the number of positions available. As such, it is best to contact the Training Director before sending in an application. member of the Department of Psychology as well as the medical teams with whom he or she works.

Program Description

The Psychology Service of the Veterans Affairs Healthcare System, Miami VA Medical Center, Miami, Florida has availability of two (2) one-year fellowship positions in Clinical Psychology with emphases in Health Psychology and Gero-Neuropsychology. Choices among clinical experiences include Patient Care Teams, Palliative Care and Hospice; Pain Management; Disease Management (obesity, liver disease, organ transplants, cardiology, diabetes and infectious diseases); Primary Care/Consultation & Liaison; Neuropsychology; and Geriatric Neuropsychology (outpatient and Community Living Center). The Post-Doctoral Residency program is accredited by the American Psychological Association. For information regarding APA accreditation of this residency, or other accredited programs contact the Office of Program Consultation and Accreditation, APA, 750 First Street NE, Washington, DC, 20002-4242, or phone (202) 336-5979, or email apaaccred@apa.org Web: www.apa.org/ed/accreditation The goal of the fellowship program is to prepare scientifically-minded, doctoral-level psychologists to function effectively and autonomously in priority areas of health care for veterans and military patients. Applicants must have completed an APA-accredited Ph.D. or Psy.D. program, including an APA-accredited internship, preferably within a medical setting. Previous clinical and research experience in emphasis area is highly desirable. The program places strong emphasis on clinical activity. Residents are expected to achieve competencies based on the practitioner-scholar model in psychological assessment and diagnosis, psychotherapeutic intervention, professional consultation and supervision, professional issues, administration, ethics and sensitivity to diversity, and scholarly inquiry.

Additional Information About Training Opportunities

Program Description

FIU's Counseling and Psychological Services (CAPS) is housed on two campuses: one on the bay (BBC), the other in southwest Miami (MMC), where the Post-doctoral Fellow will work. FIU is a large, dynamic, urban, multicultural, and multi-ethnic Research 1 University with approximately 42,000 students, 10% of whom are international students. The Fellow has the opportunity to provide individual, group, and couples therapy, as well as crisis intervention services. The Fellow presents Outreach workshops and offers consultation to various university departments including residence life. The Fellow also participates in a specialty track training experience. Specialty tracks currently include Diversity, Clinical Supervision and Training, Psychological Assessment, Mindfulness and Wellness, Administration, and Research. TRAINING FOCUS: Population: Registered FIU students Treatment Modalities: Outpatient/individual, couples, and group therapy, crisis intervention, consultation, workshops, and other outreach programming TREATMENT APPROACH: CAPS offers time-limited, brief psychotherapy. Treatment plans are individualized to reflect the cultural and developmental needs of the students. PHILOSOPHY OF TRAINING: CAPS maintains a strong commitment to training. The Post-doctoral Fellowship is designed to reflect APPIC guidelines. Supervision is based on a developmental approach to learning. Goals are individualized to integrate the Fellow's strengths and interests with CAPS' needs. CAPS emphasizes treatment within the matrix of cultural differences. The full-time professional staff is comprised of psychologists from diverse ethnic and cultural backgrounds who maintain a wide spectrum of theoretical and psychotherapeutic approaches. See our website for application information.

Additional Information About Training Opportunities**Program Description**

Training Setting NeuroBehavioral Institute is a privately-funded center (fee-for-service clinic) that provides evidence-based treatments and specialty services for psychological conditions, including Anxiety Disorders, Obsessive Compulsive Disorder and Related Conditions (Tourette's Syndrome, Trichotillomania, Body Dysmorphic Disorder, Hoarding, Body-focused Repetitive Behavior Disorders), Autistic Spectrum Disorders, and other neurobiologically-based conditions such as Attention Deficit (Hyperactivity) Disorder. Services are provided to children, adolescents and adults from the South Florida area as well as to individuals from other states and countries. Intensive Outpatient Programs are offered for those with severe or complex symptoms as an option to residential treatment programs. A specialized group of clinicians provide psycho-developmental, psycho-educational, and psychological assessment services. The Institute is affiliated with Academic Options, an Educational Consulting practice that provides services (i.e., college counseling, young adult/post-secondary services, therapeutic placement, and school counseling) to students of all ages, abilities, and needs. Research protocols are in place to evaluate new and existing treatments for Obsessive Compulsive Spectrum Conditions as well as their phenomenology. Program Structure This two-year full-time clinical fellowship is a training program in Cognitive and Behavioral Psychology. Postdoctoral Fellows will be license-eligible after the first year of the fellowship program, and strongly encouraged to obtain their license at that point. This two-year clinical fellowship program provides Fellows with the opportunity to continue specialty training in Cognitive Behavioral Psychology for one year following eligibility for licensure, including the experience to develop skills in clinical supervision as a second-year Fellow and the ability to complete comprehensive research projects.

Program Description

The Counseling and Psychiatric Services (CAPS) postdoctoral fellowship program is designed to develop advanced skills in the practice of psychology. Our diverse faculty is able to provide training in multiple approaches in working with clients including: psychodynamic, humanistic, cognitive-behavioral, developmental, and multicultural. Fellows will have the opportunity to work with 14-18 clients in individual therapy per week as well as the opportunity to work with clients in a group. Concentrations within CAPS are available in the areas of eating disorders and alcohol/drug. Additionally, each fellow will work 4-8 hours per week providing brief evaluation and crisis intervention in our walk-in counseling service. Opportunities to provide workshops, educational programming, consultation, and supervision to practicum students are also usually available. Postdoctoral fellows will work in close collaboration with

Additional Information About Training Opportunities**Program Description**

The program provides exemplary training consistent with a scientist-practitioner model. The competency-based training is developmental and contextual in nature, and centered on the fellows' individual needs and goals. While our expertise is in developing professional psychologists for leadership roles that combine service, research, and education, our ultimate commitment is to helping fellows define and progress towards their own chosen career path. We offer training at the following sites: (1) Grady Hospital: (a) child clinical psychology working in a community based program with abused children and the Teen Clinic; (b) adults with serious mental illness working on inpatient units, psychiatric emergency service, intensive outpatient program, psychosocial rehabilitation program, and outpatient community mental health clinic; (c) women's health working with abused and suicidal women and women with breast cancer, (d) psychoanalytic research, (e) health psychology with individuals living with HIV/AIDS, and (f) trauma psychology; (2) Children's Healthcare of Atlanta - (a) pediatric consultation-liaison and neuropsychological assessment with youth with oncological and hematological disorders, (b) pediatric neuropsychology, (c) pediatric feeding disorders, (d) fetal alcohol syndrome, and (e) developmental and behavioral disorders; (3) Department of Rehabilitation Medicine - (a) rehabilitation and neuropsychology. Positions at all sites include a focus on direct clinical service (assessment, intervention, consultation), research/scholarship, the receipt and provision of supervision, and professional development activities. START DATE IS FLEXIBLE FROM JULY THROUGH THIRD MONDAY IN SEPTEMBER.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
University Counseling Center	2	2	1

Program Description

The 2000 hour postdoctoral fellowship at the Georgia State University Counseling and Testing Center balances individual, group and couples therapy with outreach, supervision of practicum students, program development and outreach. This full-time position assumes 25 hours of direct contact per week within a 44 hour week. Nontraditional, as well as traditional diverse students seek services. Postdocs participate in case conference, group psychotherapy seminar, staff meetings and case disposition meetings. The Counseling and Testing Center's orientation and training programs stress cultural competency as a key component of the learning year. Fellows co-lead at least one of 10 interpersonal or support groups, provide emergency coverage after hours for students residing in university housing, conduct walk-in initial consultations with students who present at the CTC, and treat individual clients and couples with a wide range of presenting concerns. Consultation and campus outreach activities may include classroom and student organization presentations; Safe Zone, stress management and suicide response/education presentations; serving as housing liaisons; and leading intercultural dialogue groups.

Program Description

The Emory University Counseling Center (EUCC) provides comprehensive mental health and preventive services for a student population that is culturally & clinically diverse. In addition to working at EUCC, Fellows spend two half days per week working at Emory's Faculty Staff Assistance Program (FSAP), which provides outreach, clinical services, organizational intervention & consultation to Emory's 21,000+ employees & dependents. Fellows gain experience in individual, couples & group psychotherapy, outreach, intake assessments, consultation, teaching & supervision of practicum students, & crisis intervention. The EUCC is a multidisciplinary setting, with staff and trainees representing Counseling Psychology, Clinical Psychology, & Clinical Social Work; staff also have consultative relationships with University psychiatrists. A variety of theoretical orientations & intervention models are represented among the senior staff. The Center's model of training emphasizes three components: development over the course of the training year, mentoring relationships with senior professionals, & the importance of combining practice with science (practitioner/scholar model). Fellows at the Emory Counseling Center receive intensive, supportive training, which is designed to prepare Fellows for the diversity of roles which psychologists assume in their career paths. Postdoctoral Fellows have the opportunity to work with a variety of clients, cultural backgrounds, presenting problems and treatment modalities, & each Fellow also has the opportunity to work with an identified Specialty Supervisor in order to focus his or her training on a particular area of clinical interest. The 2000 hour Postdoctoral Fellowship meets or exceeds all requirements for licensure in the State of Georgia. EUCC's clientele is diverse in terms of age (from late teens to 60's), race, ethnicity, religion, national origin, gender, gender identity, sexual/affective orientation, disability status, & SES.

Program Description

The integrated postdoctoral residency program at the Pacific Islands Health Care System (PIHCS) and the National Center for PTSD (NC-PTSD), Pacific Islands Division (PID) has five postdoctoral residency positions in four emphasis tracks: 1) NC-PTSD (2 positions) with a PTSD focus, 2) Military Sexual Trauma and Women's Health (1 position), 3) Integrated Care (1 position), and 4) Psychosocial Rehabilitation and Recovery (1 position). The residency program is accredited by the American Psychological Association (APA) Commission on Accreditation (CoA), and the next site visit is expected in the 2012 academic year. The APA CoA can be reached at: 750 First Street NE, Washington, DC 20002-4242; Telephone: 800-374-2721; 202-336-5979; TDD/TTY: 202-336-6123. Please see our website for further training program information. <http://www.psychologytraining.va.gov/honolulu/>

Additional Information About Training Opportunities

Program Description

NOT UPDATED RECENTLY. CONTACT PROGRAM FOR INFORMATION.The TAMC Postdoctoral Psychology Training Practice Program strives to provide each fellow with advanced training. Fellows can choose from one of our three Specialty Training areas, Clinical Child Psychology, Clinical Health Psychology or Clinical Neuropsychology. The training includes workshops by Visiting Distinguished Professors, a significant emphasis on graduate-level training in psychopharmacology, Ethics Seminar Series, Specialty Areas Seminars, and case conferences. Fellows in each specialty area train to national standards. Clinical Health Psychology Fellows have the option of completing a research project of publishable quality or opt to complete a Master's in Psychopharmacology. Clinical Child Psychology and Clinical Neuropsychology required all fellows to complete a research project. The Clinical Child and the Clinical Neuropsychology fellows can also elect to participate in the Master Degree in Psychopharmacology. The training programs are housed at TAMC, a major teaching hospital, with residency and fellowship programs in a variety of medical disciplines. The Clinical Child Psychology, Clinical Health Psychology and Clinic Neuropsychology are accredited as separate Specialty training areas by APA. TAMC provides a rich environment for training and learning. Faculty of the Department of Psychology participate in ongoing programs of research in pediatric oncology, ADHD, telehealth, tobacco cessation, weight management, pain management, biofeedback, memory disorders, virtual reality, etc. Fellows receive training from faculty from various other disciplines including psychiatry, endocrinology, oncology, and pediatrics, and learn to work closely with physician colleagues. Refer to our webpage for further information or contact the director of training for copies of the Specialty Handbooks. Additionally, CAPS provides Postdoctoral Fellows opportunities to select year long specialized training: Gender and Sexual Identities Track (GSI) or in Mental Health Promotion and Prevention (MHPP). Fellows in the GSI track provide clinical services, education, liaison, and training to the Stanford community while Fellows in our Health Promotion Track teach a course in Peer Counseling and provide consultation, education, liaison, and outreach to the campus community. Postdoctoral Fellows provide 20 hours of clinical work per week. This includes weekly intakes, on-call coverage, consultations, referrals, short-term individual, couples, or group psychotherapy, and two long-term fee-paying students. Postdoctoral Fellows receive two hours of Primary Supervision, one hour of Specialty Supervision, and one hour of Case Consultation per week. Postdoctoral Fellows also attend a weekly team meeting and an Education Meeting.

Additional Information About Training Opportunities
Program Description

The Kapi'olani Child Protection Center's Post-Doctoral Psychology Fellowship Training Program was started in 1992 to provide specialty training in child clinical psychology with an emphasis in child maltreatment. The training program is part of KCPC's Training Institute, which includes Pediatric Residency training, Nurse Specialist training, Social Work Practicum, University of Hawaii Law Student Training and the Argosy University-Hawaii clinical psychology graduate practicum training. The program offers the opportunity to work in a multidisciplinary setting with multicultural families. The program provides 2,000 hours of supervised training within a one year period. Meets requirements for licensure in Hawaii & most States. Training on areas includes: Comprehensive psychological evaluations and report writing. Supervisors and Center Director observe initial psychological evaluations, provide feedback and supervise interpretation and report writing. Fellows complete an average of eight to ten child or adult comprehensive evaluations per month, focused on the impact of child maltreatment, parenting abilities and treatment/service planning. Referrals are screened and assigned according to increasing complexity throughout the training year. Psychotherapy training is ongoing throughout the training year. Intakes are presented weekly and cases are assigned with increasing complexity. Training in Family therapy for reunification with biological parents and Parent Child Interaction Therapy is also provided. Fellows participate with supervisors as co-therapists for group therapy. Caseloads average six to eight clients per week. Case Consultation training in working with Child Welfare Services Workers, Guardians Ad Litem, foster parents, school counselors, etc. Special training in mentoring children in foster care, substance abuse, expert testimony, psychopharmacology, diversity, etc. Supervision of Peer Mentors & Psychology Practicum Students.

University Counseling Center	1		

Program Description

The Edward Hines Jr. VA Fellowship Program in clinical psychology is an APA Accredited training program that prepares fellows for advanced practice in psychology. **For the 2014-2015 we will have 6 fellowship positions available.**

Our program's emphasis areas are: Medical Rehabilitation Psychology (1 position), Neuropsychology (1 position), Integrated Care Psychology (2 positions), Posttraumatic Stress Disorder (1 position), and LGBT Healthcare (1 position).

The overarching purpose of the program is to prepare postdoctoral fellows for advanced practice in psychology across a broad range of competencies. These competencies include: assessment; psychotherapy and intervention; consultation; program development and evaluation; supervision; teaching; strategies of scholarly inquiry and clinical problem-solving; organization, management and administration relevant to psychology; professional, ethical and legal conduct; and issues of cultural and individual diversity relevant to the above. Our Brochure provides greater detail about the structure of our fellowship program. We anticipate the 2014-2015 brochure being available online late-October 2013. To obtain our brochure and application materials sooner, please send your request to: caroline.hawk@va.gov and the materials will be sent to you via email.

Our application deadline is January 3, 2014. Candidates must have completed an APA-approved internship and an APA-approved doctoral program prior to start of fellowship. Candidates also must be US Citizens and must have registered for Selective Service if applicable.

Community Mental Health Center	1	2	
Private Psychiatric Hospital	1		

Program Description

Connection's Day School (CDS) is a private therapeutic day school, founded in 1998, that serves high-risk children and adolescents who require an alternative school program that is both educational and therapeutic. CDS utilizes therapeutic, educational, family and community connections to promote social/emotional well-being, academic achievement and personal growth. CDS Staff Members employ a variety of methods to support students in their efforts to make academic progress, appropriately manage their behavior, and develop their coping and social skills. Staff Members are able to establish and maintain supportive, nurturing relationships with our students by utilizing a combination of respect, humor, empathy, and kindness balanced with firmness (i.e., maintaining high expectations and ensuring that students adhere to established rules and boundaries). In turn, these relationships can help the students be more open to learning the life skills required for short and long-term success.

We are seeking highly-motivated individuals, who have experience working with challenging young people, and are interested in being an active part of our dynamic clinical staff. Our Post-Doctoral Fellows get consistent opportunities to provide Secondary Supervision for our 2 Pre-Doctoral Interns and 4 Psychotherapeutic Externs - our Fellows, Interns & Externs have all reported this training opportunity to be an extremely valuable learning experience.

Please see the Connection's Day School website: <http://www.connectionsdayschool.net/> to get general program information; and for specific information about our Fellowship program, go to the "Clinical Training" page of the website, and click on "Post-Doctoral Fellowship Program".

APPLICATION NOTE: Please send all application materials in the same e-mail (if this is impossible, please send them in as few e-mail messages as possible). Please organize all attachments in the following order: Cover Letter; Vitae; 3 Letters of Recommendation; Writing Sample & Transcript.

Program Description

The Forensic Psychology Training Program provides the following learning opportunities: Direct, face-to-face, contact with residents will be greater than 35% of the Fellow's time; other clinical activities will represent approximately 60%. Nonclinical activities will be included in the Fellowship (e.g., administration). Care will be taken to ensure these activities are kept to a minimum; less than 5% of the Fellow's time. The Fellow will receive two hours of licensed supervision each week: one from the Director of Training & Research and another from a Licensed Psychologist on staff. The format of supervision is trainee focused; addressing services provided and other topics the Fellow might bring. The Fellowship is a 2000 hours training experience involving the following learning opportunities: Treatment: co-facilitate 15 hrs/wk Sex Offender specific groups treatment with a senior staff member; and a primary caseload of 10-12 residents. A minimum of five psychological batteries will be completed during the year. The Fellow will be responsible for preparing detailed treatment plans and bi-yearly treatment plan reviews for the residents on the primary caseload. The Fellow will attend and participate in both the bi-weekly team staffing and the weekly case conceptualization. The Fellow will be providing supervision to an assigned Intern, which will focus specifically on psychological testing and report writing. Didactic training is committed to diversity awareness, knowledge, and the acquisition of skills to increase multicultural competencies. Three Multicultural case presentations will be required. During the training year the Fellow will be exposed to a broad scope of Forensic issues through various learning methods and opportunities. There will be the opportunity for research at the facility if this is an area of interest for of post doctoral trainees within child psychology. The goals of the fellowship are based on published guidelines and recommendations for training in Clinical Child Psychology as articulated by the APA Division 53's Board of Directors and Division 53 Task Force on Postdoctoral Accreditation in Clinical Child Psychology. Overall the clinical child psychology fellows receive between 4 and 6 hours a week of supervision. Efforts are made to arrange for supervision that will expose the trainee to a variety of theoretical orientations. All fellows spend one-half time in the Division of Child and Adolescent Psychiatry's Ambulatory Care Service. Fellows also spend 6-months on the Adolescent Inpatient Service. Based upon interest and prior experience, each fellow is also assigned to a 6-month elective rotation to either the Eating Disorders Program, the Trauma Psychiatry Program or Pediatric Psychology Program. The Medical Center serves a diverse clientele. We believe that diversity is a rich resource for personal and professional development. Candidates with diverse personal and demographic characteristics are strongly urged to apply.

	2008-2009	2009-2010	2010-2011
Still a postdoctoral fellow		3	6
State/County/Other Public Hospital	3	3	6

Program Description

Applications for the program should include: 1) CV 2) Two sanitized reports (one psychological evaluation and one other—forensic, neuropsychological evaluation, etc) 3) Cover letter outlining interest in LSH and license plan (e.g., planned graduation dates and plan to obtain temporary license in Kansas) 4) Graduate school transcripts 5) Three references (one of which being a current supervisor) Fellows will complete a 12-month rotation on one of the three programs at Larned State Hospital (LSH): 1) State Security Program (SSP) 2) Psychiatric Services Program (PSP) 3) The Sexual Predator Treatment Program (SPTP). On SSP, all fellows will be exposed to working with criminally committed patients. Fellows will complete various forensic evaluations (e.g., competency to stand trial assessments, mental state at the time of the offense determinations, sexual predator evaluations, and pre-sentence evaluations), provide treatment, and serve as a treatment team facilitator. On PSP, all fellows will be exposed to working with patients either voluntarily or involuntarily civilly committed by court for inpatient treatment due to psychiatric issues causing them to be a danger to themselves or others. Fellows will serve as a treatment team facilitator, provide therapy, and complete various assessments. On SPTP, all fellows will work directly with sex offenders who have been found to meet the criteria of Sexually Violent Predators pursuant to Kansas law. Specific activities will be assigned by the Supervising Psychologist of SPTP and will include psychological testing, serving as a treatment team facilitator, report writing, facilitating various therapy groups including phase groups, DBT groups, Co-Occurring Disorders groups, and individual therapy. As a post-doc, court testimony is also likely to occur during the training year.

Additional Information About Training Opportunities**Program Description**

NOT UPDATED RECENTLY. CONTACT PROGRAM FOR INFORMATION. The counseling or clinical psychology post-doctoral fellowship is a full-time 12-month temporary position. The start date is to be arranged. It is designed for advanced training and supervised practice to prepare an individual for a staff psychologist position in a university counseling service. Duties include 2000 hours of supervised practice in professional psychology activity within the counseling service and also with special assignment to the athletic department including athlete referrals, biofeedback, team and individual consults, performance enhancement class, psychological support for injury rehabilitation. Kansas State University Counseling Services is a comprehensive counseling service located in a comfortable, attractive facility. We have an interdisciplinary staff including counselors, psychologists, psychology interns, and a psychiatrist. We are an APA accredited training site for pre-doctoral psychology interns and a practicum site for students in a counselor education program. The service includes an alcohol and other drug prevention program, a stress management/biofeedback laboratory, and a career development program that includes credit classes. The mission of the service is to support the educational goals of students through the process of decision-making, crisis intervention, and personal skill building. Education and prevention are a major part of the agency purpose. While students are seen and evaluated with a wide range of student concerns, those requiring intensive, long-term treatment may be referred to outside agencies. Kansas State University is a land grant institution of 23,000 students in Manhattan, KS a city of 45,000 in the beautiful Kansas Flint Hills. There are abundant recreational, cultural and educational activities in the area. Kansas State University is an equal opportunity employer and actively seeks diversity among its employees.

Additional Information About Training Opportunities

Program Description

*** INFORMATION MAY BE OUTDATED. PLEASE CONTACT PROGRAM DIRECTLY FOR INFORMATION.***The University of Louisville School of Medicine, Division of Child, Adolescent & Family Psychiatry, Department of Psychiatry and Behavioral Sciences, has provided postdoctoral fellowship for candidates desiring specialization in pediatric health psychology since 1993. The fellow assumes administrative and clinical responsibilities in an innovative outpatient project treating adolescents with chronic painful and fatiguing conditions: the Children's Health and Illness Recovery Program (CHIRP). Currently recruitment and data collection are underway to assess for treatment effectiveness with opportunities for presentation and publication of this data. Additionally, the fellow maintains primary responsibilities providing inpatient consultation-liaison services within a tertiary care Children's Hospital. Patients with a variety of chronic illnesses and serious medical problems (cystic fibrosis, childhood cancer including bone marrow transplantation, chronic fatigue syndrome, fibromyalgia, juvenile diabetes, kidney disease, heart transplantation, traumatic injury, brain injury, burns, etc.) are routinely seen on this service, with opportunity for outpatient involvement. The fellow participates in individual and group supervision, seminars, case conferences, and service rounds. The division also maintains an APA-accredited (since 1986) predoctoral internship in clinical child/pediatric psychology. There is opportunity to supervise a doctoral-level practicum student providing outpatient therapy services, conducting assessments, and engaging in inpatient consultation-liaison. The multiple facilities of the University of Louisville Health Sciences Center, Norton/Kosair Health Care System, and the Bingham Clinic provide state-of-the-art resources for the training program.

Additional Information About Training Opportunities**Program Description**

CONTACT PROGRAM FOR CURRENT INFORMATIONThe Postdoctoral Fellowship Program in Pediatric Psychology is designed to provide trainees with assessment and therapy experiences that are consistent with the professional expectations of a pediatric/child clinical psychologist. The goals of the fellowship are to familiarize the trainee with pediatric populations, to introduce assessment and therapy techniques that are relevant to and adapted for the acutely or chronically ill child. The fellowship is also designed to provide experience working with child and adolescent outpatient populations and their families, and to promote professional development through experience within an interdisciplinary model. A mentoring model of training is followed and consists of assigning the Fellow to one primary supervisor for the entire year, with additional supervision provided by staff involved in the trainee's specialty rotations. In addition to verbal feedback, training will consist of observation and modeling from staff in clinical settings. Fellows will receive at least two hours of individual supervision and one hour of group supervision on a weekly basis throughout the fellowship year. The supervision provided meets post-doctoral supervision requirements for licensure by APPIC and the Louisiana State Board of Examiners of Psychologists. A competitive stipend is provided for the 12-month fellowship position. The hospital also provides a full benefits package for the fellow. Applicants should send a letter stating their interests and goals, a current vita, and 3 letters of recommendation prohibited by VANTHCS.

Additional Information About Training Opportunities

<html />

Program Description

We offer and implement advanced Clinical Psychology training within a rural psychology context, in accord with a scholar-practitioner model. In the process of rebuilding a formal research program, we identify with and conceptualize from a scientist-practitioner model. We offer advanced postdoctoral training within the traditional practice area of Clinical Psychology, with an emphasis in Posttraumatic Stress Disorder/Mental Health. At the postdoctoral level, we aim to train ethically grounded, culturally aware clinical psychologists with advanced competency in thoughtful development and application of evidence-based psychological assessment, treatment, and consultation skills for the benefit of persons and organizations, particularly within a rural environment. Training consists of 2080 hours per year with training experiences in at least two different treatment settings. We are located on spacious wooded grounds five miles east of Augusta, the state capital of Maine. The Clinical Psychology positions represent a one year appointment. Start date is variable: July 1, August 1, or September 1.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
Still a postdoctoral fellow	7	9	8
Community Mental Health Center	1	1	
General Hospital	1	1	
Other Medical Center	5	6	

Program Description

The Department of Behavioral Psychology provides clinical services to a variety of pediatric populations with learning, behavioral and developmental disabilities. The Department's philosophy is that the principles and procedures of behavioral science form the basis for effective and ethical clinical services. Fellows typically elect to develop their expertise through advanced training in one or two clinical services under the direction of an identified mentor(s). Specific training opportunities include hospital consultation in severe behavior disorders, family therapy, pervasive developmental disorders/autism, and pediatric feeding disorders in both outpatient and inpatient programs. Research participation is strongly encouraged and typically integrated into clinical experience. Fellows have the opportunity to work with their mentor to tailor the training experiences to meet their needs with regard to clinical, supervisory, research, and didactic training.

Fellows complete their 12-month training in one clinic, rather than completing rotations across clinics. Applicants are encouraged to specify the clinic(s) in which they are interested.

Please note, we require a background check prior to final acceptance into our postdoctoral fellowship program.

Additional Information About Training Opportunities

Major rotations include advanced training in evidence-based assessment and intervention with veterans who have been diagnosed with PTSD and comorbid diagnoses (e.g., substance use disorders, anxiety disorders, adjustment disorders) in both outpatient and residential settings. Minor rotations include opportunities in telemental health, Emotionally Focused Couples Therapy for PTSD, Mindfulness-based cognitive therapy interventions, vertical supervision, administration of a specialty clinic in the PTSD clinical team, and policy implementation and development at the Defense Centers of Excellence (DCoE). Please see our website for full details on major and minor rotation training opportunities.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
Veterans Affairs Medical Center	1	1	2
Private General Hospital	1		

Program Description

The postdoctoral fellowship in Trauma Recovery emphasizes one of the signature injuries of the most recent conflicts: PTSD. This fellowship has goals of training and refining skills in assessment, treatment, consultation, research, supervision, and administration relating to the specific needs of returning veterans, as well as facilitating the development of fellows from trainees to independent psychologists. Our program philosophy is to base both the process and the content of training in research, with the goal of developing psychologists who apply scientific method and knowledge to the assessment and treatment of chronic PTSD. The Trauma Recovery fellowship is a one-year fellowship designed to allow the fellow to experience assessment and treatment of trauma spectrum disorders across residential and outpatient programs. The fellowship adheres to the APA Guidelines for Accreditation for postdoctoral fellowships, with respect to providing education and training in preparation for entering professional practice at an advanced level of competency, consisting of a sequence of clinical activities that are characterized by greater depth, breadth, duration, frequency, and intensity than internship training, focused on the assessment and treatment of PTSD. The program is designed to prepare students for clinical careers in a VA medical center, with specialization in PTSD. The fellowship is a full-time work commitment, with an average of 40 hours worked per week. Trauma fellows distribution of effort will be approximately 60% clinical, 20% didactic, and 20% research/administrative/policy implementation. The emphasis of the program is on development of clinical skills; however, there is an expectation that fellows would participate in ongoing research and program development with others in the study and treatment of veterans who are at risk of suicide. There is an emphasis on the neurobiology of individuals with severe psychiatric disorders who are at risk for suicide.

Program Description

The program is a two-year postdoctoral fellowship in clinical neuropsychology. The program is designed to produce an advanced level of competency in the specialty and to prepare graduates for board certification. Training is based on written objectives that fellows must meet for graduation. Approximately 50% of the fellow's time is spent in direct clinical services and 10-20% in research. Training activities include: (a) closely supervised training in neuropsychological assessment of adults; (b) organized didactic training in clinical neuropsychology; (c) medical school neurosciences course; (d) neurology and neurosurgery rounds; (e) case conferences, invited speakers, and outside educational activities. All fellows are active duty military officers. Further information about the fellowship can be found on the Walter Reed National Military Medical Center web page under the Graduate Medical Education section.

Program Description

The program offers positions within six areas of emphasis: * Center for Psychotherapeutic Change (CPC): In collaboration with Psychology staff, two residents will assume administrative and program development responsibility within the CPC. Residents engage in a range of individual and group therapy, with a particular opportunity to pursue one's particular interests. * Interdisciplinary Psychosocial Rehabilitation (PSR): Within this position, the resident will become part of a team of post-graduate fellows. Residents train within two primary PSR venues, and will also become actively involved in program development and educational dissemination. * Primary Care Behavioral Health (PCBH): Residents fully participate in all aspects of an integrated PCBH program. In addition, residents will be a part of a collaborative training program with the UMass School of Medicine. * Intimate Partner Violence (IPV) The resident will be trained in the provision of evidence-based treatment for IPV victimization and perpetration within an innovative program to assist veterans who use violence or have been victimized by IPV. * Smoking Cessation Treatment Program: The resident will engage in motivational enhancement and other empirically-based interventions via individual and group psychotherapy with veterans who smoke. Opportunities for research also exist. * Neuropsychology: Within this 2-year residency, the resident will engage in neuropsychological assessment along with supervision of neuropsych interns and practicum students. The resident spends one full day/week at the Alzheimer Disease Center, where a range of research opportunities and clinical work are available. The philosophy of the program involves an integration of training from four primary domains: clinical; program development and administration; supervision and teaching; and research. The resident is afforded considerable flexibility regarding training experiences and clinical focus.

Program Description

All requirements (clinical, academic, administrative) for the doctoral degree must be completed prior to September 1, 2014.

Training Programs: The VA Boston Psychology Postdoctoral Fellowship consists of 2 APA Accredited Training Programs: Clinical Psychology and Neuropsychology.

CLINICAL PSYCHOLOGY (1 year, recruiting for 11 fellows), recruiting in the following tracks: Geropsychology; General Mental Health; Interprofessional Mental Health; LGBT Health Care; Post-Deployment Readjustment and Substance Abuse; PTSD; Substance Abuse Treatment Program; Dual Diagnosis, and Behavioral Medicine.

NEUROPSYCHOLOGY (2 years, recruiting for 1 fellow).

Philosophy and Mission: The mission of the VA Boston Psychology Postdoctoral Training Program is to produce independently functioning psychologists. Our model for training entails four core components: (1) To identify, respect, and nurture the unique personal attributes that the Fellow brings to his or her work with patients, by providing an environment with support and guidance through supervision and collaboration with faculty actively working in the field; (2) To encourage and model a scientist-practitioner approach to professional psychology, wherein empirically-informed knowledge informs psychological assessment and intervention with adults and wherein questions arising from clinical practice drive research endeavors; (3) To provide a range of training settings and experiences that allow Fellows to develop a breadth of expertise in psychological practice, as well as options for developing more specific interests in depth; (4) to provide training in multidisciplinary and interdisciplinary care environments in which the Fellow develops confidence as a local mental health expert who collaborates

Program Description

The fellowship is designed to provide postdoctoral fellows with a training experience that is first, concentrated on deepening their diagnostic and clinical skills, and second, representative of university mental health practice today. We are a relatively large counseling service, highly utilized on this campus of over 14,000 undergraduate and graduate students. In this setting fellows are actively engaged in the varied roles and functions of our work: evaluation and treatment of students; crisis and emergency response; consultation; and outreach programming. Boston College (BC) students are diverse and talented. At an institutional level, BC is invested in the integration of students' intellectual development with their personal formation. This makes for a psychologically rich population with which a fellow can explore closely and intensively the practice of psychotherapy. A fellow's clinical work and individual supervision, which are the core of his/her training, are embedded in the more encompassing experience of being part of a clinical staff that is committed and thoughtful in its work. In formulating client difficulties, we emphasize psychodynamic, developmental, and culturally sensitive approaches. Formal training functions include individual supervision (2 hrs weekly); case conference; group/peer supervision (1.5 hrs weekly); Multicultural issues discussion group with discussion on diversity and other clinical issues; a professional practice seminar; and administrative participation. Distinct features of this advanced training experience include: 1) fellows generally advance their formulation and treatment-planning skills significantly; 2) they learn psychotherapy process with a particular class of clients who are high-functioning while also very troubled diagnostically; and 3) they develop a practical understanding of the intersections of psychopathology with developmental forces. This is an eleven-month fellowship.

Program Description

The Austen Riggs Center is a Joint Commission accredited not-for-profit private psychiatric hospital and residential treatment center with 65 patients and 25 full-time Ph.D. and M.D. staff. Situated on Main St. in the Berkshire Hills town of Stockbridge, the Center has maintained an open setting for over 90 years in which patients collaborate in all aspects of treatment. A psycho-social treatment model, drawing on the work done at Riggs by Erik Erikson and other psychoanalysts, includes four times weekly intensive psychotherapy, groups, medication, activities, and family work in the context of an active therapeutic community of examined living. A full range of assessment, including diagnostic psychological testing, is provided to each patient. At least ten hours per week are devoted to seminars, supervision, and case conferences. Research opportunities are available and presentations at national meetings are encouraged and fully supported. This is a four-year Fellowship with benefits such as health and life insurance, annual vacation, and 2 years of psychoanalysis. We require a doctoral degree from an APA-approved program and APPIC-approved completed internship.

Additional Information About Training Opportunities

Post-docs are exposed to nearly all of these domains over the course of their fellowship by the nature of the seamless integration into primary care. No specific area is emphasized; however, post-docs are allowed to and encouraged to develop areas of concentration within primary care, such as chronic pain management, PTSD, etc.

	2008-2009	2009-2010	2010-2011
Still a postdoctoral fellow			2
Veterans Affairs Medical Center		1	
Other Medical Center		1	

Program Description

Please refer to website. A few candidates will be selected for on-site interviews. Applicants are strongly encouraged to interview. Interviews dates are not yet determined for 2014. There will be openings at 2 different health centers (Hahnemann and Family Health Center). YEAR ONE Clinical practice and consultation in primary care for 6 half-days/week; observing and teaching resident physicians; seeing patients jointly with physicians; assessment and short-term treatment for patients referred by physicians in the practice. Program for School Aged Children (1/2 day/week) is a family therapy oriented brief assessment and treatment clinic. Fellows learn in front of the one-way mirror with live supervision from Dr. Blount and a developmental pediatrician. Family Medicine Inpatient Service (2 mornings/week with rotating block schedule). Fellows spend one half-day in the hospital providing clinical care with teams of family medicine residents. Team precepting (1/2 day/week) is a process in which a medical faculty member and a behavioral science faculty provide training to a family medicine resident who sees his or her patients in front of the one-way glass. Weekly didactics. Seminar in Primary Care Psychology; Fellows take and often help teach the Certificate Program in Primary Care Behavioral Health. A description of the program can be found at www.integratedprimarycare.com/Certificate%20Program_Email.htm. Teaching medical students in their family medicine clerkship also occurs across both years. YEAR TWO Continuation of Year 1 activities, Plus: 2 half-days per week will be devoted to begin to practice an integrated clinic at a different primary care clinic. Fellows also initiate and pursue their own research project, or in collaboration with a family medicine resident, and dedicate one half-day/week to this project. Often there are opportunities for supervision of interns or practicum students in the second year.

Program Description

We anticipate 2-4 postdoctoral positions available for 2014-15, 1-2 adult-focused and 1-2 child/adolescent-focused: The University of Michigan Institute for Human Adjustment Postdoctoral Fellowship Training Program is designed to provide advanced training in professional psychology to qualified postdoctoral psychologists. Training is based in either the Psychological Clinic, a multidisciplinary training-focused adult outpatient center, or the University Center for the Child and Family, a comparable clinic serving children and families. Both clinics have a welcoming and supportive atmosphere. The training prepares fellows for licensure in the State of Michigan (or any other state with similar requirements) through a one year full time program that provides robust, advanced training in many key professional competencies (two year option is available if desired). These competencies include assessment and diagnosis, psychological testing, intervention including individual and couples therapy, consultation and interdisciplinary collaboration, multicultural competencies, clinical teaching and supervision, professional development, ethics, and leadership/administrative skills. These competencies are enhanced through direct clinical service with supervision from expert clinicians, participation in seminars and clinical meetings and conferences, consultation with other professionals outside the Clinic, teaching of seminars to psychology interns and social work students, supervision of clinical work conducted by social work and psychology students, and participation in the Clinic's senior staff meetings and work-groups.

Additional Information About Training Opportunities**Program Description**

Our Post-Doctoral Fellowship is a twelve-month, full-time experience. (Full Michigan licensure requires 2000 post-doctoral hours.) The intent of this program is to support new professionals during the transition from internship to licensure. Fundamental to this program is our value of working in multicultural, multi-disciplinary and multi-theoretical environment, which we believe enriches us both personally and professionally. We strive to create a micro-community at CAPS that reflects the university and mental health fields at large. Post-Docs are expected to value and respect collaboration, teamwork, effective conflict processes, self-awareness, and openness to learning. Post-Doctoral Fellows receive supervision, mentoring, and participate in a weekly seminar. Post-Docs provide service in: intake evaluation; individual counseling and psychotherapy (both brief and longer when appropriate); crisis intervention and emergency services; third party consultation; outreach; program development; group interventions (structured, semi-structured or process groups); and supervision of practicum students. Opportunities are available to conduct clinical screening assessments of substance use/abuse, eating issues and ADHD. Fellows also serve on agency committees. In addition, Post-Doctoral Fellows will choose an area of specialization. Examples include but are not limited to: 1. Administration (clinical, training, or outreach) 2. Clinical Practice (anxiety; eating disorders; multicultural counseling, etc.) 3. Outreach (to specific campus communities, campus substance abuse network or eating issues network, etc.); or 4. Clinical Scholarship/Writing. Additional program information and learning supports are described on our web site: www.umich.edu/~caps.

Additional Information About Training Opportunities

Program Description

This is a 2-year training program. The three tracks are APA-Accredited. The training of our residents is based on the scientist-practitioner model. We hope to prepare psychologists for academic careers or positions of leadership in clinical and educational settings. The core curriculum exposes residents to cutting edge topics in psychology and health care, and enhances residents' understanding of medical/legal issues, ethical dilemmas, career development, EPPP, grant writing skills, sensitivity to cultural diversity and eventual ABPP Board Certification in their specialty. The Clinical Psychology program focuses on depression, anxiety, sleep, and clinical outcome, and emphasizes scientific behaviorism and learning theory. Residents are expected to become knowledgeable about and to employ empirically-supported interventions for the treatment of self-management and self-regulation disorders, anxiety, depression, sleep disorders, and various other psychiatric conditions. The Clinical Child Psychology specialty program emphasizes the developmental and social contexts of child psychopathology, and the use of empirically validated assessments and interventions. Residents gain expertise in diagnosis, assessment, and treatment of children with a wide range of psychological difficulties. They also participate in clinical research and prepare to function as independent, programmatic researchers. The Neuropsychology specialty program participates in the APPCN match process for matching applicants. This program provides advanced training in the application of knowledge of brain-behavior relationships for the benefit of patients suffering from cognitive disorders, disease, or injury to the central nervous system. All residents in this program are encouraged to participate in pediatric neuropsychology training. We are in the process of forming consortia with the VA Ann Arbor for Clinical Adult and Clinical Neuropsychology programs.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
Still a postdoctoral fellow			2

Program Description

Clinical Health Psychology (CHP)CAPT is accepting applications for three fellowship positions in our 24 month CHP program to start September 2014. The program follows a clinician-educator model that allows fellows to 1) develop advanced competency in CHP, 2) assume leadership roles in medical education and supervisor training, 3) develop expertise in hospital and ambulatory practice involving a transdisciplinary model with a team process approach; and 4) make meaningful scholarly contributions to the field. Specialty experiences vary by site. However, a wide variety of health psychology populations may include; Integrated Primary Care, Chronic Pain Management, Inpatient Consultation Liaison, Bariatrics, and Geriatrics. Additionally, a major component of this fellowship includes medical education. Fellows are expected to provide teaching to resident physicians (this may be Family Medicine, Internal Medicine, Obstetrics and Gynecology or Orthopedic Surgery) and medical students from Michigan State University College of Human Medicine. Fellows will receive academic faculty appointments at Michigan State University College of Human Medicine. Online application process begins October 1, 2013 for September 2014 positions.

Program Description

MCARPT is an alliance of behavioral health professionals, mental health agencies, social service providers, medical health facilities and both federal and tribal government facilities along with allied agencies located in rural Becker and Ottertail counties along with the White Earth Reservation. The primary goal of MCARPT is to recruit and prepare doctoral level psychology graduates to assume positions of healthcare leadership in rural and frontier communities. The MCARPT program subscribes to a practitioner-scientist training model. It is our belief that professional psychologists are uniquely trained to assume clinical, teaching and leadership roles in rural communities. We value the combination of scholarship, academics, familiarity with research in psychology, and the ability of these to directly inform applied practice. MCARPT envisions the one year postdoctoral training experience as the minimum necessary preparation for trainees to assume positions of psychology leadership in rural areas. As rural psychologists are by nature and by need, generalists, the MCARPT program strives to provide supervised training in a diverse spectrum of ages, patient populations, patient problems, psychopathology, and treatment modalities. Further, MCARPT emphasizes the understanding and appreciation of the unique needs, culture, and customs of rural America to optimally deliver services. The MCARPT program is based on the acquisition and mastery of 11 core competencies that MCARPT believes are necessary to function as a psychologist clinician, consultant, teacher and community leader in rural areas. The selection and design of the rotational sites and curriculum is heavily dependent on their relationship to the core competencies of rural practice. All clinical activities of the fellowship are based on their relationship to these competencies and it is these values that drive the continuous quality assurance and ongoing evolution of the training program.

Additional Information About Training Opportunities

Program Description

We have two different postdoctoral fellowships. One is in human sexuality and the other is in behavioral medicine. There is sometimes an opportunity for some fellows to have a split fellowship if desired. This is a two-year full-time fellowship with an outstanding faculty and extensive supervision provided. The emphasis is on clinical experience and training, however there is a required research or scholarly project requirement as well. The human sexuality fellowship is offered through the Center for Sexual Health which is an outpatient clinic which treats a variety of sexual disorders and dysfunctions (average 1300 patient visits per month). This is an ideal fellowship for someone who is interested in developing a career in sex therapy, teaching and research or adding this specialization to their training and experience. Our patients have a number of comorbid Axis I and Axis II diagnoses, so there is ample opportunity to learn to manage a myriad of psychiatric problems as well as treatment of sexual dysfunctions and disorders. The Program in Human Sexuality is one of the premier sexuality programs in the country with an internationally renowned faculty. We anticipate two openings in September, 2013. There is a possibility that we might add one additional fellow position but that still depends upon funding. The behavioral medicine fellowship is offered through one or two of our family practice clinics which are training sites for family practice residents. This is an excellent opportunity to be involved in behavioral medicine in a busy outpatient family practice clinic serving an ethnically diverse and urban client population. The fellows are also involved in the behavioral medicine teaching component of the residency training program. We had one fellow complete in 2009 and another in 2012. We added a new fellow in September, 2011 and will be adding a second fellow in September, 2012. We anticipate another opening September, 2013.

Program Description

The Indian Health Board of Minneapolis is a Federally Qualified Health Center (FQHC) with medical, dental and Counseling & Support on site. Training within Counseling & Support is based on a practitioner model with a primary goal of equipping emerging mental health professionals with the highest quality skills for addressing the health disparities and mental health needs of the American Indian community in a culturally sensitive and proficient way. Theoretical orientations of staff are varied and include conceptualization from object relational, systemic, interpersonal, psychodynamic, feminist and cognitive behavioral perspectives. Postdoctoral fellows provide outpatient therapy to children, adolescents and adults; perform psychological assessments; and, develop a project, such as a group or other intervention.

Program Description

Our training program follows a Scientist Practitioner model with an emphasis on mentoring and self-directed development, and training which provides both breadth with depth. We emphasize a scholarly approach to clinical work and an integration of scientific data into the varied training experiences. Residents choose an area of special emphasis including Primary Care/Health Psychology, Rehabilitation Psychology, or Serious Mental Disorders. We also have an accredited program (1 2 year position) in Clinical Neuropsychology.

Program Description

The Medical Psychology Fellowship Program at Mayo Clinic Rochester is designed for recent graduates of an APA-Accredited Clinical or Counseling Psychology Doctoral Program and an APA-Accredited Predoctoral Psychology Internship who wish to acquire specialty training in one of three specialty practice programs offered in this fellowship: Clinical Child Psychology, Clinical Health Psychology, or Clinical Neuropsychology. The fellowship prepares doctoral-level psychologists for a career in an academic medical center by offering them clinical training, integrated with teaching opportunities and research in the scientist-practitioner tradition of training in psychology. Clinical service areas and research training opportunities are available to you to ensure you are provided an integrated experience that is relevant to your needs and career goals. Clinical Child Psychology: Clinical training and research in pediatric psychology (chronic medical conditions such as pain, POTS, chronic illness, diabetes and obesity), clinical child psychology (anxiety disorders, eating disorders, mood disorders, and externalizing disorders) and assessment in outpatient, day treatment and inpatient settings. Application Deadline: 1/15/14. Clinical Health Psychology: Multidisciplinary clinical training and research in major rotations including: Behavioral Medicine Program, Obesity Program, Pain Rehabilitation Center, Primary Care Psychology, Psycho-Oncology Service. Application Deadline: 1/06/14. Clinical Neuropsychology: Clinical training in diagnostic neuropsychology evaluations of a wide range of neurological, medical, and psychiatric conditions in children/adolescents and adults; inpatient and outpatient rehabilitation of adult patients with epilepsy, spinal cord injury, multiple sclerosis, dementia, stroke and traumatic brain injury. Limited rehabilitation experiences in pediatric populations. Member of APCPN. Application Deadline: 12/20/13

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
Still a postdoctoral fellow			1
Veterans Affairs Medical Center	1		

Program Description

The Rural Mental Health Fellowship's training model is scientist-practitioner in nature as our program strives to provide a research training environment which fosters a coordinated blend of research and informed application. The goal is to train competent generalists whom can advance theoretically based empirically driven services, policy, and research that effectively enhances the quality and form of healthcare provided to rurally living individuals and communities. The program philosophy is that psychological training is developmental in nature and is a process which we engage in, and foster, through provision of structured, developmentally sequential, experiential and educational learning opportunities. We strive to provide a learning environment which promotes ongoing professional development and the attainment of professional competencies and skill-sets. Further, our program envisions and creates a training environment wherein the Postdoctoral Fellow is equivalent to a GS-11 staff psychologist. The Fellow, while being supervised, is acquiring a specific skill-set through graduated learning opportunities as coordinated by an individualized training plan which weds general programmatic goals and objectives with the Fellow's identified career development goals. Please see web brochure for additional information.

Additional Information About Training Opportunities**Program Description**

Training Model and Program Philosophy Fellowship training at the GVSM VAMC is rooted in the Scientist-Practitioner model. Fellows receive mentoring in the use of scientific methodology to guide their decision making and skills in: Clinical practice; Using scientifically valid assessment methods, tools, and techniques; Utilizing and adapting evidence-based treatment modalities with different clinical populations; Learning to inform their Veterans of scientifically-based findings and approaches to their problems; Building and maintaining effective teamwork with other healthcare professionals that supports the delivery of scientist-practitioner contributions; and Evaluating and disseminating, clinically relevant, practice-based, research. Our underlying philosophy is that clinical psychologists should be well-prepared to apply empirical sciences towards the: 1. Amelioration of maladaptive, dysfunctional, and abnormal behavior in individuals, families, groups, and communities; 2. Relief of human suffering; and 3. Promotion of adaptive, fulfilling, and more meaningful living patterns in which people can thrive. The primary theoretical orientation of our faculty is cognitive-behavioral. However, we believe that any knowledge or principle, which is scientifically derived and/or validated, may be considered and incorporated into practice.

Additional Information About Training Opportunities**Program Description**

Please see our website www.psychologytraining.va.gov/kansascity/ for more detailed information and application instructions. The postdoctoral residency is in clinical psychology with a mental health focus emphasizing substance abuse and PTSD treatment, with opportunities in other aspects of mental health, including evidence-based practices. Inpatient and outpatient experiences in mental health and substance abuse are available. In addition, some introductory experiences in neuropsychology, and health psychology may be available. The philosophy of training at the KCVAMC is best described as a "scholar-practitioner" model. The training experiences have a strong clinical focus. However, knowledge and use of empirically supported processes and interventions are expected and encouraged in all aspects of the program. At the end of the program, residents will be prepared to function autonomously as practicing clinical or counseling psychologists in a broad range of applied, teaching, and research settings. Applicants must have completed an APA accredited doctoral program in clinical or counseling psychology, including an APA accredited internship, prior to the residency start date. Preference is given to students who have completed their dissertation at the time of their application. We especially encourage applications from students with knowledge and experience in diversity issues. Applicants are required to have a strong interest in mental health issues and treatment with long-term goals to provide service and contribute to this area in psychology. In addition, residents must be interested in studying and utilizing different theoretical orientations that have evidence-based or empirically supported elements of treatment. Candidates must be citizens of the United States.

Program Description

Our one-year, full-time pediatric psychology postdoctoral training program is housed within the Department of Psychology at St. Louis Children's Hospital. We serve a diverse population of families from urban and rural settings, range of SES, range of ethnic diversity, ages (newborn-young adult), referral concern, and disease presentation. We are primarily a clinical training program, with several year-long primary clinical rotations and the opportunity to choose two 6-month elective rotations that allow for additional specialty training in specific disease areas. Formal and informal didactic opportunities exist within our department as well as within the Washington University School of Medicine Departments of Pediatrics and Child Psychiatry. We offer an individualized training program that allows us to tailor training opportunities to the specific clinical and professional needs of the resident. The resident is a valued neuropsychology of PTSD and evaluation of traumatic brain injuries. Training in all these settings highlights varying presentations of post traumatic stress as seen in different age cohorts and types of trauma. Supervised experience in supervising interns and practicum students in both group and individual settings is provided. Finally a series of didactic seminars complement the clinical experiences of the residency. Research and scholarly activity are viewed as integral parts of the postdoctoral training experience. To this end, residents will be provided with up to 20% of their training time to complete a research, scholarly, or program development project commensurate with their interests and areas of PTSD Program staff expertise. The residency received initial funding in the fall of 2007 with our first class beginning in September 2008. Residents will join well established and fully accredited Psychology training programs at the internship and practicum levels.

Additional Information About Training Opportunities

Program Description

The mission of the postdoctoral residency is to provide a structured training program designed to develop advanced competency in clinical practice and program evaluation. The resident will be required to spend part of their time in specific research and program evaluation activities and part in providing direct services. The primary theoretical orientation of Burrell clinicians is cognitive-behavioral, but most would describe themselves as eclectic. Clinical area options include medical psychology; child or adult treatment in inpatient and/or outpatient environments.

Additional Information About Training Opportunities

Program Description

St. Louis Behavioral Medicine Institute (SLBMI) is an academic affiliate of St. Louis University Health Science Center. Our primary mission is to provide state-of-the-art, specialized services for various disorders and patient populations. Our Postdoctoral Positions include opportunities for group and individual treatment modalities as part of our multidisciplinary teams: 1) Anxiety Disorders Center, 2) Dual Program: Psychology and Religion Program / Anxiety Disorders Center. Anxiety disorders work is done primarily in the context of a cognitive behavioral intensive outpatient program for people with severe anxiety disorders, including obsessive-compulsive disorder, panic disorder, generalized anxiety, social anxiety, post-traumatic stress, phobias, and related problems. Anxiety Disorders Center residents are provided ongoing training in evidence-based treatments for Anxiety Disorders. The Dual Program resident works with both the Psychology and Religion team (providing treatment of obesity with religious professionals, integration of spirituality and evidence-based practice, and comprehensive psychological assessment) and the anxiety disorders team (providing intensive cognitive behavioral treatment for people with severe anxiety disorders). Appointments are for 1 year with possible renewal for an additional year. In general, training in most programs follows a clinical preceptorship model with two hours of individual supervision per week, plus seminars and group/peer supervision. Requirements include APA-accredited doctorate degree and internship completed. Submit application form and send 3 letters of reference, copies of relevant publications, CV, and graduate transcript. Application forms and program description may be found at www.slbmi.com. Application deadline February 15; selections made by March 15 or until filled. An Equal Opportunity/Affirmative Action Employer.

Program Description

The APA accredited VA St. Louis Health Care System postdoctoral program offers 4 residency positions. Psychosocial recovery (SMI), primary care mental health integration (PCMH), and posttraumatic stress disorder (PTSD) emphasis areas are each 1 year programs, while the neuropsychology position is a 2-year position (new position starts 2014). Psychology Residents are included in all aspects of their clinical training teams as well as ongoing activities within the psychology service. Residents have opportunities to conduct supervision with interns and/or practica students. Residents have their own independent seminar schedule for more advanced exploration of clinical concepts. They are invited to join psychology service committees and to participate in hospital committees if interested. Residents in our program work alongside trainees and providers from a variety of disciplines, increasing multidisciplinary awareness and collaboration skills, and have the opportunity to learn about delivery of services in the largest health care system in the country while also serving our nation's Veterans. Our psychology staff and supervisors are passionate about the work they do, and enthusiastically committed to developing the next generation of psychologists! Please do review our brochure for more information.

Program Description

The Clinical Psychology Residency program focuses on learning the supervision and management of mental health patients, staff, finances, and facilities. Further learning in psychometrics, diagnostics, evaluations, and intervention continue to be a strong part of the training experience. This is a 2 year position. Opportunity exists for residents to specialize further in neuropsychology and medical psychology/psychopharmacology effectively with a range of providers in the context of a large medical care system.
 We are an Equal Opportunity Employer committed to excellence through diversity.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
Other Medical Center	1		
University Teaching Faculty		1	1

Program Description

Note: Not accepting applicants for 2014
The Nebraska Medical Center Department of Psychology has clinical and neuropsychologists with expertise in a wide spectrum of clinical services and research skills. The department cares for adults and children and provides inpatient and outpatient services. During the fellowship, the training committee provides structure and guidance to help satisfy the training and supervision requirements for independent licensure and meet the training needs for independent practice. Clinical health psychology training is based upon education and training guidelines as endorsed by the Council of Health Psychology Training Directors. During the two-year fellowship, the fellow will provide psychological services, attend and participate in educational programming, and conduct research under the supervision of staff psychologists. Fellows will have a primary major clinical concentration (rotation) and will have 4 minor clinical concentrations (rotations). A major concentration will extend over the two years of the fellowship (50% of clinical experience) and minor concentrations are typically of 6 months duration. Didactic opportunities will include conferences, seminars, small discussion groups, and one-on-one supervision. Psychiatry and Neurological Sciences offer regular Grand Rounds. Additionally, a seminar series will meet twice monthly for a didactic series, case conference, and/or journal club. During training, fellows will present research or a pertinent clinical topic at our department's seminar series. Research training will consist of 20% of the fellowship activities, and prospective or retrospective investigations in either basic science or clinical studies are possible. Fellows will have the opportunity to work with established clinical researchers on ongoing projects as well as develop independent research projects. Fellows are expected to generate at least one national presentation by the end of the fellowship, and highly encouraged toward one publication.

Program Description

Postdoctoral training is offered in adult (2 positions) and pediatric (1 position) neuropsychology. Emphasis is placed on professional development through teaching and research opportunities, advanced seminar work, intensive individual supervision, and inter-disciplinary collaboration. Each fellow negotiates with the training director for an individual program which balances these learning experiences. Interest in brain imaging technologies and their application to neuropsychology is encouraged; previous experience in these areas is not required. For more information, please see our website at: synapse.hitchcock.org.

Additional Information About Training Opportunities

Program Description

The Cognitive Behavioral Institute of Albuquerque, LLC has an immediate opening for one 24-month Full-Time Postdoctoral Fellow specializing in Cognitive and Behavioral Psychology. To qualify, candidates must have earned a Ph.D. from an APA accredited doctoral program in Clinical Psychology and must have completed an APA-accredited internship. Candidates may be considered for positions as Clinical Fellows prior to their dissertation defense. Successful candidates must demonstrate a primary career interest in providing evidence-based psychotherapy. Fellows typically engage in approximately 25 hours of direct client contact per week. The Postdoctoral Fellowship is designed to meet the supervised experience requirements for independent licensure in all states. The training program is also tailored to meet the specialization requirements for Board Certification in Cognitive and Behavioral Psychology, with potential sponsorship for certification by the Academy of Cognitive Therapy, the American Board of Cognitive and Behavioral Psychology, and the American Board of Professional Psychology (ABPP). Opportunities to earn more than \$50000 annually depend on the clinical services provided. The institute is committed to a high level of professional collegial support, therefore the successful candidate must demonstrate the ability and commitment to collaborate as a member of a highly supportive skill-building team. To apply for a position, simply forward a current copy of your CV to Bradford C. Richards, Ph.D., ABPP, Director and Supervising Psychologist, at br@cogtherapy.com. No cover letters or references are required during the first stage of application. All APPIC rules apply, however due to our particular staffing requirements we provide notifications of acceptance at times other than the suggested Uniform Notification Date. Candidates qualifying for further consideration will be contacted by the institute within four weeks of their CV submission.

	2008-2009	2009-2010	2010-2011
Still a postdoctoral fellow			1
Veterans Affairs Medical Center	4	4	1

Program Description

The postdoctoral residency at NMVAHCS supports 2 one-year residents in Clinical Psychology, PTSD emphasis; 2 one-year residents in Clinical Psychology, Interprofessional Health emphasis; and 2 two-year residents in Clinical Neuropsychology. The residencies focus on licensure during the post-doc and preparation for the ABPP in their respective fields. Residents can spend up to 20% of their time in research or program evaluation activities. NMVAHCS has an evidence-based focus for training, and is a scientist-practitioner program. We have national trainers in Prolonged Exposure, Cognitive Processing Therapy, ACT, and Motivational Interviewing on faculty. Residents can devise their own training plans and are encouraged to expand their professional repertoire to include administration, consultation, supervision, and program evaluation activities in addition to assessment, intervention, and research. Residents are prepared for eventual leadership positions within the profession. Specific research topics will be provided at the commencement of the training year. Please see link below for further information. www.libertyhealthcare.com/upload/113.pdf

Veterans Affairs Medical Center	2	2	1

Program Description

The Samuel S. Stratton VA Medical Center (VAMC) offers two trainees per year the opportunity to complete a postdoctoral residency in Clinical Psychology with emphasis in Post Traumatic Stress Disorder. The training year runs from September through August, and applications are invited from individuals who will have completed an APA accredited doctoral program in Counseling or Clinical Psychology and an APA accredited internship by the start of the training year. The residency is housed in the PTSD program of the Behavioral Health Clinic, and this program is the primary placement throughout the year. However, training is broad based and integrative, and residents also have opportunities to work in the the Chemical Dependence Rehabilitation Program, Inpatient Psychiatry, the Behavioral Health Recovery Center, Home Based Health Care and Community Based Outpatient Clinics. In addition, there is an emphasis on the

Additional Information About Training Opportunities**Program Description**

The two separate but integrated postdoctoral programs are briefly described below. See our brochure at www.northshorelij.com/NSLIJ/Psychology+Training+at+The+Zucker+Hillside+Hospital for a full description. The Clinical Geropsychology Fellowship offers placements in diverse settings where mental health services are provided to elderly people with a range of psychiatric difficulties, including psychotic, affective, anxiety, adjustment and personality disorders, as well as Alzheimer's disease and related dementing conditions. The Fellowship includes a didactic program of seminars, case conferences and opportunities for involvement in research. Clinical placements in the Geriatric Psychiatry Clinic, Geriatric Partial Hospital, psychological/neuropsychological assessment, and consultation to a nursing home, form the core of the Fellowship. The CLINICAL CHILD PSYCHOLOGY program is designed to further the education and skills

Still a postdoctoral fellow			2

Program Description

The Post-doctoral Fellowship in Clinical Neuropsychology and Rehabilitation Research is offered by the Brain Injury Research Center (BIRC) of the Icahn School of Medicine at Mount Sinai in New York, New York. Positions are funded primarily by grants focused on traumatic brain injury (TBI) from the National Institute on Disability and Rehabilitation Research (NIDRR) and the Centers for Disease Control (CDC). The fellowship has a long tradition that follows the scientist-practitioner model of training, with the goal of producing rehabilitation professionals with outstanding skills in clinical research on TBI as well as in clinical neuropsychology and rehabilitation psychology as applied to a variety of patient populations. Fellows spend approximately 80% of their time in research activities, working closely with a multidisciplinary team of accomplished TBI researchers at nearly every stage of the research process, from project conceptualization, execution, analysis, and dissemination. Fellows participate in existing research studies and complete one or more individual research projects under the mentorship of fellowship faculty. Fellows' research efforts are expected to culminate in presentation(s) at national conferences and completion of at least one first-author publication and/or submission of a grant application to support further research either during or beyond fellowship training. Current studies conducted at the BIRC include clinical trials of treatments for cognitive and affective sequelae of TBI (e.g. phototherapy, emotional regulation skills training) and longitudinal studies of outcomes following TBI (e.g. health status in the elderly, psychosocial functioning in college athletes). Training includes weekly research planning and progress meetings as well as seminars in quantitative and qualitative research methodology and in statistical methods. In addition, a wide variety of didactic seminars are available through the School of Medicine, the Medical Center, and collaborating institutions. Fellows spend approximately 20% of their time in direct clinical care activities, including comprehensive neuropsychological evaluations, cognitive remediation, and psychotherapy, under the supervision of one or more fellowship faculty members. Patients include those with traumatic and other acquired brain injuries, stroke, and dementia, with or without co-morbid mood/adjustment disorders. Training includes seminars in neuropsychological data interpretation, treatments for cognitive and affective sequelae of brain injury and neurological disease, and functional neuroanatomy. Fellows can also attend weekly brain cuttings and grand rounds offered by the Departments of Rehabilitation Medicine, Neurology, and Psychiatry. Fellows will also be involved in teaching and some supervision*within the Department of Rehabilitation Medicine's APA-approved rehabilitation neuropsychology psychology internship program.

Program Description

We are committed to the development of psychologist leaders who have sufficient breadth and depth of clinical knowledge to assume full responsibility for patient care, teaching, and administration of clinical programs in a variety of health care settings. Depending on the track selected and the professional goals of the applicant, trainees may also gain continued exposure to clinical research in a variety of areas. This year we will offer advanced education and training in the following substantive areas of clinical psychology. Child and Adolescent Psychology and Primary Care Family Psychology.

Program Description

The basis of the UCC postdoctoral training program is an apprenticeship model which promotes the independent practice of the fellow to competently perform in positions in which advanced level college mental health psychologists function. To this end, the fellowship is tailor-made to accomplish the following objectives: 1) Add to clinical competencies already established by rounding out training (e.g., increasing one's depth and breadth of brief treatment); 2) refine one's multicultural skills and sensitivity; 3) develop one's level of supervising and teaching; 4) begin to understand and perform administrative functions in which counseling center psychologists engage; and 5) develop outreach and consultation skills. Possibilities are numerous and are determined in conjunction with the director of training and postdoc coordinator. The fellow conducts individual, couples and group psychotherapy, receives 4 hours of supervision,

Additional Information About Training Opportunities**Program Description**

Cincinnati Children's Hospital Medical Center is one of the largest children's hospitals in the country with a reputation for excellence in clinical care, teaching, and research. Fellowships are available on a one- and two-year training cycle across several sub-specialties and offer a combination of training opportunities across research and clinical care. An apprenticeship model focused on active mentoring, career development, professional role identity, and development of skills in clinical research and care that ensures success as a scientist-practitioner, is a hallmark of the training program. Postdoctoral training focus areas include: 1) Behavioral Medicine a. Nutrition and Health (Meg H Zeller, Ph.D., Scott Powers, PhD, ABPP) b. Pain Management (Susmita Kashikar-Zuck, PhD) c. Adherence (Dennis Drotar, PhD), 2) Neuropsychology (Dean Beebe, PhD, ABPP) 3) Child Clinical/ADHD (Jeff Epstein, PhD) 4) Developmental Disabilities and Autism (Rebekah Ridgeway, PsyD) Training is specific to each focus area but is expected to take place in clinical care, research, teaching, administration, professional development, and community activities. Each program is developed within a focus area such that the fellow will be eligible for licensure at the end of the fellowship. For all areas, applicants must have a doctoral degree from an APA approved program, completed an APA approved internship, and defended their dissertation prior to beginning the fellowship. The majority of the positions are supported by NIH research grants, with 2 supported by NIH T32 postdoctoral Training Grants (Nutrition and Health, Adherence).

Additional Information About Training Opportunities

NCOD funds a research postdoctoral position for candidates with primary interests in organizational research. Researchers have access to all data related to job satisfaction, civility, H.R., performance measures, etc. available within VA and are part of the NCOD research team.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
Still a postdoctoral fellow			2
Veterans Affairs Medical Center	2	2	

Program Description

The VHA National Center for Organization Development (NCOD) offers a two-year postdoctoral fellowship in Organization Consulting and Development. There is one track for practitioners and a separate track for researchers. The Center serves VA facilities and offices nationwide. The Center's practice is based on an action research model; services include executive coaching, leadership development and assessment, team building, strategic planning, large and small group facilitation, survey design and analysis, change management consultation, and psychoeducation interventions. All fellows will be involved in the All Employee Survey of job satisfaction (administered annually to 250,000+ employees) and the CREW (Civility, Respect and Engagement in the Workplace) initiatives. The training program offers trainees the opportunity to "learn by doing" and they also participate in weekly didactic seminars based on readings from psychology and business sources and on work experiences in the field. The supervision model affords trainees the opportunity to learn from multiple senior practitioners. The Center's staff provides rich, intensive ongoing feedback. Trainees are expected to have a strong organizational and academic background and to display a high level of professionalism. The ability to work effectively as a member of a fast-paced, high performing team is essential. Practitioner trainees must be willing to travel frequently (at least two weeks per month). Trainees will accrue the clinical hours necessary for licensure in Ohio; candidates are encouraged to attain licensure by the end of the two-year training program. Candidates from doctoral programs in clinical, counseling, social, personality, experimental, school, or I/O psychology are encouraged to apply. Candidates must have completed all requirements for their doctorate, including dissertation defense, prior to the start of the postdoc. Postdoc begins in early to mid-September each year.

Still a postdoctoral fellow	1	2	1
Veterans Affairs Medical Center	1		
Private General Hospital	1	1	2

Program Description

The goal of this clinical health psychology fellowship is to provide clinical interventions with adult patients experiencing a wide range of medical and psychological problems. Primarily outpatient-based; includes consultations and diagnostic interviews, short-term psychotherapy, behavioral interventions, and group psychotherapy. We offer a 1 year certificate program in 1 major rotation area; however, our fellows often remain for 2 years of training. Current fellows may apply for 2nd year of fellowship in the same or different area of major rotation specialty upon goodness of fit/mutual consent. Our 3 Major Rotation Clinics include: Headache, Multiple Sclerosis, and Biofeedback for Chronic Disease. Minor rotations are assigned based on goodness of fit and availability: Primary Care /Family and Marital Therapy, Sleep Disorders/Insomnia Clinic, Bariatrics Clinic, research in Chronic Pain/Headache, MS, Biofeedback and chronic disease, and medical school teaching. The fellowship is clinical in nature, but participation in ongoing research, poster presentations, didactics, and teaching will occur.

Application Instructions: Interested applicants should e-mail application materials to our department secretary at pezdirc@ccf.org between October 1, 2013 and January 3, 2014. Please include the following: CV and a letter of interest/intent which specifies one or more of the 3 major rotations for which the applicant would like to be considered. Also include a clinical work sample and the names of 3 references who will be writing recommendation letters on your behalf (NOTE: these 3 letters of recommendation must be emailed or mailed by their authors). We require hard copies of the applicant's official graduate transcript and a letter from the graduate school program director attesting to the applicant's status as a doctoral candidate (NOTE: this includes the expected dissertation defense date and verification of applicant's anticipated graduation prior to the anticipated September 2, 2014 start date of postdoctoral fellowship). All application materials must be received by the deadline and before an applicant will be considered for invitation to our interview day. (NOTE: APA graduate program is required; APA approved health psychology internship strongly preferred). Applicants selected for interviews will be contacted via e-mail in late January/early February. Any questions should be directed to: Ms. Anne Pezdirc at pezdirc@ccf.org or (216)445-1319. Note: In years when there is a UND we adhere to their hiring practices.

Additional Information About Training Opportunities

Program Description

NOT UPDATED RECENTLY. CONTACT PROGRAM FOR INFORMATION.The LSCDVAMC offers one year, full-time APA accredited Postdoctoral Residencies in Clinical Psychology in seven separate emphasis areas: (1) Geropsychology (geriatric health psychology emphasis). (2) Psychosocial Rehabilitation of the Seriously Mentally Ill (Recovery Model emphasis). (3) Primary Care/Mental Health Integration. (4) PTSD. (5) Consultation to Specialty Medical Clinics. (6) Substance Abuse. (7) Rehabilitation Psychology. The Clinical Psychology Residencies follow a practitioner-scholar training model, providing training for advanced competence in these areas. We also have a separate, two-year, full-time APA Accredited Postdoctoral Residency in Clinical Neuropsychology which follows a scientist-practitioner training model (one position for 2012-2013). All Residencies require completion of a scholarly project. Applicants to all Residencies must be graduates of an APA accredited program in clinical or counseling psychology and have successfully completed an APA accredited internship. The successful candidates will have to pass a physical exam, background security check, and possible random drug screen (all routine) prior to final appointment. An oath of office is required.

Program Description

Our postdoctoral fellowship in clinical neuropsychology is at the University of Toledo Medical Center (UTMC). Primary clinical and research activities are conducted at UTMC, a hospital in Toledo, Ohio that is a Level 1 Trauma Center and the only area hospital that is a designated Primary Stroke Center. UTMC also has a 22-bed rehabilitation hospital (The Coghlin Rehabilitation Hospital) that provides rehabilitation services for traumatic brain injury, stroke, and spinal cord injury. UTMC has been accredited by CARF.

The University of Toledo has two campuses: the Health Science Campus, which includes UTMC and also offers academic programs for physicians, nurses, and physician's assistants; and; and the Main Campus, which offers a variety of academic programs including a doctoral programs in Clinical Psychology, Occupational Therapy, and Physical Therapy and a graduate program in Speech Therapy.

The fellowship is administered through Rehabilitation Services of UTMC. UTMC provides the financial support for the fellowship. The fellow's formal appointment is as a postdoctoral fellow at UTMC.

Program Description

The primary goal of the Postdoctoral Fellowship Program in Clinical Psychology is to help fellows develop the clinical and research skills necessary to work competently with diverse pediatric populations and to obtain a position in a pediatric healthcare setting or university-based training program. A variety of clinical, research and didactic experiences are provided, allowing fellows to benefit from placement at a leading children's medical center. In addition to supervised training experiences, fellows may have opportunities to supervise interns, externs and practicum students and to collaborate in multidisciplinary forums (case-centered consultations, research activities). Research is a highly-valued component of the fellowship experience, and all fellows integrate research goals into their overall plan for the fellowship.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
Community Mental Health Center		1	
University Counseling Center	1	1	1

Program Description

The purpose of the residency is to engage the resident in all aspects of University Counseling Center service to prepare for independent work as a licensed psychologist and to be a highly competitive candidate for UCC positions. The core of the resident's training includes individual and group counseling with undergraduate and graduate students, on-call crisis services, individual supervision, and consultation/outreach. After orientation, residents begin to build a caseload of individual clients, most of whom are seen every other week, due to the high demand for UCC services. Two hours of individual supervision, a weekly staff meeting, and postdoc seminar are scheduled each week. The UCC mainly provides brief treatment, but residents have the option of working long-term with several clients. Residents co-lead weekly group therapy with a doctoral student and provide supervision to that student. Training is also provided in collaborative assessment. As residents become more comfortable and familiar with the center and the university, they are asked to take on more responsibilities. On-call duty is assigned on a rotating basis (an average of once every six weeks). They participate in university functions as a representative of the Counseling Center. Residents are formally evaluated on a quarterly basis. In the event of a grievance, due process is followed and grievance procedures are in place to facilitate a fair resolution. The residency consists of 1800 hours of supervised professional psychological activities, and it meets the postdoctoral supervised experience requirements for licensure in Pennsylvania.

	2008-2009	2009-2010	2010-2011
Veterans Affairs Medical Center	3	2	3
Other Medical Center		1	

Program Description

We have 2 fellowship programs: Clinical Psychology and a specialized program in Professional Geropsychology. Our program in clinical psychology is APA accredited and has 3 tracks: Interprofessional Care (1 slot), PTSD (1 slot), Substance Use Disorders (1 slot). The fellow in the Interprofessional Care track works primarily with the PACT teams in Primary Care to develop expertise in collaborating with and providing care within an integrated care model. This fellow may select from several elective experiences emphasizing integrated care to complement the training within primary care. The fellow in the PTSD track works with the interdisciplinary Combat Stress Recovery clinical team for the year. The fellow completes diagnostic evaluations and provides empirically-based individual and group psychotherapy for combat-related PTSD. The fellow also has the opportunity to choose one or more training electives, such as Military Sexual Trauma or Substance Use Disorders. The fellow in the SUD track works with the interdisciplinary team in the Center for the Treatment of Addictive Disorders for the year and has the opportunity to provide diagnostic evaluation and individual/group psychotherapy in the CORE program, recovery and aftercare clinic, and opioid substitution clinic. The specialized program in Professional Geropsychology (2 slots) is NOT currently APA accredited, although the self-study for initial accreditation will be submitted in 1/2014 and it is anticipated that a site visit for accreditation will occur in summer 2014. Fellows in the geropsychology program complete two 6-month rotations. On the Neurobehavioral rotation, fellows conduct comprehensive neuropsychological assessments, provide consultation to the nursing home, and co-facilitate a memory skills group. On the GRECC rotation, fellows work with the home based primary care team to provide individual/couples psychotherapy, caregiver stress interventions, and cognitive screening in patients' homes. The fellow on this rotation also conducts brief cognitive screenings in the outpatient geriatric specialty clinics (GEM clinic and Driving Safety Clinic). All fellows participate in the weekly postdoctoral fellowship didactic series which includes a case conference, journal club, professional development seminar, and topic seminar, in addition to other track-specific didactics. All fellows also receive training in supervision through didactics and opportunity to supervise doctoral interns.

Program Description

The VA Caribbean offers a Postdoctoral Fellowship program in Clinical Psychology with two possible areas of emphasis: Women's Integrative Mental Health Services and Interprofessional Primary Care Mental Health Services. Prospective applicants may apply to one or both emphasis areas of the Fellowship.

The Women's Integrative Mental Health Services Fellowship Program follows the VA Health Initiative that underscores the importance of ensuring that women veterans' gender-specific health care needs are attended to. We aim at developing psychology professionals beyond traditional lines, who can integrate and develop expertise related to gender-specific and cultural diversity issues and support the development of a cultural and gender sensitive approach to psychotherapy. The two Fellows training in this program service female veterans from the Women's Clinic (primary care), Mental Health Clinic, and Trauma Center.

The Patient Aligned Care Teams/Primary Care Mental Health Fellowship places emphasis on an interdisciplinary approach to detect and address the behavioral health needs among primary care patients, with the purpose of early identification, prevention of illness and health promotion thus supporting patient's capacity for increased functionality. This model is one of collaboration between primary health, mental health and the patient that has proven to be highly effective in achieving behavior change and self agency in patients. The two Fellows in this emphasis area become part of an interdisciplinary setting embedded within the Patient Aligned Care Teams (PACT).

Program Description

The Clinical Psychology Training Consortium offers three types of fellowships, hospital-based Investigator-funded clinical/research fellowships, APA-accredited clinical fellowships, and Institutional NIH-funded T32 research fellowships.

The purpose of the Investigator-funded clinical/research fellowships and APA-accredited fellowships is to provide a training experience that ensures the development of competency in a specific area of clinical psychology including: Adult, Child, Health Psychology/Behavioral Medicine, and Neuropsychology.

Clinical/research fellowships range from 20%-100% research time. The exact nature of training (e.g., didactic experiences, percentage of direct patient care, exposure to ongoing faculty research, direct research involvement of the fellow) is decided on an individual basis by the fellow and his/her primary faculty mentor. The clinical experiences vary greatly depending on patient populations and hospital settings. Clinically focused fellowships are APA-accredited.

NIH-funded T32 research fellowships include: NIMH Research Training in Child Mental Health; NIMH Research Training in Child/Adolescent Biobehavioral HIV; and NHLBI Training in Cardiovascular Behavioral Medicine. Training objectives are achieved through an apprenticeship model where the fellow works closely with a faculty member in the provision of clinical services and/or in conducting research. The faculty member serves as primary supervisor and role model, and the close supervisory relationship permits the fellow to develop clinical and/or research skills as well as role identity. In most fellowships, there are typically at least 2 other supervisors directly involved with the fellow. Number and type of fellowships vary from year-to-year and most are 2 years in duration.

Start dates vary from July 1 to September 1.

Military Medical Center		1	

Program Description

TRAINING MODEL We will provide training consistent with the Practitioner-Scholar model. We will strive to provide each postdoctoral resident with advanced clinical training, with an emphasis on consultation and behavioral health. There will be an emphasis in our program on the clinical, consultation and behavioral health skills needed to provide patient centered care as part of a multidisciplinary team. Multidisciplinary teams in PACT/Behavioral Health will include primary care doctors, nurse practitioners, pharmacologists, psychiatrists, psychologists, social workers, and administrative staff. Our resident will have the opportunity to train with other students and developing professionals from varying disciplines including but not limited to: primary care and psychiatry residents and nursing students of varying levels. Training Experiences The postdoctoral resident will learn and refine a wide range of clinical, consultation, behavioral health, assessment, and psychological professional skills throughout their postdoctoral resident year. The resident will spend at least 25 hours (62.5% of work time) a week providing direct clinical services including psychotherapy and assessment services to veterans. Currently, there are eighteen doctoral level psychologist positions through the Dorn VAMC, several of them assigned to two of our Community Based Outpatient Clinics. The psychologists have interests and expertise in PTSD, substance abuse, primary care psychology, health psychology, assessment, military sexual trauma, neuropsychology, end of life issues, geropsychology, and serious mental illness. Psychology staff come from diverse academic backgrounds and ascribe to a range of theoretical orientations including cognitive behavioral, psychodynamic, experiential, interpersonal, existential, and gestalt. We will be having three predoctoral psychology interns, so the resident will also have opportunities to engage with and help mentor these interns.

Additional Information About Training Opportunities

Program Description

Our program's training emphasis involves child and adolescent populations served primarily in an outpatient setting. Areas of training include Pediatrics (provision of psychological services to infants, children and adolescents experiencing comorbid psychological and medical problems), Autism and Developmental Disabilities (this concentration is integrated into the Children's Hospital Autism Program), Complex Medical/Neuropsychological, ADHD and School Problems. Our training program is a LEND (Leadership Education in Neurodevelopmental and Related Disabilities) training site. The South Carolina LEND program is a state-wide interdisciplinary program established to improve the health of infants, children and adolescents with autism spectrum disorders (ASD) and neurodevelopmental disorders (ND). LEND trainees will participate in clinical training, didactics and leadership training. The training program adheres to a developmental training model, wherein trainees skills are assessed at the beginning of the training process, trainees are observed closely while their skills in evaluation and intervention grow, and trainees gradually move towards more independent practice as their level of proficiency warrants and under the close, supportive supervision of staff and faculty. The program has been designed to achieve an integration of clinical, academic, scientific, and professional training, and aims to strengthen and refine the trainee's knowledge and application of established and empirically-based assessment and intervention techniques. The faculty and training staff consist of licensed, doctoral level Psychologists and Neuropsychologists on staff within the Division of Psychology and Developmental-Behavioral Pediatrics and/or the Pediatric Hematology/Oncology Center and holding professorships in Clinical Pediatrics at the University of South Carolina School of Medicine.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
Still a postdoctoral fellow	1	1	1
Community Mental Health Center		1	1

Program Description

Our program offers two postdoctoral fellowships: in Developmental Disabilities and in Child Welfare and Trauma-Informed Care. Fellows in the Developmental Disabilities program will complete one year (2000 hours) of supervised and advanced training in child assessment, evidence-based treatments (Applied Behavioral Analysis), research, and interdisciplinary team approaches in the field of Developmental Disabilities. Additional responsibilities will include supervision of psychology trainees, participation in didactic learning experiences, scholarly presentations, and possible program development. The fellowship will focus on services to children between the ages of 3 and 10 years, as well as their caregivers and families. Primary or secondary diagnoses typically include Autism Spectrum Disorders, Intellectual/Developmental Disabilities, and Disruptive Behavior Disorders, although services are also provided to children with internalizing disorders. The typical population served is diverse in ethnicity, socioeconomic status, and geographic location (e.g., urban and rural). The primary purpose of the fellowship in Child Welfare and Trauma-Informed Care is to provide in-depth training in the field of child welfare and child maltreatment. Fellows will gain competencies in the areas of assessment, treatment, and multidisciplinary collaboration around issues related to child abuse and neglect. Additionally, fellows will participate in the dissemination of evidence-based, trauma-informed interventions into the multiple systems commonly responsible for the care of youth in state custody. Responsibilities within this position include child evaluations surrounding trauma issues and developmental functioning, as well as assessment of a range of emotional and behavioral problems evidenced by children who have experienced abuse and neglect; consultation with caregivers, child welfare workers, teachers, and other service providers regarding effective interventions; supervision of psychology trainees; opportunities for program development and evaluation; participation in didactic learning experiences and scholarly presentations; opportunities for providing evidence-based treatment, such as TF-CBT, PCIT, and treatment for Children with Sexual Behavior Problems. The typical population served is diverse in ethnicity/race and geographic location (e.g., urban and rural).

University Teaching Faculty	2		

Program Description

The purpose of the fellowship program is to refine the skills of the scientist-practitioner preparing for a career in an academic pediatric medical setting with primary emphasis in pediatric oncology, Sickle Cell Disease, and/or pediatric/adolescent HIV. As SJCRH is a non-profit specialty children's cancer hospital, training in general pediatrics is not available. The fellow will be trained within a scientist-practitioner consultation-liaison model of service provision which fosters collaboration with a variety of pediatric subspecialties and medical treatment teams. While preference is toward applicants intending toward a career as a clinical investigator in pediatric psychology, potential fellows may be considered for a primary clinical track (1 year), primary research track (2 years), or combined clinical/research track (2 years). Please indicate intention/preference in online application and supplemental materials requested.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
Still a postdoctoral fellow			2

Program Description

Note: Application deadline for Neuropsychology positions is 1/1/14; applications for the three other emphasis areas will be reviewed on a rolling basis beginning 1/15/14.

The fellowship program at the Memphis VAMC is currently accredited as a Clinical Psychology Fellowship offering training in four emphasis areas in the upcoming training year: Neuropsychology (2 positions), Medical/Health Psychology (2 positions), PTSD (1 position), and Returning Veterans/Polytrauma (1 position). An updated description of the postdoctoral fellowship program will be available in October at www.psychologytraining.va.gov/memphis/.

The Psychology Training Program has applied for specialty accreditation in Clinical Neuropsychology and Clinical Health Psychology.

Additional Information About Training Opportunities

Program Description

The post-doctoral psychology program offers 4 positions and provides intensive supervised training in clinical psychology with an emphasis in Substance Abuse (2 positions), Patient Aligned Care Teams (PACT/Medical Psychology) (1 position), and Geropsychology (1 position). Postdoctoral psychology residents in the Substance Abuse emphasis area address problems with chemical dependency as members of interdisciplinary teams. They combine psychological assessment with individual and group psychotherapy to conceptualize the psychosocial needs of the substance-abusing Veteran, and facilitate the patients' development of coping strategies without the use of substances. These residents also actively participate in all interdisciplinary treatment team meetings. In the PACT area, the resident participates in the education of primary care providers and in the provision of care to patients, provides education and therapy to medical patients, and therapy to mental health patients. In the Geropsychology area, the resident spends half of the year on an interdisciplinary mental health team and half of the year in a rehabilitation-oriented care unit which includes a palliative care and hospice section. Also, he/she will have exposure to home-based primary care and will work with some mental health patients. A minimum of 2 hours per week of individual supervision with a licensed psychologist is provided, and the resident will attend training seminars and case conferences throughout the year. Applicants must have received a doctoral degree in clinical or counseling psychology and a completed a predoctoral internship, both accredited by the American Psychological Association. Discrimination in selection because of race, color, religion, sex, sexual orientation, age, national origin, or disability is

Additional Information About Training Opportunities

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
Still a postdoctoral fellow			6
Other Medical Center	5		

Program Description

The Postdoctoral Fellowship in Clinical Child Psychology at Children's Medical Center Dallas provides training in clinical child psychology through the incorporation of specialized experiences in eating disorders, outpatient psychology, autism spectrum disorders, and pediatric health psychology in the pediatric setting. Fellows are trained as practitioner-scholars through a focus on direct clinical care and evidence-based practice. These skills are developed through multidisciplinary experiences in assessment, intervention, and consultation, including individual and group supervision, didactics, and a postdoctoral seminar. Supervision follows a developmental model. Multicultural competence and ethical practice are integral components of all areas of training. At the completion of the training year, fellows will be prepared for licensure and independent practice with children and adolescents and their families.

Applicants apply to one of the program's concentration area and spend their fellowship year working in that concentration area:

- Eating Disorders
- Outpatient Psychology
- Autism Spectrum Disorders
- Pediatric Health Psychology

Eating Disorders

This concentration offers fellows specialized experience with the evaluation and treatment of eating disorders. Specifically, fellows conduct individual therapy and group therapy with patients who have a wide variety of eating disorders and general psychiatric disorders. There are also opportunities to hone assessment skills by administering psychological tests. Fellows participate in the multi-disciplinary treatment team, and collaborate with attending psychiatrists, psychiatry fellows, family therapists and other unit staff in their work with patients. Fellows carry an inpatient therapy caseload, attend multidisciplinary rounds, lead groups, and consult with patients' support systems outside the hospital to coordinate services.

Outpatient Psychology

The outpatient psychology concentration offers the postdoctoral fellow clinical experience with a broad range of patients presenting with behavioral, learning, thought, and anxiety/mood disorders. In addition, the fellow will receive specialized training in early childhood diagnostic assessment with a multidisciplinary team, collaborative therapeutic assessment and therapeutic intervention programs for patients and their families. The fellow will work closely with the clinical team, which includes psychiatry, neuropsychology, psychology, speech language pathology, occupational therapy, applied behavior analysis, case management, neurology, genetics, and pediatrics. Approximately 50% of the position will focus on treatment and intervention, while the other 50% will focus on assessment.

A second outpatient psychology fellow will focus on suicide and mood disorders through work in a multidisciplinary suicide intensive outpatient program.

Autism Spectrum Disorders

The fellow in the Autism Spectrum Disorders Concentration will receive specialized training in assessment and intervention with children on the autism spectrum through participation in multidisciplinary diagnostic evaluation, weekly case conferences, and therapeutic intervention programs for patients ages 1-18 years and their families.

Pediatric Health Psychology

Fellows in the Pediatric Health Psychology concentration work with a variety of patients with chronic and acute medical diagnoses. Fellows participate in consult rounds and collaborate on patient care with psychiatry fellows and attendings, play therapists, other psychology trainees, and psychologists. They evaluate how a child is functioning in the context of a medical condition, conduct both short-term and long-term interventions, and consult with other staff and the medical team.

All fellows participate in providing consultation/liaison services throughout the training year. Additionally, fellows choose core and elective rotations in which they receive more specialized training with particular patient populations. The training year is divided into 3 four-month blocks of time. During each four-month block, fellows provide consultation/liaison services and choose 2-3 clinical rotations of interest. Over the course of the year, fellows typically gain experience in 5-6 different areas of clinical service.

Supervision

Each fellow receives of minimum of two hours of individual, scheduled, face-to-face supervision each week, plus an additional two hours of structured learning activities (e.g., didactics, seminars, group supervision).

Didactics

Fellows attend didactic presentations, group supervision/journal club, and postdoc seminar each week. Didactic presentations cover a wide range of topics relevant to clinical child psychology. Postdoc seminar includes a supervision series and topics related to EPPP, licensure, and the progression to independent practice.

APA Accreditation Status

The Postdoctoral Fellowship Training Program in Clinical Child Psychology is accredited by the American Psychological Association (APA). The contact information for the Office of Program Consultation & Accreditation at APA is:

Private Psychiatric Hospital	1		1
University Teaching Faculty	1		

Program Description

This one-year postdoctoral training program is based in a private psychiatric hospital which is well-known for high quality patient care. The theoretical orientation is broadly psychodynamic, but with opportunities for cognitive-behavioral and other empirically-based approaches. The educational mission of Menninger is to train promising young clinicians in advanced concepts of psychotherapy and psychological testing. Postdoctoral fellows work with a multidisciplinary team in a fully integrated, biopsychosocial model. The postdoctoral fellow is responsible for coordinating patient care, administering and interpreting psychological tests, providing individual and group therapy. Patient treatment episodes range from approximately 2 weeks to 6-8 weeks, affording an opportunity for intensive psychotherapeutic interventions and complex diagnostic work. Clinical supervision of 2-3 hours per week and didactic training round out the training experience. The program is affiliated with the Baylor College of Medicine.

Program Description

The Clinical Psychology Fellowship program is composed of a total of five post-doctoral positions. All of the positions provide 1-year of training in clinical psychology with an emphasis in Trauma and Related Anxiety Disorders (2 positions), Serious Mental Illness (2 positions), and Primary Care Mental Health Integration (1 position). Fellows in the postdoctoral training program devote 80% time to clinical service delivery skills and 20% to research. The Clinical Fellowship program is APA accredited. The Psychology Postdoctoral Program also offers training in the specialty area of Neuropsychology, which follows Division 40 and APCN standards. Robert L. Collins, Ph.D., ABPP directs this program. Neuropsychology fellows devote 80% time to clinical service delivery and 20% to research. The Neuropsychology program provides two years of specialty training. We have 2 positions and will be seeking applications for the fall of 2014. The Neuropsychology Specialty Fellowship is APA accredited.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
University Teaching Faculty	1		

Program Description

Ben Taub General Hospital is a county-funded general hospital that serves the needs of Houston/Harris County residents and is staffed by Baylor College of Medicine professionals. The Mental Health Service provides inpatient and outpatient services for medically indigent and psychiatrically impaired persons. The Postdoctoral Fellow provides assessment and therapy services to psychiatric outpatients and assessment and consultation service to medical inpatients through the Consultation and Liaison Service, participates in ongoing research protocols, and initiates research protocols. The Fellow serves as a primary clinician in the Intensive Outpatient Program, a multi-disciplinary program for patients with DSM Axis I and Axis II disorders; provides individual and/or group psychotherapy to children, adolescents, and adults; and conducts psychological and neuropsychological evaluations while training practicum students. Psychologists and psychiatrists on the Baylor faculty provide supervision for the clinical work and research activities pursued by the Fellow. All the educational opportunities of Baylor College of Medicine and the Texas Medical Center are available, including Grand Rounds, workshops, and scheduled training activities. The Fellow is expected to develop a research project for presentation or publication, provide lectures appropriate for the training of medical students and psychiatry interns and residents, and participate in training activities of the Service for psychiatry residents, medical students, and other professionals in training at Ben Taub General Hospital. The Fellowship meets the licensure requirements for the State of Texas, and the Fellow is encouraged to pursue licensure in Texas during the year.

Additional Information About Training Opportunities
Program Description

The United States Air Force offers two-year Postdoctoral Fellowship positions in Clinical Health Psychology (CHP) to qualified psychologists. The positions are located in San Antonio, Texas, at Wilford Hall Ambulatory Surgical Center (WHASC), the largest outpatient surgical center in the Department of Defense. WHASC is a teaching hospital with 43 medical specialty and allied health training programs. The fellowship is a comprehensive program of supervised clinical training, teaching, supervision, and research in the specialty area of CHP. The treatment programs include working as part of multidisciplinary/interdisciplinary teams including the following programs: Pain Management, Diabetes Education, Tobacco Cessation, Cardiac/Pulmonary Rehabilitation, and the Sleep Center. Fellows also gain experience as behavioral health consultants in Obstetrics. The education program consists of weekly workshops, professional seminars in CHP, Distinguished Visiting Professor Program, and attendance at one national psychology conference. Fellows participate in active research protocols and are expected to produce professional papers for submission to peer-reviewed journals or presentation at a national conference. Fellows also gain experience in grant writing. During the second year, fellows receive training in population health-level program management as well as neuropsychology assessment. In recent years most fellows have been selected from those already on active duty as a licensed Air Force clinical psychologist with several years of professional experience. Highly qualified civilian applicants with similar credentials will be considered for acceptance into the fellowship training program. The program usually accepts applicants who are licensed psychologists with one or more years experience beyond completion of their psychology internship program. The application due date is approximately 7 months prior to the start date of the fellowship program.

Additional Information About Training Opportunities

Program Description

The Deer Oaks Mental Health Associates Postdoctoral Psychology Residency Program designed to provide the highest quality advanced, gero-psychology training for outpatient services billed in an inpatient nursing facility, psychiatric residential treatment facility or other inpatient setting. Our trainees are exposed to the full range of clinical services including individual, family and group psychotherapy with adults and seniors. In addition, assessment and psychological/neuropsychological testing observation and preparation offers the resident an opportunity to become quite competent in performing and interpreting a wide spectrum of psychological and neuropsychological instruments. Opportunities for continued employment/advancement after program completion. Training locations include San Antonio, Dallas, Ft. Worth, Victoria and Houston, Texas. Some travel is expected as needed to commute between nursing home sites. The organization is more than 17 years old and growing, with many opportunities for leadership in the areas of Gero-Psychological Services. Contact Training Director or Recruiting Department for more details at 7272 Wurzbach Rd., Suite 601, San Antonio, TX 78240.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
Veterans Affairs Medical Center	2	4	3

Program Description

We offer scientist-practitioner training in applied clinical psychology in a VA medical center setting affiliated with the medical school UTHSCSA. Currently, there are five Clinical Psychology Residency positions with emphasis areas in the following: Primary Care/Health Psychology, Trauma, Palliative Care (2 slots) and Rural Mental Health located in Kerrville. We typically select residents from our own internship class (from those in analogous special-focus areas). To be selected, our interns must have collected all of their dissertation data, be progressing satisfactorily in their internship, and be approved by their preceptor and Training Committee (all by December 1st of their internship year). These in-house selections are made by December 15th to allow time for open recruitment for any unfilled postdoctoral positions.

	Where Did Former Postdoctoral Fellows Go?		
	2008-2009	2009-2010	2010-2011
Still a postdoctoral fellow			1

Program Description

Applications are currently being accepted for the VISN 19 MIRECC VA Advanced Fellowship Program in Mental Illness Research and Treatment, which is housed at the Salt Lake City MIRECC. This is a two-year position commencing in the summer or fall of 2014. Programmatic emphasis is on the brain and behavior as they relate to suicide and serious psychiatric disorders.

The mission of the VISN 19 MIRECC is to study suicide with the goal of reducing suicidality in the veteran population. To carry out this mission, members of the VISN 19 MIRECC: 1) focus on cognitive and neurobiological underpinnings that may contribute to suicidality; 2) develop evidence-based educational and clinical materials to identify and optimally treat veterans who are suicidal; 3) provide consultation regarding assessment and treatment planning for highly suicidal veterans; 4) mentor researchers in the area of suicidology; and 5) collaborate provides 2-3 hours of supervision to advanced graduate students, offers consultation and outreach services to the university community, performs administrative functions (e.g., administrative evaluations, mandated assessments), co-teaches a clinical issues seminar to practicum students, and attends selected case-oriented seminars.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
Still a postdoctoral fellow			1
Veterans Affairs Medical Center	2	2	
Private General Hospital			1

Program Description

The Salt Lake City VA Healthcare System Psychology Postdoctoral Program in Clinical Psychology was granted initial accreditation in 2012. The Clinical Psychology Postdoctoral Program has two areas of emphasis: PTSD (PCT Team/Polytrauma/OEF, OIF, & OND Veterans) and Behavioral Health/Primary Care. The PTSD Track offers two fellowship positions and has a focus on PTSD, Polytrauma, and readjustment strains for OEF/OIF/OND veterans. This track has been in place since 2008 and was recently granted initial accreditation by American Psychological Association. Residents typically split their time in the PTSD Clinic and the Polytrauma Clinic where they learn various times assessments and train in advanced interventions for those with TBI histories as well as PTSD. The program aims to train the next generation of psychologists to work in VA healthcare. The Behavioral Health/Primary Care (BH/PC) track is newly developed for the 2013-2014 training year and will provide three fellowship positions. Two of the residents will provide interprofessional primary care/behavioral health and one of the residents will provide interprofessional primary care/behavioral health to geriatric patients. The BH/PC fellowship will share many of the same supervisors, settings, and training experiences in which fellows will provide clinical care. Additional areas of emphasis include rural populations, program evaluation and development, and will also allow for the fellow to develop their own specific interests. All three residents will provide care across a range of settings which may include: health promotion and prevention, inpatient mental health consult, primary care, home-based primary care, and geriatric clinics.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
Veterans Affairs Medical Center	1	1	

Program Description

The primary goal of the psychology postdoctoral fellowship program is to prepare early-career professionals in the ethical practice of clinical psychology in Primary Care, a variety of other settings, and to serve as a leader in the integration of mental and physical health care. Our postdoctoral fellowships graduates are well prepared to begin working in a diverse number of environments including primary care settings, outpatient clinics, and medical center-based care.

The postdoctoral fellowship is composed of a number of core experiences, most of which occur simultaneously throughout the year. These experiences include a rotation in the Primary Mental Health Clinic (located in the Primary Care Service), Primary Care/Mental Health Integration, Specialty Care Medicine (oncology, pain service, and diabetes share medical visit team), a year-long rotation in Specialty Mental Health Clinic (outpatient mental health clinic), and serving on both the Clinical and Preventive Ethics Committees along with top hospital administration. Fellow will also develop and implement a quality improvement project in conjunction with a supervisor.

Postdoctoral fellows engage in varied activities during the course of a work week which approximates the schedules of staff members. A typical day for a fellow includes seeing outpatients in Primary Care and/or Specialty Care Medicine Clinics and Specialized Mental Health care, collaborating with medical providers, attending a seminar/case conference or journal club, receiving supervision and providing health psychology supervision to psychology interns. Fellows also attend weekly staff meetings, are members of the internship training committee, and participate in multidisciplinary treatment and ethics teams. Fellows typically work a forty-five hour week and are expected to complete reading and other assignments for seminars/journal clubs outside of this time.

Postdoctoral fellows receive a minimum of three hours of supervision per week as well as one hour of group supervision in the Clinical Case Conference. Fellows also attend several seminars focused on professional development, supervision and diversity.

Program Description

The mission and objective of the VAMC Hampton Postdoctoral Training Program in Women's Mental Health and Trauma is to train psychologists to provide quality mental health care and evidenced-based/empirically-supported treatment to women Veterans. The primary goal of the postdoctoral program is for fellows to develop a full range of skills required for independent functioning as a psychologist within the area of women's mental health. Within this goal, we are committed to the scholar-practitioner model of training; fellows are expected to utilize current literature on empirically supported assessment and treatment in planning and delivering services. This approach is consistent with the strong multidisciplinary, evidenced-based training culture at VAMC Hampton.

Complementing our goal of preparing fellows to function as independent psychologists within the area of women's mental health, we also aim to prepare fellows for practice in priority areas of mental health care for women Veterans. The Psychology Postdoctoral Training Program in Women's Mental Health and Trauma emphasizes Evidenced Based and Empirically Supported approaches in assessment and treatment of Axis I disorders, integrating mental health care into the Patient Aligned Care Team, and providing education to VAMC Hampton staff about the unique health needs of women. Emphasis is placed on training fellows in Evidenced Based and Empirically Supported Psychotherapies, including CPT, MI, CBT for depression, DBT, and PE. Through the variety of professional activities, fellows receive training that facilitates their development of core competencies.

The Psychology Postdoctoral Training Program in Women's Mental Health and Trauma philosophy is based on a scholar-practitioner model with an emphasis on training in the area of applied clinical practice. It is designed to assist fellows in developing a full range of skills required to function as independent, ethical, and competent professional psychologists within the area of women's mental health. Thus, our philosophy is to implement and promote established, reliable, valid and efficacious treatment modalities and protocols to the greatest extent possible and to encourage actively our fellows to draw upon the empirical body of literature to enhance the development of their professional skills over time. As scholar-practitioners, we remain abreast of current empirical findings in our chosen areas of professional practice and further our knowledge of treatment advances in order to inform clinical decisions.

The program provides ample opportunity to work with a culturally and ethnically diverse female Veteran population in collaboration with a body of practicing psychologists who represent a wide variety of theoretical bases, clinical interests, and professional expertise. Fellows are exposed to a broad array of clinical conditions, situations and scientifically informed learning and educational experiences over the entire course of their postdoctoral-training year. The emphasis on treating women Veterans allows fellows to develop advanced knowledge in this area. Enhancement and strengthening of professional attitudes, responsibility, communications skills, and critical judgment are also integral parts of this training program.

Program Description

The primary goal of the VA Advanced Fellowship Program in Mental Illness Research and Treatment is to train physicians, psychologists, and other allied health professionals to become outstanding clinical researchers in high priority areas of VA mental health. The Richmond VAMC's MIRECC Advanced Fellowship is designed to support the development of clinician-researchers in the area of post-deployment mental health, a high priority area within mental health. Fellows devote the majority of their time to patient-oriented research and 25% to direct patient clinical care. Additionally, the fellowship encompasses education and administrative experiences that support the Fellow's professional goals. Please refer to the MIRECC Fellowship Brochure for additional details <http://www.psychologytraining.va.gov/richmond>.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
Still a postdoctoral fellow	1		1
Veterans Affairs Medical Center	2	4	2

Program Description

The Salem VAMC offers 4 full-time paid Postdoctoral Fellowship positions. One-year positions are offered in the emphasis areas of Posttraumatic Stress Disorder, Primary Care-Mental Health Integration and General Mental Health/Evidenced Based Practices. A two-year position is offered in Clinical Neuropsychology. The Scientist-Practitioner model guides our psychology training programs. In addition, we use a Developmental approach. The Neuropsychology fellow is exposed to training consistent with the Division 40 Houston Conference guidelines. Our ideal is that of a psychologist who is skilled in the understanding and application of clinical research and scientific methods to her/his practice. The majority of the clinical staff's primary theoretical orientation is Cognitive-Behavioral or Behavioral. Neuropsychology staffs' theoretical orientation tends to be Biopsychosocial. Fellows' time is spent in clinical and testing duties (50%); research and/or program development (20%); providing supervision (10%); interprofessional treatment team participation and consultation (10%); and teaching, leadership, and didactics activities (10%). A special focus of our fellowship is fostering the growth and integration of fellows' personal and professional identities. We emphasize the need for balance in our lives. This results in our insistence on a 40-hour work week and encouraging our fellows to pursue interests outside of psychology, such as recreation, exercise, family, and friendships. Professional identity development, especially in the areas of employment location and selection, is assisted by seminars about job searches, licensure, program development, mental health administration, and supervision. In addition, psychology staff are very open to providing informal assistance in these areas.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
Still a postdoctoral fellow			1
Veterans Affairs Medical Center			5

Program Description

Postdoctoral Fellowships are available with emphases in PTSD, substance abuse, integrated primary care, rehabilitation care, telehealth, Hepatitis C/HIV, and neurocognitive disorders. 1) Two positions in addictions care are offered through the Center of Excellence in Substance Abuse Treatment and Education (CESATE) - one of only two programs funded nationally by the Department of Veterans Affairs to offer a specialized clinical fellowship in the interdisciplinary approach to substance use disorders. The primary goal of this fellowship is to provide clinical training in the interdisciplinary assessment and treatment of substance abusers, intended to prepare fellows to assume clinical, academic and/or administrative positions in a variety of settings. 2) One first-year position in PTSD is available in the Mental Illness Research, Education and Clinical Center (MIRECC). This two-year fellowship has a research emphasis (75% research, 25% clinical time). The primary goal of this training is to prepare fellows for independent investigator status in VA Medical Center and academic settings, with expertise in trauma disorders. 3) Two positions are offered in Rehabilitation Care. Both are devoted primarily to the care of returning OIF/OEF veterans, sited in a variety of rehab medicine settings. These positions offer training in integrated care delivery and evidence-based treatment for PTSD and co-morbid disorders, or alternatively, in evidence-based assessment and intervention of physical trauma and traumatic brain injury. 4) One position is available in each of four additional areas: Primary Care, Neurocognitive disorders, HCV/HIV, and Telehealth. Applicants for all positions must be US citizens, and must have completed a doctoral degree from an APA accredited graduate program and an APA accredited internship prior to the start of the fellowship. Inquiries should be directed to Steve McCutcheon, PhD, at the above address.

Where Did Former Postdoctoral Fellows Go?

	2008-2009	2009-2010	2010-2011
State/County/Other Public Hospital	1	1	1
Correctional Facility	1		

Program Description

Western State Hospital (WSH) through the Washington Institute for Mental Illness Research and Training (WIMIRT), sponsors a postdoctoral fellowship in forensic clinical psychology. The yearlong fellowship runs from September 1 through August 31, full time. The goal of the fellowship is to produce clinical specialists in the practice and research of forensic clinical psychology who will lead the development of the field. The fellowship is structured in such a way as to prepare fellows for the ABPP examinations. The work site is typically at WSH, although there could be occasional forensic evaluations in local correctional facilities and other community locations, and possible evaluations in private practice settings. Duties include forensic pre-trial evaluations of criminal defendants; civil commitment assessment and evaluations; supervised report writing and testimony; independent study and research. Six full-time psychologists are available for supervision, training, and consultation. Four to six hours of face-to-face clinical supervision are provided each week. A demanding nine-month, weekly forensic seminar series provides further didactic education. Fellows will also be encouraged to participate in weekly psycholegal discussions facilitated by the fellowship director. WSH offers extensive collateral opportunities for education and training. The fellowship program also maintains an active, collegial relationship with the Seattle University School of Law. WSH has a long-standing and fully APA-approved pre-doctoral internship program, as well as a long-standing pre-doctoral practicum and pre-internship program.

Additional Information About Training Opportunities
Program Description

The Pediatric Psychology Post-Doctoral Fellowship at Madigan Army Medical Center is an APA Accredited intensive two-year training program in Clinical Child Psychology with an emphasis in Pediatric Psychology. The program accepts a new civilian fellow every two years and a new Active Duty Army fellow yearly. The next civilian fellow will be selected in 2013. The focus of the fellowship is the training and development of psychologists with an advanced level of competency in Clinical Child Psychology with an emphasis in Pediatric Psychology who can meet the specific research and service needs of children, adolescents, and families. The philosophy of the fellowship is based on a scientist-practitioner training model with the goal of training Clinical Child Psychologists who can conduct research and integrate research findings into clinical work at an advanced level of competency. The fellowship emphasizes the developmental and social contexts of child psychopathology and the use of empirically validated assessments and interventions. Fellows gain experience in diagnosis, assessment, and treatment of children with a wide range of medical, developmental, and psychological difficulties. Over the course of the two-year training experience, the curriculum is graduated and progressive such that fellows advance from exposure to experience and the development of expertise. The curriculum closely follows and is based on recommendations from the APA Division 53 Task Force on Postdoctoral Accreditation in Clinical Child Psychology and the APA Division 54 Task Force Report on Training Pediatric Psychologists. Fellows are also expected to participate in clinical research and produce a publishable research product during the fellowship. During the two-year training program, fellows will participate with a faculty member in a variety of multidisciplinary clinics and extensive didactic seminars. Fellows are expected to carry an outpatient therapy caseload during the fellowship.

Additional Information About Training Opportunities

Program Description

Training program is aimed at preparing post-doctoral fellows for a career within a medical setting. There are three tracks available, two focused on adult patients, and one on pediatric patients. Adult-track fellows will gain experience working in a university-based medical center and a federally-funded health center. The Pediatric-track fellow will gain experience working in a university-based children's hospital and its outpatient clinics. Activities involve assessment, intervention, and consultation to and participation on multidisciplinary treatment teams. Fellows will receive training in pre-surgical evaluation. They will serve patients on oncology, family practice, neurology, organ transplant, pulmonary, orthopedics, trauma and burn services, and palliative care. Fellows have the opportunity to receive training in supervision. Fellows also receive formal didactic training in areas related to health psychology. Fellows may engage in some project development, teaching, and/or research during the fellowship year.

Program Description

The Psychology Fellowship Program offers 1 position in each of 2 specialties: Pediatric Psychology and Child/Adolescent Clinical Psychology. The Pediatric Psychology Fellow is trained in the assessment and treatment of problems of children and adolescents with medical disorders. The Pediatric Fellow spends half of each week in supervised experience on the inpatient pediatric, pediatric intensive care and neonatal intensive care units of St. Joseph's Childrens Hospital and the other half in the outpatient Department of Psychiatry and Behavioral Health. The Child/Adolescent Psychology Fellow is based in the outpatient Department of Psychiatry and Behavioral Health. Supervised experience in assessment and treatment also occurs in the Child Development Center and at a psychiatric inpatient unit for adolescents. Both fellows receive training in the assessment and treatment of children and adolescents with a wide range of behavioral/emotional problems. Assessment procedures include psychological testing, behavioral questionnaires, diagnostic interviewing and collateral interviews. Interventions include individual therapy, parent guidance and family therapy. Fellows receive at least 3 hours of individual supervision per week, participate in weekly postdoctoral seminars and are encouraged to attend other conferences within the medical complex. The faculty utilize a variety of therapeutic approaches, but the prevailing approach is behavioral or cognitive-behavioral embedded in developmental and systematic understanding of the child. The fellowship is 2 Years due to the goals and milestones of the program. Please see our website's Outcomes Section to see the rationale for a 2 year fellowship. The goal of the program is to facilitate the development of professional psychologists with advanced skills in child and pediatric psychology to function independently in a variety of practice settings. Program information and application are available at <http://www3.marshfieldclinic.org/residents/?page=postdoctoral>

	2008-2009	2009-2010	2010-2011
Still a postdoctoral fellow		1	1
Veterans Affairs Medical Center	4	3	3
Private General Hospital			1

Program Description

The program operates within a scholar-practitioner model. There are six fellowship positions each with a specific area of concentration: one in Geropsychology, one in Palliative Care, one in Clinical Neuropsychology, one in Psychosocial Rehabilitation, one in Post-deployment Mental Health Services, and one in Women's Health. The Clinical Neuropsychology and Women's Health positions are two year appointments, with candidates selected in alternate years. There will be no Women's Health fellow selected for the 2013-2014 training year. Fellows will be prepared for psychological practice either with older adults, with patients with end-stage disease, with patients with neurobehavioral disorders and pathologies, with the seriously mentally ill, including those with co-morbid substance abuse, or with newly returning veterans, many of whom have suffered multiple physical and/or psychological injuries. While the training primarily occurs within the context of the delivery of psychological services, training needs always take priority over service needs. The objective of the fellowship program is to provide the environment and experience that will promote in-depth development in each area of concentration. Fellows are expected to demonstrate competence in the following broad areas: Bioethics/Professional Behavior, Theoretical Conceptual Skills, Psychological Assessment, Psychological Intervention, Consultation, Program Development and Evaluation, and Teaching/Supervision. Within each area of competence, sound clinical skill and judgment, an active knowledge of current research, and an ability to teach and communicate well with clients and other professionals are required. The fellowship program is organized around a core of clinical experiences, but allows some flexibility in pursuing individual goals. While there are sometimes opportunities to conduct research during the fellowship, the major emphasis is on clinical practice.
